Milo D. Campbell was the first to announce his candidacy. He was invited to become a candidate by the federated committee of the Grange, Gleaners' and Farmers' Clubs, and was promised the support of those organzations. It was a conspicuous case of the office seeking the man. C. S. Mott claims to have likewise been urged into the race by his friends. Both he and Campbell are now among the active contenders for the job. Nearly all the other gentlemen mentioned have nourished gubernatorial ambitions for years, and if they ared efeated they will not be in a position to lay the blame upon their friends as their candidacies are believed to have been largely self-inspired.

It is not the purpose of The Business Farmer to even discuss the claims put forth by seven of the eight candidates in behalf of their respective candidacies. We do not concede that the defeat of any one of these men will be a "blow" to the Commonwealth, nor will victory insure everlasting glory. Each of the candidates has some peculiar quality which commends him for the job, and possibly each possesses some shortcoming which might be used against his aspirations. So far as The Business Farmer and its readers as concerned there will be no microscopic examinations made of the various candidates in an effort to pick out their flaws and hold them up to public view. So far as the farmers are concerned the issues involved in the coming primaries and the points of difference between the respective condidates are clean cut and easily comprehended.

Milo Campbell has been called the "farmer candidate." Some of his enemies have taken exception to this on the ground that Mr. Campbell is not a practical farmer. Nevertheless that name is correct in the sense that he is the "candidate of the farmers," and received an endorsement from the farmers such as was never before given to a prospective political candidate in Michigan. He did not seek to be a candidate. Although he knew that the federated committee of the farm organizations intended to endorse a man for Governor; knew, moreover, that he was considered among several others, he employed no influence whatsoever to sway the impartial judgments of the members on the committee. On the contrary, when asked an opinion as to the fitness of another prospective candidate for the endorsement of the farm organizations, Milo Campbell replied that he considered him a good man and would support him in every way should he enter the race and receive the approval of the farm organizations.

The question has been asked why the farm organizations have endorsed a man for Governor who is not a practical farmer, but the answer to that is to merely refer the question to the record that Mr. Campbell has made during the past few years in farm organization work. Not all of the men who have done the biggest things for the farming business have been practical farmers. It was as a result of their being brought into contact wth other businesses and other people that they were able to be of service to agriculture. The trouble with many men who leave the ranks of the farmers for greater service in other fields is that they lose the farm touch. Milo Campbell was born on a farm, worked on a farm and earned his way all through life. But although his work has taken him far afield from farming at times, he has never forgotten the needs of the farmer, nor been so occupied with other matters that he did not have the time to devote to agricultural problems when opportunity presented. It was in recognition of what Milo Campbell has actually accomplished for the farming business that the farm organizations have given him their unqualified endorsement.

It is no exaggeration to say that Milo Campbell is the choice of 90 per cent of the farmers of Michigan. Fifty per cent of the farmers of Michigan can nominate him providing every man and woman of them go to the polls and vote. But they cannot nominate him by staying home. Let the farmer who wants to see a man elected Governor of Michigan who has shown by his deeds that his heart is with the farming business,—let every such farmer make up his mnd to go to the polls no matter what may tempt him to stay at home,—and Milo Campbell is as good as elected.

It Is to Laugh

IT IS TO laugh to mention the State Constabulary. Here are a couple hundred ablebodied men who could do good servce at manual labor on farms or in the factories frittering away their time and the people's money chasing mangy and unlicensed dogs down the highways and searching for imaginary desperadoes in the orchards.

The fellow who originated that scribble about the constabulary "protecting" the orchards must be strangely lacking in a sense of humor. We feel that it would be a reflection upon the intelligence of our readers to dwell upon the humanly impossible task of a half dozen troopers protecting the thousands of orchards in the several fruit growing counties of the state, when a man's innate common sense tells him that to effectively patrol the fruit regions would require a force ten thousand strong.

Employing the state constabulary for such nonsensical purposes as checking up unlicensed dogs and patrollig pneaceful rural districts is nothing but a sop to the farmers. The fellows who are responsible for the existence of this military force are trying desperately hard to keep it busy in the apparent interest of the two strongest classes of people in the state, the farmers and the industrial concerns. The major opposition to the Constabulary when the bill creating it was up and since have been the farmers, and the politicians who were smooth enough to foist such a military machine onto the state think they are smooth enough to blind the people to its utter uselessness.

No, sir, the state Constabulary was never created to chase cats and dogs and apple burglars. The immediate object of the bill was to give someone a job and reward political friends. The second was to create a political machine. The Constabulary has admirably fulfilled its mission in these respects so why not give it an honorable discharge and have an end to the expensive farce.

Land Values

THE NEWSPAPERS of the city are still trying to make the farmer out a lucky dog because of the increase in land values. Citing statistics which never existed only in his imagination a certain newspaper editor attempts to show that land values have increased in quite a "get-rich quick" fashion the last several years, thereby adding to the farmer's bank account. At least he says: "Who got this increase in value," and answers his own question by saying "the farmer's." One might be led to believe that when a farm is sold at ten per cent more than a neighboring farm was sold a year previous that all the farms in the vicinity promptly yield up a crop of gold representing their increased "value." Whatever opinions city newspaper editors may have upon this score our observation convinces us that nothing of that kind happens. In fact, we have yet to learn of a single instance where the increase in land values even added one whit to the productive fertility of the soil of neighboring farms.

Speculation of real estate firms have had more to do with increasing farm land values than anything else. The fact that the trend of population has been steadily for years from the farm to the city should appeal to an intelligent man as evidence enough that it is not always the value of the products which a piece of land can grow that determines its market value. An increase of adjoining land values if of no benefit to another farmer unless he sells his farm. And if every farmer whom these increases in land values are supposed to benefit should place his farm upon the market values would take a sudden drop and no one would benefit.

Increase in land values cannot be taken as an infallble gauge of farm prosperity. Speculation, coupled with an abnormal demand for farm products, may jump farm realty values ten per cent this year, only to be succeeded by a year of low prices, with more farms for sale than there are buyers. It is, therefore, foolish to talk about the farmers "getting" increases in land values. For they do not.

The Harvest Is On

THERE IS music in the air. The clickety-clack of the binder and the swish-swash of falling grain are heard from the fields hard by. A month ago green bonneted grain rippled there in the breeze; yesterday it glowed in the sun like unburnished copper; today nothing remains but an ugly stubble.

The harvest is on. From north to south and east to west the farmers are gathering in the grain. Here the harvest is good; there is is poor. Here it will yield a fair profit; there it may scarcely be worth the cutting. But that is always the way. It will always be the way. The soil will always vary in its fertility; the seed in its vitality; the elements in their moods; and man in his habits and methods of farming. And these are the quartet of factors that enter into the making of a crop.

Well, says Hiram, I worried my head off over an early frost last spring; calculated for sure that we were going to have a drought this month; knew for a certainty that the oat crop was going to be a failure; and bet my last Canadian quarter that hogs would take a drop with corn. None of them things happened, but I'll be hanged if I can help worrying about what the future is going to bring forth. Life is sure just one worry a chasin' another.

"Be good for something," was the text of a sermon which a lawyer preached at a banquet I attended last evening. Rich or poor, homely or handsome, strong or weak, ignorant or educated,—the man who is "good for something" creates a survival value which lives long after he is dead. Some day I am going to preach a sermon on that same text.

In refusing to become the presidential nominee of the prohibition party Mr. Bryan again reveals that depth of character which has gained for him the love and admiration of millions of his fellow-men. The sincere and spontaneous homage that is paid to Mr. Bryan would lead a lesser man into seeking presidential honors under almost any political standard. Mr. Bryan is an old man now in year, but active, alert, and courageous as ever. He will live out his remaining years as he has lived those which have gone before—rendering his nation and his fellow-men a far greater service as a private citizen than he could possibly render them in an official capacity.

What the Neighbors Say

AS VIEWED BY A RENTER

I am a reader of your valuable paper and have noticed the articles about keeping the boys and girls on the farm. I think that it is impossible to do this as most of them can go to the city and get their eight dollars a day and they are sure of it every day. I don't see anything to keep me and my family from going to the city. I am an experienced farmer, but I cannot make any money here on this farm.

We lived in the city nine years and made and saved more money than I ever did on the farm. There are lots of others in the same boat that I am in. When you go to rent a farm everyone wants more rent than the value of the products you sell off the farm. I tried to get a good farm this spring but they asked too much rent. I am glad that I did not rent the high-priced ones as I could not have made my rent from them this year. The farm I am living on is not much of a farm and I knew it when I moved on, but we do not like city life, but we are going to the city this winter if we do not find a good farm to work where there is a chance to make some money. I have my own help to work a farm of eighty acres. We are going out to work in haying and harvest as it doesn't take us long to take care of our own. We have about thirty-five acres of crops in.

Please print this in THE BUSINESS FARMER for this is one of the reasons why men are leaving their farms. We can go to the city and work a little over half the time we put in on the farm and save as much as we can here. We know what we are talking about from experience. If a man hasn't enough money to buy a farm he has no business on it.—*Wm. Daniells, Winegar, Mich.*

I am going to make a prediction. You will not go to the city. In the first place there isn't the demand today for city laborers that there was six months ago, and unless financial and transportation conditions become very much improved during the next six months, which is very doubtful you are going to see some industries closed down and men thrown out of employment. In the second place you are going to see a back to the farm movement. It has already started. It is going slowly. You men who are on farms today are going to thank your lucky stars a year from today that you know how to farm and despite the long hours and risks and meagre returns you will not be willing to exchange places with the workman in the stifling shops of the city. It's a long, hard pull, I know for a renter on an average farm to get things coming his way. It takes perseverance and courage to hang on when the old machine is slipping and sliding backward and there are rocks below, but other men have escaped a wreck and eventually climbed the hill, and so can you!—Editor.

THE PATRIOTISM OF CATHOLICS

In the last two issues of your paper there has appeared in the "What the Neighbors Say" column what was meant to be an argument in favor of abolishing the parochial schools. While I am willing to listen to anyone who will argue sanely and intelligently still I call their contributions, the one a veiled and the latest an open insult to anyone of the Catholic faith.

Why does not Mr. R. F. Lamb practice a little of that Americanism he so rants about? Does he not know that the Constitution of this great United States grants religious liberty of conscience to anyone and that no religious test shall be asked as a qualification for any office? Does he not know that the winning essay on "What are the Benefits to be Derived from an Enlistment in the Navy," was from a scholar, the product of the parochial schools? He and his kind will say that a Catholic cannot be patriotic but how does he account for the fact that with Catholics numbering only about eighteen per cent of the population, the number in the army and navy numbered between thirty and forty per cent Catholic in the late war. In our town of Richmond two out of the five killed or maimed in battle were Catholics. They were good enough to fight and die for Mr. Lamb and his kind but now his family and friends must be insulted just because they are Catholics and believe that the time to teach religion is when we are young. Why will he not go and inspect the parochial schools before making accusations, for I claim and contend that they will rank and grade as high in all branches of the public school. The late war was to end all fighting and discord among nations, shall we now start a religious war of hate and biggotry? God forbid. I would advise these mis-guided persons to read what the leading men of this state and other states among them Ex-Governor Ferris have to say about this proposed amendment. I am sure that we have enough fair-minded people to defeat such a measure that would bring hatred strife and discord when now of all times all must pull together to save our country from the horrid aftermath of war.—*Joseph Lueck, Richmond, Mich.*

DON'T BLAME THE BOYS FOR GOING TO CITY

I have been a reader of your paper for some time. Will say it is the best business paper printed.

I have read in your columns several ideas in regard to the farm and the farmer let me tell you right here now if things don't pay out this year there will be one less farmer in the U. S. to raise feed and then go to the bank and borrow money to pay taxes with. I have a farm that is worth $10,000 producing about three thousand dollars worth of foodstuff a year and by the time I pay the expenses I have no interest on the money whatever. You may think this strange but its true talk about the young men going to the city. Can you blame them? They are getting better pay, shorter hours and easier work. I would go there myself if I were in their position. Anybody would be a fool that wouldn't. Some day somebody is going to wake up hungry. The farmers have endured this no-profit business for the past five years with the promise of better next year. Sugar 34 cents a pound and wheat $2.50 a bushel go good together doesn't it? If I don't make any money this year my farm is not going to operate next year. I am going to put a lock on my gates and go to the city myself. I am going to let my farm stay right where it is. I guess it won't run away and if I get starved out after while in the city I can come back at any time. I have been a farmer all my life except three years which I spent in the city. I have worked at everything from bell boy up and I never made my property farming.

What can a man do that is in debt for his farm? Ask any one that is in that position and see what they say now in regard to the farm situation. I will tell you how I think it should be. Guarantee the farmers a profit for his work and interest on his money he has invested and he will do the rest. I have enough to keep me if I don't farm but I like farming, like to work in the fields better than any place on earth. The country is a nice place to live, a good place to bring up your children, the best place in the world for health and happiness but when a man has to run his hand down in his pocket after working fifteen hours a day it's time to quit. I lived in Detroit in the winter of 1907—couldn't get a job at any price but I think that was nothing to what is coming. The price of farm produce is high enough if other stuff was down where it ought to be a farmer would get rich but every time farm stuff goes up a cent other goods goes up a dollar. Now I am not writing you this because the present situation is hurting me any but to give you my idea. Believe me if this dog eat dog keeps up somebody is going to be hungry.—*A. Reader, Clinton County.*

No, we cannot blame the country boys for going to the city. But like the prodigal son many of them will come back. High wages, short hours and easy work sounds good but when they get there, especially young men who are married, and find houses $75 to $150 a month, potatoes $7 and $8 per bushel and other eatables in like proportion, little if any garden, no pure air, streets noisy night and day, and every way you turn some expense, it doesn't look as well as it sounded. If you take a day off to go to the county fair or fishing you don't lose your job or a day's pay, do you? Not on your life. You are your own boss. I know something about this subject, brother, as I farmed in central Michigan 22 years, and have worked several years in Detroit. I think you must have wrote your letter on a rainy day from the stand you take. Of course the farmer has been misrepresented and walked over for centuries, but any far-sighted person will tell you the day is not far distant when "Reuben" will come into his own. Cheer up brother and point the corners of your mouth the other way—it isn't going to rain forever.—Associate Editor.

CATHOLIC SCHOOL DON'T TEACH BEHIND CLOSED DOORS

I have never written to the Neighbors' Page yet, but after reading the article written by J. B., Kent Co., in a recent M. B. F. on parochial school amendment, I can't keep still.

I went to a Catholic school five years and if he says that they teach behind closed doors, "Lord knows what,' he tells a lie outright. Anybody is welcome to visit our school and see what is going on and excepting fifteen minutes study on religion in the morning, he would see the same routine of study as in any public school. Why don't J. B. go and see what is going on behind said closed doors before he comes to the brainless conclusion that they are teaching Bolshevism? I think the Bolshevists of this country are those Godless, weak-minded creatures who are trying to put religion out of the way. With God and religion knocked in the head it will be an easy matter to put law and order out of business, so as to be free to do as they like—no law to interfere with their doings. He further says we pay thousands of dollars to send Bolshevists to Russia. Well, I think if we spent a few more thousands to send these Godless, weak-minded creatures to Hades, this grand free America of ours would be a much grander place to live in than it is today. Let these fellows have their way and this country won't be much better than Russia, because it will cease to be a free country. We have been readers of M. B. F. since it existed and it is the best there is.—*Mrs. J. M., Clinton County.*

ATTORNEY GENERAL SHOWS CONSIDERABLE AUTHORITY

As there is some agitation thru the papers in regard to the proposed amendment on parochial schools, I would like to say a word or two, being in a position to speak from personal observation, or in other words, "been through the mill." For many years the Catholic denomination has conducted parochial schools and also later on Lutherans and Seven Day Adventists, until it has become a great factor in educational lines. Why is it, and for what purpose do these religious people carry on a system contrary to the public school? Simply to catchism their respective children in the faith of their fathers, keeping them in ignorance of outside worldly education, which has a tendency to develop the pupil in a much broader development and not as a jug handle, all on one side. I heard a minister of the gospel say: "My children will have to meet the world as they find it, and will have to make a choice of religion for themselves. I will endeavor to give them the best I have at home and in church capacity, leaving the result with them." It is an old adage—"Education forms the mind, and as the twig is bent the tree inclines."

It is also true in a political way, boys follow in the political faiths of their dads. But not so much so now as in the past. If I am correctly informed, the Catholics are working to get their public school tax money, which they now pay, appropriated for their parochial schools, saving to them a double burden, as well as the other denominations which are involved.

It shows to a person looking on, that something is out of joint somewhere, either with them or with our public schools. Which is it? I believe it is with them. There is no real foundation for carrying on two separate systems. A child should come in contact with others, and not be like a potato plant grown in the shade. The plant must have sunlight which develops and brings forth results.

If the home and church can't hold their children in the faith, there is something lacking, instead of laying it to the public school. When did our great instructors get their education? Not in a parochial school by any means.

Behind the scenes there is an element brought to bear upon parochial pupils which virtually says: "I am right and you are wrong" in religious faith, causing a friction when the two elements meet. If there is not enough essential element in a church denomination to hold the young, and send them to the public school, then there is something which is lacking and which should be remedied if possible.

I am for religious liberty, as far as compelling a person to do this or that if it interferes with his religion or conscience. But the church school is a side issue to the church. If the public school teachers error these good people should by voice and vote help to make conditions better instead of letting things go by year after year.

I think that the Attorney General has usurped considerable responsibility in denying citizens the right to petition according to the Constitution. It smacks of one man power, which we have had enough of for some little time past. If the voters don't want the amendment, vote it down, but a little airing upon the question pro and con will be of importance to the welfare of all concerned.

Any system, whether religious or political that will not stand when investigated is made of shoddy goods. I have often wondered why we as a so called Christian nation do not read portions of Scripture in the public schools.

There are thousands of pupils who do not attend any church or school and could not tell whether Acts was in the old or the new testament.—*F. H. Carpenter.*

THE FOOD YOU EAT

Prices for farm products, on the farms are today practically stationary, compared with prices one year ago.

But—

Wholesale prices for food, in the cities, have increased 34 per cent and retail prices for 12 leading food groups have increased 50 per cent in the same period.

You are paying more for the food you eat, but the farmer who grows that food isn't getting one cent of that increase.

Who is getting it? The speculator, the storage plant, the holder of foods, the jobber, the commissionman, the retailer, all the long line of middlemen. They are pocketing the proceeds. That is why—

1.—There is a shortage of farm labor which in turn makes for less food in the near future, and—

2.—Your cost of living has risen so abnormally high.

Co-operation, a direct transportation from a producing group to a consuming group, appears the best, quickest and most easily arrived-at solution.—*Detroit Times.*

(Note: When the editor of THE BUSINESS FARMER was asked at a meeting of the Wayne County Fair Price Committee last fall, how he would lessen the spread between producer and consumer, he suggested the exact remedy in almost the exact words as presented above.)

EDITED BY CLARE NORRIS

CLOTHING FOR A GIRL THIRTEEN TO SIXTEEN

CLOTHING for a girl from thirteen to sixteen is a topic to be treated quite differently from the same theme a generation ago. Then mothers were married against allowing their daughters to wear their clothing tight or heavy; corsets which drew in the waist line, or long, full skirts hanging from the waist. Now, we rail instead, against the scanty attire which the girl depends upon to protect her from the winter's cold. Skirts so short and scant, no petticoats can be crowded under them, stocking and waists so thin that real underwear would show through and cannot be worn, neck lines low in winter, shoes also low except for the heels. What, then, would the dress reformer suggest, who used to demand weight hung from the shoulders, and room for the lungs to expand? Lightweight, warm undergarments, not necessarily woolen, for winter; the knitted gauze for summer as requiring no ironing and plenty for all seasons, to allow for frequent laundering, low comfortable, light weight, properly-fitted corset or corset waist, fresh, simple, muslin corset covers or combinations not over-trimmed with useless ribbon bows, and dresses, the one-piece, loose, becoming sort, to be found in profusion for both winter and summer wear. Sensible, flatheeled, "growing-girl" shoes, by all means, and a good quality, for it is no economy to buy poor shoes. Stockings should be sensible too, good quality lisle or cotton, rather than the thin, second-rate silk hose, which develop ladder-runs on the first wearing. It may be hard to induce a girl of this age to adopt the former when most of her mates are allowed to wear the latter every day, but even if the family pocketbook allows a better quality of silk, she should be reminded that she is setting a standard to which less fortunate girls cannot attain. Hats and outer garments should be plain and young. What need of apeing older peoples' styles when such becoming things are fashioned for girls? Keep them young, with simple, pretty, suitable, unexpensive wardrobes and we cannot go far astray.

PIN MONEY

THIS TIME it is the humble dandelion, which we dig from our lawns with infinite pains that promises to be a money-maker for those who would earn just a little or even quite a little pin money. Now don't smile—it's not dandelion wine I am about to suggest! But just good old fashioned dandelion greens which have come into favor more and more, until in some places in the south they are now raising whole fields of dandelions for the greens in early spring.

These are raised from the seed. Therefore the whole trick must be turned just when the dandelions go to seed. The heads are picked off and the seeds, after being dried, shaken out of the heads and these have a very good market value. It takes a lot of seed to make a pound, but a pound of seed sows a large field of dandelions.

Out in Washtenaw county, one of the University students got the idea and from an ad in the paper, secured the assistance of all the children in the county this summer, who assisted him in gathering a very large crop this year, and it is now predicted that other counties will take the work up another year and gather real gold from the sun-colored flowers which are the pest of farmers everywhere.

SEEN IN CITY SHOPS

SKIRTS ARE getting fuller—there is no doubt about it. The plaited skirt of plaid will be very popular for sport wear for late summer and early fall. And with it in place of a coat is worn a sweater of the darkest shade and, for instance, with a black and white plaid skirt, is worn a black sweater with a white blouse, while those who like the extreme wear white oxfords and black hose or a combination black leather and white linen oxford.

Moire silk bags are more favored for summer wear than the seal or heavier weight purses.

About the daintiest little summer furnishings I have seen this year were in the shape of dresser sets in tissue gingham. They were fashioned of the finest check in the desired color. For instance one woman who favors lavender had the dresser scarf and pin cushion of the finest check in the tissue gingham. They are made with tiny little ruffles around the edge with in turn are hemstitched and then cut to leave the edge. On the corner of this set was placed a tiny bunch of roses made of a dainty shade of pink. Very Frenchy and cool it looked indeed. Her white muslin curtains were held back with a bow of lavender wash ribbon of the same shade as this set. The pin cushion was made round and with the double ruffle around it, fastened with a double satin ribbon of rose pink and lavender.

Never before was organide so popular. At a local theatre the other evening I glimpsed a handsome gown of dark brown organdie—trimmed only with flat little ruffles of the material. And with it the pretty little girl wore a long piece of silk tulle of the same shade which was wrapped loosely around the throat just once and both ends allowed to extend down on her dress in front, where they fell nearly to the hem of her short skirt.

In one shop they were teaching little children to make doll clothes, and even the dolls dresses were being fashioned of the daintest of colors in organdie.

Weekly Cheer

There's a better time a-coming—
don't repine;
Life has much of bitter water in
its wine;
Play its most unnoticed part
With a white unflinching heart,
And of Duty make its most exalted shrine.

THE RECIPE FOR SUCCESS

By Berton Braley

It's doing your job the best you can
And being just to your fellow-man;
It's making money, but holding friends,
And staying true to your aims and ends;
It's figuring how and learning why
And looking forward and thinking high,
And dreaming a little and doing much;
It's keeping always in closest touch
With what is finest in worth and deed;
It's being thorough, yet making speed;
It's daring blithely the field of chance
While making labor a brave romance;
It's going onward despite defeat
And fighting staunchly but keeping sweet
It's being clean and it's playing fair;
It's laughing lightly at Dame Despair;
It's looking up at the stars above,
And drinking deeply of life and love;
It's struggling on with the will to win,
But taking loss with a cheerful grin;
It's sharing sorrow and work with mirth
And making better this good old earth;
It's serving, striving through strain and stress
It's doing your noblest—that's success!

DEAR CHILDREN: Here's a new mule story I heard the other day, and it is so good, I pass it on to you. Dr. Crane, who is a very famous story teller, says that in lots of ways lots of times, we might better be like the mule. Now we have never given the mule much credit for being of a disposition we might wish to imitate, but here is the way Dr. Crane puts it: He says that the reason we are always running down the mule is because he is stubborn—and that sometimes it is better to be able to just be stubborn, than to do too much. For instance, it's very easy to say "yes" when some of our playmates invite us to join them and play "just a little longer" when we know that mother has sent us on an errand and that she is in a hurry. Now if we would imitate the mule, we would be stubborn—would would tell them "no" which sometimes is harder to do than anything else we know of. To be like the mule we must simply "do nothing"—just be "mulish"—refuse to go—balk, if you please. And sometimes when there's a little temptation comes our way, it shows much more strength to do nothing than to go with the crowd. So let's remember the mule once in a while. After all, he has his good points.

This week we publish three more prize original drawings. Summer is just the time to take advantage of these prize offers and we are very glad indeed to award just as many prizes as are earned. Affectionately —AUNT CLARE.

OUR BOYS AND GIRLS

Dear Aunt Clare—I just finished reading the stories of the boys and girls and thought I would try and write too. I am 11 years old and in the sixth grade. I have two sisters. My teacher's name is Miss Crawford. I have one mile to go to school. We enjoy the M. B. F. very much. I live on a 120 acre farm. I am going to have a vacation in a few weeks. Rhea Watson, Hemlock, Mich, R 1.

Dear Aunt Clare—I seen my letter in print in the M. B. F. so thought I would write again. My school was out the 2nd of July, the last day of school we played game and ate ice cream, the three that won the most games got a prize. It soon will be time to pick raspberries and that means work for me. Next year I will be in the fifth grade at school. Well my letter is getting long so I guess I will close for this time. Helen Hasse, Ossineke, Mich.

Dear Aunt Clare—I wrote to you a week or so ago, but as I did not see it in print I thought I would try again. I am fourteen years of age and have light brown hair, grey eyes and I am gifted with a few freckles across the tip of my nose. I weigh about eighty-one pounds and am about four feet, six inches tall. I have two brothers and one sister. I like to read the Childrens page very much. Hoping to see my letter in print, I remain your little friend, Hazel Harpst, Alma, Mich, R 4.

Dear Aunt Clare—This is the second time I have written to you, so I thought I would write again. I am a girl 16 years old. I have three brothers and no sisters. For pets we have a dog and a cat. We take the M. B. F. and like it fine. I will close with a riddle:

I'm a strange contradiction, I'm new and I'm old;
I'm often in tatters and often decked in gold.
I'm always in black and I'm always in white;
I am grave and I'm gay, I am heavy and light.
In form, too, I differ,—I'm thick and I'm thin;
I've no flesh and no bone, yet I'm covered with skin.
I've more points than the compass, more stops than the flute;
I sing without voice, without speaking confute.
I'm English, I'm German I'm French and I'm Dutch.
Some love me too fondly, some slight me too much.
I often die soon, though I sometimes live ages,
And no monarch alive has so many pages. Ans.—A book.
—Clara Kotzke, Croswell, Mich., R 2.

"Hearts of Three"

By JACK LONDON

Author of the "Valley of the Moon," and other stories.

"THIS Senorita Leoncia," he said, finally, with sleepy suavity. "She is not your girl. She has other papa and mama."

But Enrico's present grief at her loss was too great to permit startlement at this explicit statement of an old secret.

"Yes," he nodded. "Though it is not known outside my family, I adopted her when she was a baby. It is strange that you should know this. But I am not interested in having you tell me what I have long since known. What I want to know now is: where is she now?"

Yi Poon gravely and sympathetically shook his head.

"That is different secret," he explained. "Maybe I find that secret. Then I sell it to you. But I have old secret. You do not know the name of the Senorita Leoncia's papa and mama. I know."

And old Enrico Solano could not hide his interest at the temptation of such information.

"Speak," he commanded. "Name the names, and prove them, and I shall reward."

"No," Yi Poon shook his head. "Very poor business. I no do business that way. You pay me I tell you. My secrets good secrets. I prove my secrets. You give me five hundred pesos and big expenses from Colon to San Antonio and back to Colon and I tell you name of papa and mama."

Enrico Solano bowed acquiescence and was just in the act of ordering Alesandro to go and fetch the money, when the quiet, spirit-subdued Indian maid created a diversion. Running into the room and up to Enrico as they had never seen her run before, she wrung her hands and wept so incoherently that they knew her paroxysm was of joy, not of sadness.

"The Senorita!" she was finally able to whisper hoarsely, as she indicated the side piazzo with a nod of head and glance of eyes. "The Senorita!"

And Yi Poon and his secret were forgotten. Enrico and his sons streamed out to the side piazzo to behold Leoncia and the Queen and the two Morgans, dropping dust-covered off the backs of riding mules recognizable as from the pastures of the mouth of the Gualaca River. At the same time two Indian man-servants, summoned by the maid, cleared the house and grounds of the fat Chinaman and his old crone of a companion.

"Come some other time," they told him. "Just now the Senor Solano is very importantly busy."

"Sure I come some other time," Yi Poon assured them pleasantly, without resentment and without betrayal of the disappointment that was his at his deal interrupted just ere the money was paid into his hand.

But he departed reluctantly. The place was good for his business. It was sprouting secrets. Never was there a riper harvest in Canaan out of which, sickle in hand, a husbandman was driven. Had it not been for the zealous Indian attendants, Yi Poon would have darted around the corner of the hacienda to note the newcomers. As it was, half way down the hill, finding the weight of the crone too fatiguing, he put into her the life and ability to carry her own weight a little farther by feeding her a double teaspoonful of brandy from his screw-top flask.

Enrico swept Leoncia off her mule, ere she could dismount, so passionately eager was he to fold her in his arms. For several minutes ensued naughte but noisy Latin affection as her brothers all strove to greet and embrace her at once. When they recollected themselves, Francis had already helped the Lady Who Dreams from her mount, and beside her, her hand in his, was waiting for recognition.

"This is my wife," Francis told Enrico. "I went into the Cordilleras after treasure and behold what I found. Was there ever better fortune?"

"And she sacrificed a great treasure herself," Leoncia murmured bravely.

"She was queen of a little kingdom," Francis added, with a grateful and admiring flash of eyes to Leoncia, who quickly added:

"And she saved all our lives by sacrificing her little kingdom in so doing."

And Leoncia, in an exaltation of generousness, put her arm around the Queen's waist, took her away from Francis, and led the way into the hacienda.

CHAPTER XXIII.

IN ALL the magnificence of medieval Spanish and New World costume such as was still affected by certain of the great haciendados of Panama, Torres rode along the beach road to the home of the Solanos. Running with him, at so easy a lope that it promised an extension that would outspeed the best of Torres' steed, was the great white hound that had followed him down the subterranean river. As Torres turned to take the winding road up the hill to the hacienda, he passed Yi Poon, who had paused to let the old crone gather strength. He merely noticed the strange couple as dirt of the common people. The hauteur that he put on with his magnificence of apparel forbade that he should betray any interest further than an unseeing glance.

But him Yi Poon noted with slant Oriental eyes that missed no details. And Yi Poon thought: He looks very rich. He is a friend of the Solanos. He rides to the house. He may even be a lover of the Senorita Leoncia—or a worsted rival for her love. In almost any case, he might be expected to buy the secret of the Senorita Leoncia's birth, and he certainly looks rich, most rich.

Inside the hacienda, assembled in the living room, were the returned adventurers and all the Solanos. The Queen taking her turn in piecing out the narrative of all that had occurred, with flashing eyes was denouncing Torres for his theft of the jewels and described his fall into the whirlpool before the onslaught of the hound, when Leoncia, at the window with Henry, uttered a sharp exclamation.

"Speak of the devil!" said Henry. "Here comes Torres himself."

"Me first!" Francis cried, doubling his fist and flexing his biceps significantly.

"No," decreed Leoncia. "He is a wonderful liar. He is a very wonderful liar, as we've all found out. Let us have some fun. He is dismounting now. Let the four of us disappear—Father!" With a wave of hand she indicated Enrico and all his sons. "You will sit around desolate over the loss of me. This scoundrel Torres will enter. You will be thirsty for information. He will tell you no one can guess what astounding lies about us. As for us, we'll hide behind the screen there.—come! All of you!"

And, catching the Queen by the hand and leading the way, with her eyes she commanded Francis and Henry to follow to the hiding place.

And Torres entered upon a scene of sorrow which had been so recently real that Enrico and his sons had no difficulty in acting it. Enrico started up from his chair in eagerness of welcome and sank weakly back. Torres caught the other's hand in both his own and manifested deep sympathy and could not speak from emotion.

"Alas!" he finally managed heartbrokenly. "They are dead. She is dead, your beautiful daughter, Leoncia. And the two Gringo Morgans are dead with her. As Ricardo there, must know, they died in the heart of the Maya Mountain.

"It is the home of mystery," he continued, after giving due time for the subsidence of the first violent outburst of Enrico's grief. "I was with them when they died. Had they followed my cousel, they would all have lived. But not even Leoncia would listen to the old friend of the Solanos. No, she must listen to the two Gringos. After incredible dangers I won my way out through the heart of the mountain, gazed down into the Valley of Lost Souls, and returned into the mountain to find them dying——"

Here, pursued by an Indian manservant, the white hound bounded into the room, trembling and whining in excitement as with its nose it quested the multitudinous scents of the room that advertised his mistress but before he could follow up to where the Queen was behind the screen, Torres caught him by the neck and turned him over to a couple of the Indian house-men to hold.

"Let the brute remain," said Torres. "I will tell you about him af-

THE SIGN OF ROWENA QUALITY

Successful Home Baking Requires High-grade Flour

The women who have had the greatest success in baking for the home always use the best flour they can get. They discover by experimenting which flour makes the best breed, biscuits, pastry, etc.

For nearly sixty years women have achieved reputations for their baking by using

Lily White

"The Flour the Best Cooks Use"

Look for the ROWENA trade-mark on the sack

There is a big difference in flour. The selection of wheat and the milling processes determine the quality. LILY WHITE is made from the choicest wheat grown in America. It has just the right balance—neither too hard nor too soft. Its color, texture and flavor are unexcelled. Only the choicest goodies from every kernel are used. Most mills clean and scour the grain twice and don't wash it at all. LILY WHITE grain is cleaned four times, scoured three times and then carefully washed before being run on the rolls for the first break. No flour is more scientifically milled to bring out all the nourishment, perfection of texture and color. LILY WHITE is of supreme quality. It bakes bread, biscuits and pastry of surpassing excellence. It has earned its reputation as "The flour the best cooks use," and is guaranteed to give complete satisfaction.

Ask for LILY WHITE at your dealer's.

MARKET FLASHES

TRADE AND MARKET REVIEW

..The money situation continues to be in a stringent condition and credit is hard to secure. Prices on commodities are pointed downward and the indications of summer increases seems to have disappeared. This is shown by the continuation of sales — especially on clothing — throughout the country; some stores staging these sales at a 50 per cent discount. The decline in prices has not only hit the United States but is being felt in England and France. France has a strong protection law which she keeps in force. This law keeps the importation of goods from another country down to a minimum but it is rumored that this law is soon to be lifted enough to allow the shipping in of goods of all kinds from Belgium and other certain countries. Another factor that keeps prices up in France is that the wholesalers and retail shopkeepers alike are better organized in that country than here in the States or in England. But with the raising of their protection law, or "protection decree," as it is called there, lower prices will be sure to follow.

Some market authorities are getting rather frightened over the appearance of the conditions in this country. A few even go as far as to believe there wil be a panic. But why should we have a panic? The results of a national survey, which was made public at the meeting of the National Association of Supervisors of State Banks at Seattle recently, shows state banks in a very healthy condition with good deposits and resources. Another official report shows that bankruptcies during the last year in the state of Michigan has decreased nearly 45 per cent over the year before. This may be a higher per cent of decrease in failures than all of the states would average, but figuring very conservatively you can safely say that the general average would show a large decrease rather than otherwise. Of course the public has got to stop spending as lavishly as they have been doing but they are realizing this and have been slowing down for the past few months as is shown by the large number of sales put on throughout the country. With the present indications we cannot see a panic.

The Labor Board has granted increased wages to railroad employees amounting to $600,000,000, and the public is to pay the bill. If freight rates are increased to handle this it will mean an increase of about 44 per cent according to unofficial estimates. However, shippers may not have to bear all of this expense as the railroads may increase passenger rates to handle part of it. The increase in wages, without question, will make better shipping facilities because the experienced men will again resume work, and more cars will be available for marketing the farmers' crops.

Crop prospects, especially in the big grain growing sections, are very good. Grain has been moving in fairly good volume. The Chamber of Commerce of the United States declares that this country will harvest 525,000,000 bushels of winter wheat and 290,000,000 bushels of spring wheat this year; that the corn crop looks fine; and that the apple crop will amount to 60,000 cars, worth not less than $72,000,000.

WHEAT ACTS SHAKY

No. 2 Mixed	2.22½		

The damage being done by the black rust in Northwestern wheat fields the past few weeks has been checked by the cool weather we have had the last few days, but it is thought that the crop is too far ahead now for the black rust to do much damage to the grain even should hot weather again appear within the next day or two. So much further damage from the rust is not expected. The checking of this arch enemy of wheat has had a tendency to weaken the market. A curtailing of the export demand the past week has also helped to work the market into a weaker condition. The United States has around 150,000,000 bushels of last year's wheat yet available for exportation and the harvesting of the 1920 crop is on. There is a good export market but according to reports, most of these nations must buy on credit, and Uncle Sam wants the cash as most of these countries already owe him large sums so he is, you might say, "all dressed up and no place to go." But some of these countries must be getting some money some way because there is an export demand in this country which at times plays a very strong part in making the prices. Europe is going to need considerable wheat between this fall and the first of the year. They are not paying much attention to the crop here but are very anxiously watching the progress of the wheat in Argentina and Australia as these two countries owe Europe considerable money and Europe can take grain in payment on the loans. These countries will not be able to supply all of Europe's needs, of course, and North America will have to furnish part, but it all depends on how large a yield these two countries have—if they have a small crop America will stand alone as an exporter.

CORN SHOWS WEAKNESS

CORN PRICES PER BU., JULY 27, 1920			
Grade	Detroit	Chicago	N. Y.

No. 3 Yellow	2.07	2.01	
No. 4 Yellow			

The strength shown in the corn market two weeks ago has caused slight advances in prices during the current week but at present the strength has been lost to all appearance, owing to favorable reports from growing districts and a tendency of dealers and speculators to sell heavily. The cool weather we have been having the past few days may hold the price of corn from going lower for a short time because corn needs hot weather right now. Many sections have been having considerable rain of late and if we cannot have some dry weather there will be a lot of soft corn this fall. One prominent crop authority says that unless the crop is badly damaged in the near future, that we will have the largest crop of corn this fall that was ever on record. Corn prices are expected to recede from now on for several months and the farmer that can sell in advance at least half of his 1920 crop is advised to do so.

OATS SLUMP

OAT PRICES PER BU., JULY 27, 1920			
Grade	Detroit	Chicago	N. Y.
No. 2 White	.98	.87	1.10
No. 3 White	.97	.85	
No. 4 White	.96

No. 3 White	.84½	.82¼	
No .4 White	.83½	.81½	

There is little to say about the oat market this week. This grain has been more sensitive to the changes during the past week, it appears than other grains and prices are slightly lower than those given on this page a week ago. Harvest is on in many states and they report that a good yield is expected but how big a yield will not be known until the threshing is done. Nearly all states report the crop in fine condition but straws short. Short straws will not hinder the production of a large crop. New oats are not expected to appear on the market until about the middle of August. Oats follow very closely the movement of corn and the prices will travel downward, it is believed, until about the first of the year.

LAST MINUTE WIRES

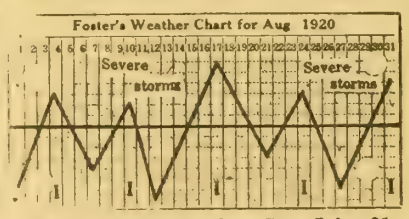
DETROIT — Wheat shows some strength but corn and oats continue downward. Beans dull. Cattle steady. Hogs active.

CHICAGO—All grains show weakness owing to heavy selling. Hogs lower. Cattle are steady to higher.

(Note: The above summarized wires are received AFTER the balance of the market page is set in type. They contain last minute information up to within one-half hour of going to press.—Editor.

THE WEATHER FOR THE WEEK

As Forecasted by W. T. Foster for The Michigan Business Farmer



WASHINGTON, D. C., July 31, 1920.—Warm waves will reach Vancouver B. C., about Aug. 2, 7 14, 21, and temperatures will rise on all the Pacific slope. They will cross crest of Rockies by close of August 3, 8, 14, 22; plains sections Aug. 4, 9 15, 23; meridian 90, upper great lakes, Ohio-Tennessee and lower Mississippi valleys Aug. 5, 10, 16, 24; lower great lakes and eastern sections Aug. 6, 11, 17, 25, reaching vicinity of Newfoundland about Aug. 7, 12, 18, 26. Storm waves will follow about one day behind warm waves, cool waves about one day behind storm waves.

During the period covered by these disturbances a great hot wave will cross the continent reaching meridian 90 not far from August 17. This will be much like the hot wave correctly predicted for near the middle of July. Hot winds may occur in some small sections in the middle west not far from Aug. 17.

I do not pretend to definitely locate hot winds, severe storms, tornadoes hurricanes. I can usually approximate their dates and thus give warnings. All these, except severe storms, are confined to certain large sections and the reader, by exercising intelligent judgment, may be benefitted. Severe storms are expected during the week centering on Aug. 11. During the week centering on Aug. 14 a tropical storm, or hurricane, is expected to organize on the Sargasso Sea which lies east of northeast of Cuba and about half way between northeast South America and of the Azores islands.

Another dangerous storm period will occur during the week centering on Aug. 25 and during that period severe storms are expected on the continent while the hurricane, moving slowly westward, will get into the Gulf of Mexico. I can not tell you any more about that expected hurricane. But very cool weather sometimes light frosts, occur in the middle northwest east of Rockies, while August hurricanes are moving through the Gulf of Mexico.

W. T. Foster

RYE LOWER

Rye on the Detroit market is easy and the price is $1.95 for No. 2. Dealers in the "Auto City" say there is no demand for rye. Exporting has been th main business in this grain the past several months. According to reports from Europe there will not be such a demand from now on as there has been considerable more of this grain planted in Europe than last year. Great Britain has sown rye very extensively and harvest is expected to begin this month. France and Denmark also expect big yields.

BEANS OFF AT DETROIT

BEAN PRICES PER CWT., JULY 27, 1920			
Grade	Detroit	Chicago	N. Y.
C. H. P.	6.90	7.50	8.25
Red Kidneys		16.00	17.50
PRICES ONE YEAR AGO			
Grade	Detroit	Chicago	N. Y.
C. H. P.	7.65		
Prime			
Red Kidneys			

Beans have slumped again on the Detroit market. This time it was a drop of 10c. Chicago reports a slow and easy market. New York market is quiet. The Bureau of Crop Estimates places the combined yield of the six largest bean states in the Union at 9,451,000 bushels. Market experts looking into the future of the bean market say that farmers that have some of their last year's beans should hold on and sit tight as better prices are in sight. Let's hope so, because so far the farmer has had the bad end of the breaks.

POTATOES TAKE DROP

SPUDS PER CWT., JULY 27, 1920		
	Sacked	Bulk
Detroit	5.60	
Chicago	5.28	
New York		4.51
Pittsburg		5.56
PRICES ONE YEAR AGO		
Detroit		
Chicago		
Pittsburg		
New York		

The bottom is dropping out of the potato market it appears. The price dropped on an average of $1 per bbl. practically every day during the week on the Chicago market. New York markets are suffering from oversupply and prices are rapidly going downward. Detroit also has a well loaded market and lower prices; in fact, all markets claim heavy receipts and reduced prices. Whether prices will go down to where they were a year ago is hard to tell, but the present indications look like prices are to recede. The west reports their crop is in fine condition and they are expecting a bumper yield. Government reports show the crop, with the exception of a few states, to be in excellent condition. Some states are estimating their yield to be around 150 per cent of that of 1919.

There is more hay arriving at terminal markets than can be readily absorbed as rail conditions are somewhat improved and a clean-up movement is under way. There will be more old hay carried over this year than usual and reports indicate that most of the hay that is still back is owned by dealers. The new crop is less than last year east of the Mississippi river but a large yield in the west will swell the hay crop to record figures. The tame hay harvest is nearly completed except for some late sections and some that

being delayed by lack of help. Much eedy hay is reported this season.—*ay Trade Journal.*

BOSTON WOOL MARKET

The Commercial Bulletin says:

"President Wood, of the American oolen Co., epitomizes the wool sitation when he says that the market awaiting the buyers. The market enerally is dull still and values are ore or less problematical. In the est the growers are either consigning eir wools against moderate advances r else are holding them, actual outght sales being few.

"Some openings of goods are being ade for the lightweight season by e mills, but no marked results are eported from these opening. The merican Woolen Co.'s resumption of peration is still uncertain."

LIVESTOCK MARKETS

(By H. H. Mack)

For more than two months, the Detroit cattle market has been swinging between grain and grass but, at ast, the jig is up and from now on, ntil Michigan cattle get much bet-er, cattle from the southwest will produce the larger part of the beef onsumed in Detroit and environs. Only those who are familiar with the laily trade in the Detroit live stock market realize how desperately poor has been the quality of the Michigan cattle that have been received at the local yards during the past month and the time has come when Detroit killers must have a certain number of better cattle to mix with local arrivals in order to meet the varied needs of their trade. Several loads of cattle from Kansas City were received in Detroit last week and killers report that the dressing percentages of these cattle are much better than from Michigan cattle costing the same price on the hoof.

The steers and heifers that are coming to Detroit from the west are very plain in general appearance but when their hides are off they show a much better covering of flesh than do the carcasses afforded by the grass cattle from our own state. Several carloads of bulls have been received in Detroit during the past week that cost $1 per cwt. less than Michigan bulls of the same grade. Bulls and common butcher cows must be bought very low in the country or they will lose money in the Detroit market. The local market has not been over-supplied with prime fat cows of late and this kind are holding their onw fairly well. Milch cows are dull and quiet, only the best grades of milkers finding a prompt sale at prices that are satisfactory to country shippers. Detroit has a splendid trade in veal calves all last week with a 19-dollar top; current supplies of prime calves are not nearly equal to the local demand.

Detroit's trade in sheep and lambs has been of very little importance for some weeks past; prices have held fairly steady for the most part with best lambs selling for $16. A study of western markets reveals a declining tendency in connection with all grades of sheep and lambs. Western range lambs are fully $1 per cwt. lower than on the middle of the current month and the edge seems to be off the demand for feeding stock. Wool continues in the rut of dullness and inactivity which has characterized the trade all thru the month of July. The fight between the farmers' wool pools of the country and the wool buyers, is on in good earnest, and it is hard to predict just where and when it will end.

The decision at the Spa conference which provides that the German coal miners to be provisioned by England and France, has had a marked effect on both the live hog and the general commodity market. The immediate consignment of large cargoes of meat and lard to European ports, which followed the announcement referred to above, has strengthened the situation and opened up a brighter outlook for the live hog and provision trade for the mid-summer and early fall months. York and medium weights are leading in demand but good heavy hogs are selling better than for a long time back. Pigs are in much better demand than formerly.

On Monday, July 26, the Detroit market opened with cattle and calves selling steady with the close of the week before. Sheep and lambs were dull and the latter $1 lower than the average of last week. Hogs were active and about level with last week's average. No strictly prime steers were on sale but had they been offered, $13 per cwt. would have been the price. Best bulls and cows $7 to $8. Thin little cattle and common butcher cows, $6 to $7. Canners and cutters, $4 to $4.50 and cutters at $5 per cwt. Best hogs, $16.50. Best calves, $19. Best lambs, $15.50.

DETROIT PRODUCE MARKET

Blackberries, $9@10 per bu.; Apples, $3.25@3.75 per hamper; huckleberries, $9@10 per bu.; black currants, $11@12 per bu.; gooseberries, $1@1.25 per 6-quart basket; raspberries, red, $13@14; black, $9.50@10 bu.; celery, Michigan, 25c@40c per doz.; dressed hogs, light, 18@20 heavy, 16@17c per lb.; dressed calves, best, 25@26c; ordinary, 20@23c per lb.; lettuce, head, $1.35@1.50 per case; hothouse, 10@15c per lb.

FARMER CANDIDATES FOR IMPORTANT PUBLIC OFFICES

(Continued from page 4)

the "Open Sunday Bill" to make all amusements legal on Sunday as on any other day; the Pari Mutual gambling bill to legalize betting on horse races (Sen. Scully took a leading part in the defeat of this measure.)

Sen. Scully has always been found ready to champion the needs of agriculture in legislative halls, and his entire public career will show that he has been a consistent and ardent defender of the farmers' rights. As lieutenant governor of Michigan he will have the power of appointing the committees of the Senate and will preside over that body. It is a position of honor and influence and in an agricultural state should go to a man of agricultural sympathies and understanding.

John C. Ketcham

John C. Ketcham who is out after the congressional toga in the Fourth district, needs no introduction to the readers of THE BUSINESS FARMER. As a mere matter of form, however, we will say that Mr. Ketcham is master of the Michigan State Grange and has been active all his life in agricultural affairs. His efforts to secure better prices and greater recognition for the bean and sugar beet growers are too well known to our readers to require description. No agricultural issue of any importance has not come up in recent years that has not found John Ketcham valiantly championing the farmers' cause. He is a keen thinker, a master of logic, and has no mean reputation as a platform orator. Moreover, and more important than all, his heart is in his work, and when that can be said of a man, his little mistakes can easily be overlooked.

The Fourth district comprises the counties of Allegan, Barry, Berrien, Cass, St. Joseph and VanBuren counties, all largely agricultural, it is mete and proper that the district should have a representative in Congress who knows the farmers and doesn't have to be punched up by the folks back home when legislation of interest to farmers is pending. There are five candidates for the job in the Fourth district, and John's chances look mighty good. There can be no doubt of his success if two-thirds of the farmers of the district will stick together and give him their votes. We know of lots of farmers in Michigan who would consider it an honor to vote for Mr. Ketcham and they will await the outcome of the contest in the Fourth district with a great deal of interest.

(This is the second of a series of articles on the farmers and farm representatives who are candidates this year for public officers. A third will appear in an early issue.—*Editor.*)

Why Insure in a Small Company?

—with insufficient surplus when you can insure in the largest exclusive mutual automobile insurance company in the world

In the winter of 1914 a law was passed by the State Legislature which provided for the organization of mutual automobile insurance companies. The men who prepared this law organized the CITIZENS' MUTUAL AUTOMOBILE INSURANCE CO., of Howell, Mich., taking out their license to do business August 27th, 1915. The Company grew rapidly. Within a few months a number of mutual companies were organized until now there are nine competing companies in the state.

One of these smaller companies had assets of $887.80; another had assets above liabilities of $88.14; a third had assets in excess of liabilities of $1273.55; while a fourth had a surplus of but $65.27 according to their statements of January 1st, 1920.

The careful automobile owner is anxious to insure with a company having sufficient surplus on hand to pay the big claims. During the month of April, the CITIZENS' MUTUAL AUTOMOBILE INSURANCE COMPANY of Howell paid one liability claim of $2,975.00, one fire claim of $2,975.00, a personal injury claim of $1,7500.00. The Company has never had to borrow a dollar and has always had sufficient surplus to pay its claims promptly.

THE STATEMENT OF THE COMPANY AS OF JULY 1, 1920, IS AS FOLLOWS:—

CLAIMS PAID

	Number	Amount
Since organization	3605	$474,991.24

THE COLLECTION BOX

CINCINNATI FIRM MAKES RIGHT

"About the middle of last November I sent to the Bond Shoe Makers, Cincinnati, O., for a pair of ladies shoes. The catalog No. was T606, the price $4.69. In two weeks' time I received the order and one shoe was larger than the other. Immediately I sent them back, at the same time ordering a pair of men's shoes.

The men's shoes came and were satisfactory but the others did not. I wrote a number of times to the company and they claimed they had no record of first order and they must have become confused. In each letter they told me to refer to order No. 32016. When they replied they asked me to be patient and soon all would be straightened out. But the matter finally dropped because I could get no satisfaction. If you can do anything for me I shall certainly feel indebted to you."—*W. A. W., Ionia County.*

This matter was taken up with the Bond Shoe Makers and we received a letter from them in which they stated they had discovered their mistake and would make a satisfactory adjustment. June 11th we received the following letter from our subscriber:

"Enclosed you will find letters sent to me by Bond Shoe Makers. I have received shoes referred to therein. I sent for dress shoes and they have sent me worse than plow shoes. It is an insult! At the time I ordered them the price for the shoes I wanted was $4.65 and in the same catalog there is a picture of what they have sent me the price of which is $3.95. From then until now the shoes I ordered have advanced in price to $6.85."—*W. A. W., Ionia County.*

We again wrote Bond Shoe Makers explaining to them their mistake. They answered that they would get in touch with Mr. W. A. W. and advise him. July 3rd we received the following letter from Mr. W. A. W.:

"As a result of your efforts in "bringing the Bond Shoe Makers to time" I have received the order I placed in their hands last November. I am indeed grateful to you for your assistance in this matter as I feel I never would have been able to do anything about it without your help. We shall never be without the M. B. F. hereafter. Again thanking you, I remain."—*W. A. W., Ionia Co.*

TROUBLE WITH SUBSCRIPTION

"Last March I sent for the Pictorial Review for one year through the Detroit Journal, as they advertised in their paper the Journal alone was $4 with $1.35 for the Pictorial Review, extra, our subscription had been extended to the Journal O. K. but they, so far, have failed to send the other or reply to any one of five letters written, three to the Journal and two to the Pictorial Review. Last time I ask them to begin my subscription to the Pictorial Review with the July number but if they don't I want it to begin with August. I don't want any back numbers. I have paid for a years subscription to it and I want it for a year from the date of first issue I receive. I sent a check for the full amount and it has been returned a long time, so they received the money all right. We have taken your paper since last January and think it is a fine paper. Everything for the farmers and they are everything."—*Mrs. L. A. B., Highland, Mich., June 29th.*

"I received the first number of my Pictorial Review a few days after waiting three months since I ordered it through the Detroit Journal. Thanks to you for what you did."—*Mrs. L. A. B., July 16th.*

ADJUSTMENT OF TIRES

"On Sept. 1st, I ordered two tires from the Everwear Tire & Rubber Co., Chicago. I am enclosing copies of correspondence with them, which is explanatory of our dealing. I purchased the two tires at a cost of $14.65 express and cost, and paid out $3.91 for the replacement, a total of $18.56 for which I received service of about 2,000 miles. Now at this time I could have purchased any one of several standard makes for $18.00 with guarantee of 5,000 to 7,000 miles and these people would have backed up their guarantee. My last letter of May 24 was not answered. Now I would like to place the matter in your hands and ask you if after reading their ad and letter of April 23 whether I am entitled to any refund, and if so, will your claim department try to get it for me. Thanking you for whatever you can do for me, I am"—*R. E. L., Fenwick, Mich.*

This complaint was referred to the Everwear Tire & Rubber Co., with the request that they live up to the letter of their advertising. The following reply was received on July 3rd:

"Replying to your letter of recent date, with reference to a complaint from Mr. L—, Fenwick, Michigan, wish to advise you that we have written to Mr. L— to have his tire returned to us and we will adjust same for him. Trusting that same is satisfactory to you, and regretting that this occurred, we are"—*Everwear Tire & Rubber Co., Inc., Chicago.*

CHICAGO CONCERN SETTLES SUBSCRIBER'S COMPLAINT

"On April 20th I sent an order to Chicago Mail Order Co. for goods amounting to $7.46 and received part of the goods and still have $4.49 due. They keep telling me that my goods will be delivered in a few days and if not to send them an exact copy of my order which I have done two or three times and still my goods do not come. Can you do anything about it?"—*Mrs. A. N., Middleton, Mich., June 30th.*

This firm wrote to our subscriber on July 14th, ten days after receiving the complaint, as follows:

"We are pleased to inform you upon referring to our records that we forwarded you the merchandise that you wanted on July 7th and you should have received it by this time. The amount of the merchandise was $4.49 and we feel certain that this will adjust the matter to your entire satisfaction. Should you fail to receive the merchandise, kindly write us and we will be glad to trace it for you."—*Chicago Mail Order Co.*

"Received the goods today from the Chicago Mail Order Co. that I wrote you about last week. I think I would not have gotten anything from them if you had not gotten after them. I thank you for your prompt service and if there are any charges let me know and I will pay them."—*Mrs. A. N., July 9th.*

There are no charges.—*Editor.*

VEGETABLE GROWERS' ASSOCIATION OF AMERICA

The Vegetable Growers' Association of America will hold its twelfth annual convention at Columbus, Ohio, August 25th to 28th inclusive.

This organization is made up of some of the most progressive gardeners in the United States and Canada. A good program has been arranged which will include side trips and entertainment. There will also be a trade exhibit held in connection with the meeting. Both will be held in the Horticultural Building of the Ohio State University; headquarters will be at the Southern Hotel.

Any gardeners who can possibly get away from home for this meeting will find it well worth their while. It combines an opportunity to have a brief vacation with a period of contact with co-workers and a chance to get posted on the latest developments along various lines affecting the industry.

Anyone wishing to reserve rooms in a private home should write Professor L. M. Montgomery, Ohio State University, Columbus, Ohio, and and those wishing to receive a copy of the program should write Samuel W. Severance, Sec'y Louisville, Kentucky, care of the Market Growers' Journal. Anyone interested in making a trade exhibit should write C. W. Waid, East Lansing, Michigan.

Genuine Aspirin

Name "Bayer" means genuine
Say "Bayer"—Insist!

BAYER

Say "Bayer" when buying Aspirin. Then you are sure of getting true "Bayer Tablets of Aspirin"—genuine Aspirin proved safe by millions and prescribed by physicians for over twenty years. Accept only an unbroken "Bayer package" which contains proper directions to relieve Headache, Toothache, Earache, Neuralgia, Rheumatism, Colds and Pain. Handy tin boxes of 12 tablets cost few cents. Druggists also sell larger "Bayer packages." Aspirin is trade mark of Bayer Manufacture Monoaceticacidester of Salicylicacid.

Your Wife Will Know

Pure-Breds for South America

WHEN THE agricultural editors met in Washington each was handed an illustrated booklet printed in a foreign language. Since no farm paper editor is supposed to be conversant with any but his native tongue, it was explained that the booklet was printed in Spanish and that its object was to familiarize the people of the Spanish speaking states of South America with the advantages of pure-bred live stock and the ability of their North American neighbors to supply them with the best there is.

For several years back cattle breeders of South America have been straying into the United States and picking up some of our choice pure-breds. In fact, if we recall correctly some Michigan pure-breds have found their way into South America during the past two years. As a result of this interest the Bureau of Markets sent two live stock commissioners, Mr. David Harrell and Mr. J. P. Morgan to South America last year to promote trade in pure-bred stock. Reports were published on the pure-bred live stock situation in Brazil, Uruguay, Paraguay and Argentine. Sale of pure-bred stock to South America amounting to about $400,000 have been made during the last six months, largely through contracts established last year.

"The field is so promising," says the Bureau of Markets, "that two more live stock commissioners, Mr. L. B. Burk and Mr. E. Z. Russell, have recently sailed for South America to follow up the work of last year, make new contracts, and develop the market for all breeds of pure-bred live stock. To carry on this work, the Bureau of Markets is considering the establishment of a permanent office in South America in charge of an agricultural commissioner.

"It has been found," continued the report, "that visitors and prospective buyers from other countries, while probably appreciating the fact that excellent pure-bred live stock could be secured in the United States, were at a loss as to how to proceed to locate the kind of individuals wanted in the shortest length of time and with the least expense. Also foreign buyers, unacquainted with any person or agency in whom they could place confidence, felt so much the necessity of observing caution that they did not experience the satisfaction in attempting purchases here that they could have, had they been assured that differences in custom and trade practice were fully understood.

"The United States Department of Agriculture desires to aid foreign buyers and to assure them that it is organized to afford them all possible protection by placing at their command its service and facilities. This service is furnished upon request and without expense.

"Upon application to the Bureau of Markets of the Department of Agriculture, persons contemplating purchases of live stock in the United States will be aided by its experts in locating and forming proper contacts with individual breeders or breeders' associations with whom they may deal. Also expert advice will be given by the Bureau of Animal Industry of the Department as to ways of dealing with problems relating to the care and inspection of livestock. As to the extent of the Department's facilities for aiding purchasers, outside of Washington there are in various parts of the United States approximately 17,000 representatives of the Department of Agriculture in close touch with farmers and breeders. These representatives are available to render personal assistance when desired."

"HEARTS OF THREE"

(*Continued from page* 9)

terward. But first look at this." He pulled forth a handful of gems. "I knocked on the doors of the dead, and, behold, the Maya treasure is mine. I am the richest man in Panama, in all the Americas. I shall be powerful——"

"But you were with my daughter when she died," Enrico interrupted to sob. "Had she no word for me?"

"Yes," Torres sobbed back, genuinely affected by the death-scene of his fancy. "She died with your name on her lips. Her last words were——"

But, with bulging eyes, he failed to complete his sentence for he was watching Henry and Leoncia, in the most natural, casual manner in the world stroll down the room immersed in quiet conversation. Not noticing Torres, they crossed over to the window still deep in talk.

"You were telling me her last words were . . . .?"" Enrico prompted him.

"I . . . I have lied to you," Torres stammered, while he sparred for time in which to get himself out of the scrape. "I was confident that they were as good as dead and would never find their way to the world again. And I thought to soften the blow to you, Senor Solano, by telling what I am confident would be her last words were she dying. Also, this man Francis, whom you have elected to like. I though it better for you to believe him dead than to know him for the Gringo cur he is."

Here the hound barked joyfully at the screen, giving the two Indians all they could do to hold him back. But Torres instead of suspecting, blundered on to his fate.

"In the Valley there is a silly, weak demented creature who pretends to read the future by magic. An altogether atrocious and blood thirsty female is she. I am not denying that in physical beauty she is beautiful. For beautiful she is, as a centipede is beautiful to those who think centipedes are beautiful. You see what has happened. She has sent Henry and Leoncia out of the Valley by some secret way while Francis has elected to remain there with her in sin—for sin it is, since there exists in the valley no Catholic priest to make their relation lawful. Oh, not that Francis is infatuated with the terrible creature. But he is infatuated with a paltry treasure the creature possesses. And this is the Gringo Francis you have welcomed into the bosom of your family, the slimy snake of a Gringo Francis who has even dared to sully the fair Leoncia by casting upon her the looks of a lover. Oh, I know of what I speak I have seen——"

A joyous outburst from the hound drowned his voice, and he beheld Francis and the Queen, as deep in conversation as the two who had preceded them, walk down the room. The Queen pauser to caress the hound, who stood so tall against her that his forepaws on her shoulders, elevated his head above hers; while Torres licked his suddenly dry lips and vainly cudgeled his brains for some fresh lie with which to extricate himself from the impossible situation.

Enrico Solano was the first to break down in mirth. All his sons joined him, while tears of sheer delight welled out of his eyes.

"I could have married her myself," Torres sneered malignantly. "She begged me on her knees.

"And now," said Francis, "I shall save you all a dirty job by throwing him out."

But Henry, advancing swiftly, asserted:

"I like dirty jobs equally. And this is a dirty job particularly to my liking."

Both the Morgans were about to fall on Torres, when the Queen held up her hand.

"First," she said, "let him return to me from there in his belt, the dagger he stole from me."

"Ah," said Enrico when this had been accomplished. "Should he not also return to you, lovely lady, the gems he filched?"

Torres did not hesitate. Dipping into his pocket, he laid a handful of the jewels on the table. Enrico glanced at the Queen, who merely waited expectantly.

"More," said Enrico.

And three more of the beautiful uncut stones Torres added to the others on the table.

"Would you search me like a common pickpocket?" he demanded in frantic indignation, turning both trousers' pockets emptily inside out.

"Me," said Francis.

(*Continued next week*)

Feed Every 3rd Hog FREE

Save feed and get your hogs ready for market in less time. Prove at our risk that you can save fully one third your feed, making it possible to feed every third hog free by feeding

Milkoline At 2c a Gallon

Milkoline has a base of pasteurized and sterilized, modified Buttermilk. It is guaranteed not to contain any sulphuric acid or anything of an injurious nature to hogs or poultry.

Aids Digestion: Thousands of the most successful hog raisers from New York to California during the past seven years have proved that Milkoline helps and assists digestion, tending to insure perfect assimilation of feed. It helps tone up the system so that hogs are less subject to disease, and practically insures gains of 2½ pounds per head per day.

University Tested Professor W. B. Combs while Ass't. Prof. of Dairy Husbandry at Missouri University conducted a scientific test on Milkoline and found that Milkoline fed hogs put on more weight and showed 82.57% more profit than hogs not fed Milkoline. W. H. Graham a successful feeder of Middletown, Mo., said $30 worth of Milkoline made him an extra profit of $420. Lee Jackson of Wappingers Falls, N. Y., says Milkoline fixed up a bunch of shoats in fine style and is great for brood sows.

Can't Spoil: Milkoline is guaranteed not to rot, sour or mould. It will keep indefinitely in any climate. Flies do not come near it. It is always uniform, and is guaranteed to make you money or it doesn't cost you anything.

—*Distributed by*—

Schwartz Bros., Saginaw, Mich.

2c a Gallon Milkoline comes in condensed form, and you do the diluting on your own farm. When fed as directed Milkoline mixture (one part Milkoline to 50 parts water or swill) costs only 2c a gallon. Full feeding directions free. It is shipped in convenient kegs and barrels which we supply free. The prices are as follows: 5 gal. $7.50; 10 gal. $12.50; 15 gal. $16.50; 82 gal. $32.00; 55 gal. $19.50. It pays to buy in barrel lots because you save 60c a gal. over the 5 gal. quantities.

30-Day Guaranteed Trial. You are safe in ordering any quantity of Milkoline today. Feed one half the shipment to your hogs and poultry in a thirty day test, then if you aren't entirely satisfied return the unused part to us at our expense and we'll immediately refund every cent you paid us. We are so confident that you will find Milkoline the best money maker on the farm that the S. W. Boulevard Bank of Kansas City substantiates this offer. You are the sole judge. Send money order, or check, to us or our nearest dealer and we will ship immediately. Our booklet, "How to Hustle Heavy Hogs to Market" will be sent free on request—your name on a card will do.

CATTLE

HOLSTEIN-FRIESIAN

Facts in BLACK & WHITE

The Dairy Division at Washington Says:

"As the production of a cow is doubled profits increase three times. As production is trebled profits increase six times.

"The average cow in the United States yields 1823 quarts of milk yielding 207 pounds of butter a year. Average profit per cow $20 over cost of feed."

The average production of all pure-bred Holsteins that have been officially tested for a year is 629 pounds of butter from more than 7000 quarts of milk.

In yielding more than three times as much as the scrub cow, the pure-bred Holstein yields six times the profits.

As production is tripled profits increase six times.

PROSPECTUS

Covering an Issue of Preferred Stock Offered in and by

THE RURAL PUBLISHING COMPANY

(A Michigan Corporation)
Incorporated 1910
Mt. Clemens

TO A VERY limited number, considering the upwards of a hundred thousand friends of THE MICHIGAN BUSINESS FARMER, on the farms of this great agricultural empire, we are offering, subject to prior sale, a preferred interest in the company which founded and has piloted this weekly up to the present time.

Our reasons for taking in this additional capital at this time will be readily understood by you, our friends who have followed this weekly and the work it has set out to accomplish for the farming business.

NEW BUILDING—The building at 54-58 North Avenue, Mt. Clemens, which we have occupied in part since 1916, became the property of this company through purchase on contract covering a period of seven years, in May, 1920. This will give us facilities for the storage of roll paper stock in several months advance of our needs, allow ample and light work rooms for our printing departments and ample office space for editorial, advertising and circulation departments. It will allow us to develop, if we so desire, an extensive job printing department in connection with our publication work for which we already have the necessary machinery.

PAPER CONTRACT—We are extremely fortunate in having closed at the beginning of this year with the largest paper makers in America, from whom we have purchased for several years our roll stock in car-load lots, an advantageous contract which will guarantee us an adequate supply of this precious material. We have on hand at this writing a very large quantity of good quality paper stock none of which cost within 50 per cent of what it is worth on the market to-day. This paper has tied up an amount of our capital and credit which we must secure from some other source if we are to continue to take advantage of the contract we have.

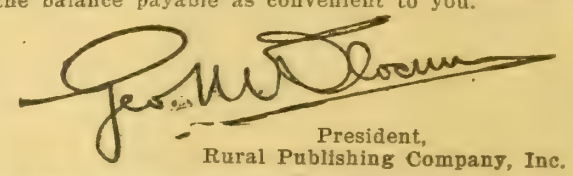
RAPID PROGRESS—You are familiar with the rapid progress which this weekly has made since its founding, as an independent weekly in 1917. The strength of a publication is measured exactly by the number of its loyal friends and we will leave it for you to judge the present circulation or "good-will" value of THE MICHIGAN BUSINESS FARMER. It has not been easy sledding over these war years with a new paper, but our advertising receipts for the first six months of 1920, were just 50 per cent in advance of last year, while our circulation receipts for the same period showed a gain of 26 per cent, or a net gain from all sources over 1919, of 34 per cent. The net earnings for this period amounting to more than the total net earnings from the first issue in 1917 to the end of December, 1919.

A DOUBLE INVESTMENT—While we know that your investigation of our balance sheet and your knowledge of the growth of our business, will justify your confidence in this preferred stock issue which we offer at this time, we want you to feel too, that you are makng a double-investment. THE MICHIGAN BUSINESS FARMER is more than a business without a soul or a purpose, it is an institution which we dedicated from its first issue to "the needs of ALL the farmers of Michigan!" It has no creed, nor politics, sponsors no single farmers' organization but believes in ALL that are working for his welfare. Particularly have we tried to be the friend of those who needed help or encouragement. We have never run from the fight in the farmers' behalf or hesitated a moment between the right and the wrong path. So when we lay before you, our friends, who have stood by this weekly during the first trying years this opportunity to help put it well over-the-top, we hope you will know that you are not only making a good investment for your money, but giving a boost to a Michigan institution working a service for this state, the value of which you are best able to judge.

THE PRESENT OFFERING—From all the above you might take it that we had several hundred thousand dollars to raise. As a matter of fact, we need just TWENTY-FIVE THOUSAND DOLLARS ($25,000), which we have decided to issue as a Preferred Stock, paying Eight per cent (8%) semi-annually or cumulative if any dividend is passed. The preferred stock is a prior claim to all dividends and to the business and property itself, over the common stock and the dividends of 8 per cent per annum MUST be paid in full on the preferred stock before the common stockholders can secure one penny in dividends. It must be redeemed by the company on June 2nd, 1940 at par. The company, however, believing that it will desire to retire this preferred stock after a few years, reserves the right to buy it back at a premium of 50c per share or 5 per cent premium on a share of $10 par value, after three years from date of issue. This means that if the company at the end of even five years should decide to buy back this preferred stock, they would have to pay you $10 per share, plus accumulated dividends at the rate of 8 per cent per annum, plus 5 per cent or 50c per share, which would, if bought back within a five year period amount to 9 per cent per annum on your investment.

SAFETY IN PREFERRED STOCK—The interest in the building, machinery, office equipment and paper stock of the company is to-day appraised in value at $45,000, or nearly double the entire amount of this preferred stock issue. This does not take into consideration nor attach any value to the circulation and good will of the publication, THE MICHIGAN BUSINESS FARMER, its franchises branch offices and advertising contracts, which, as you can imagine are very valuable and would sell as a going-business at a high figure. It is on all the property of the company that this $25,000 has a prior lien over the common stock and when it is understood that the common stock is owned by the publisher, editor and those actively interested in the direction of the company's business, it is obvious that the management will always be so conducted that neither the preferred nor common stock will be in jeopardy.

A CLOSING WORD—We hope to have only friends and readers of long-standing among those fortunate enough to get a block of this stock issue. We hope that it will be scattered into every county in Michigan. For this reason we will sell it in blocks of ten shares or more at $10 per share, while it lasts. Send 10 per cent of the amount with your order, or $1 for each share you wish to purchase, the balance payable as convenient to you.



President,
Rural Publishing Company, Inc.

NOTE—Only two hundred and fifty of our readers could avail themselves of this 8% preferred stock. If each took our minimum allotment of not less than $100 or ten shares to a person. It is certain that some of our readers will want one or more thousand dollars worth, **SO THIS WILL IN ALL PROBABILITY BE THE ONLY PUBLIC PROSPECTUS OF THE SALE OF THIS SECURITY**, therefore if you want any of it, please send the coupon order form below **TO-DAY**! "First come, first served," so if the stock is all gone before your reservation order is received, we will return your order with our thanks immediately.

RESERVATION ORDER FOR 8% PREFERRED STOCK

.....1920

Mr. George M. Slocum, President,
THE RURAL PUBLISHING COMPANY, INCORPORATED,
Mt. Clemens, Mich.

If not already sold, please reserve for me.....shares of Eight Per Cent (8%) Preferred stock in the Rural Publishing Company, at Ten Dollars ($10) per share.

Payment to be arranged for on a mutually satisfactory basis, when allotment of stock is made to me, otherwise this reservation order does not obligate me in any way.

Signed .....

MICHIGAN JERSEY CATTLE CLUB

The annual summer meeting of the Michigan Jersey Cattle Club will be held at the Agricultural College, East Lansing, on August 11, 1920.

This will be a big day for all lovers of the "Fawns." The program promises to be one of the liveliest and most enthusiastic ever "pulled off" by the Club. Fellow Michigan Breeders! August 11th will be your day. If you stay at home, it will do you very little good. By spending it at East Lansing you will help yourself and every other Jersey breeder, because you will thereby boost the Jersey cow; and "boosting" the Jersey cow is one of the most honorable works that man has ever been endowed with the privilege of doing. Doing good deeds is the essence of life. Do not miss this opportunity. Come and enjoy a whole day of Jersey enthusiasm. It will lengthen your life and make the balance of your days more worth while. Check the date, August 11th, on your calendar.—*Alfred Henrickson, Sec'y-Treas., Michigan Jersey Cattle Club.*

FARMERS' CLUBS PICNIC

The state Farmers' Clubs picnic will be held Aug. 7th at the M. A. C. East Lansing in connection with the meeting given by the College on that date. Program will be furnished by the College and will be along educational lines to the farmer. Everyone is invited. We ask that the various farmers' clubs bring out a big delegation of members and non-members. A picnic dinner and business meeting at the noon hour. You who have visited the college come again. You who have never been there take this opportunity of doing so.—*C. Gordon, president, J. W. Carlton, Vice-Pres., Mrs. S. R. Holmes, Sec.-Treas.*

Farm Organizations War on Grain Gamblers

Michigan Meeting of Farm Bureau Representatives Urges Farmer Control of National Marketing

REPRESENTATIVES of farm bureaus of Ohio, Illinois, Indiana, Minnesota, Nebraska, South Dakota, Kansas, Missouri and Iowa rubbed elbows with the Michigan State Farm Bureau officers last week at Lansing and discussed a program of action which if carried out will revolutionize the marketing of all farm products.

The conference was aroused to great enthusiasm by Aaron Sapiro, attorney for a dozen or more cooperative organizations in California, and who according to an agricultural writer, "is so saturated with co-operation that if you stick a pin in him a certain amount of co-operation oozes out." Sapiro was the gentleman who spoke in behalf of the bean growers' committee who went to Washington last fall to ask for a special tariff on beans. At that time he made a presentation of the bean growers' case which Claud Kitchin, former Democratic minority leader, said was the best of any that had been made before the committee. Sapiro has spent his years studying co-operative law, organizing co-operative associations and defending them in the courts.

At both the Chicago and Lansing meetings of farm bureau men Sapiro revealed some of his views on a national marketing organization controlled by farmers. He said:

"The big speculative grain companies have representatives in every grain producing country in the world. They gather information for their own use. They give out only such portions as may help them win the particular gambling operation in hand. You county elevator managers sell on this colored information that the speculators give you."

"In the 226 pages of testimony before the congressional hearings on the price of wheat there is not a word from any grain grower. Here is a statement by J. Ralph Pickell, saying that Australia has 250,000,000 bushels for export. President Gates of the California Board of Trade, in his infinite superior wisdom guesses that Australia has 210,000,000 bushels to export. Congressman Haugen has figures to show that it will be 45,000,000 and along comes Julius Barnes and says they are all too high. Mr. Gates poses as a prophet, statistician and economist all at once, but if his reputation is to be estimated from these statements he is not worth two cents on the dollar.

"The Board of Trade is absolutely unnecessary. Ye gods, why should a co-operative elevator association want a seat on a gambling exchange? We do not need to fight the board of trade. We can just quietly take away its customers.

"Here is the way to do it, based on our successful California experience. In the first place, we must cooperate on the American plan and not on the English Rochdale plan. We must organize by commodity and not by locality. We must have a grain marketing association in every grain producing state, organized without capital stock, because no capital stock is necessary. The local and terminal elevators should be owned by a separate corporation, organized on the co-operative principle and with both common and preferred stock. The common stock should be held by the marketing company, so as to give it the voting power in the elevator company. The preferred stock will have no voting power, and can be sold to anyone.

"The elevator company will do no marketing. It will simply do the mechanical work of handling the grain and charge enough to cover the cost of the service. The marketing company must have a definite contract with at least 51 per cent of the grain growers in the state, turning over to it for five years all the surplus grain grown by these farmers. The marketing company is then ready to do business.

The Same Price to All

"All grain should be pooled by grade and variety, and all growers should share equally in the proceeds. For instance, when all the No. 1 Northern spring wheat is sold and the expenses paid, each farmer who furnished wheat of that grade will be paid his share of the proceeds. The price per bushed will be exactly the same to each grower. That is true co-operation. As it is now, one grower gets $2.20, one $2.30, and one $2.40. When the co-operative elevator completes its year's business it declares a pro rata dividend, but the man who sold at $2.40 gets just as much as the one who sold at $2.20. That is the English Rochdale plan, but it is not true American co-operation.

"The grower will be given a certain agreed advance on his grain as soon as it is delivered to the elevator. In all probability, this advance will be greater than the entire price he receives now. The elevator company will issue warehouse receipts to the marketing company, and with these warehouse receipts, which will be bankable all over the world, all the money necessary to finance the advances can be obtained.

"If possible, the plan should be carried a step farther. A national marketing company should be formed. Each state company should have one man on the board of directors of the national company and one additional for each 50,000 bushels of grain under contract. The state companies will then contract to furnish their grain to the national company, which will do the actual marketing.

"I would have the national company set the price of grain, taking into consideration the cost of production and world supply and demand. It will control enough grain so that it can make its price effective. I would have the interests of the public protected by including on the board of directors with full voting power, representatives of the U. S. Department of Agriculture and the Federal Trade Commission. You never heard of the Armour Grain Company or the United States Steel Corporation doing that, did you?

"But the farmers will have absolutely nothing to cover up. They want only a fair honest profit and a stable market. The public can't object to that. There are no legal objections to the plan I have suggested and no laws need be changed to put it into operation.

"In case of overproduction in any year, it will be necessary to store some and perhaps to cut the acreage the following year. Much can be done in founding new markets. China, India and Japan hardly know what wheat is. An advertising expert told me that by spending half a million dollars in advertising, he could increase the world consumption of wheat 100,000,000 bushels a year.

"The national marketing company will need to have departments of transportation, statistics, grading and warehousing, each in charge of the best expert that can be hired. The collection of statistics is especially important. The directors of our fruit exchanges on the Pacific coast, for instance, know more about all conditions affecting the supply and demand of their commodities than any other group of human beings in the world."

What California Did

Sapiro drives home his grain marketing plan by quoting the experience of the California fruit growers. The raisin industry was in a bad way in 1909, when there were more foreclosures than in the entire period from 1911 to 1920. They organized along the line suggested for the grain growers and now the directors meet, says Sapiro, not to accept a price from the board of trade, but to fix their own price. They pay their marketing director $30,000 a year, and he has run the raisin speculators out of California.

"The 1911 raisin crop was sold at about 2 1-2 cents a pound—less than the cost of production. The association sold the entire 1912 crop and 20,000 pounds carryover from the preceding year at 3 1-2 cents, and in one year changed the raisin industry from the sickest to the most prosperous in the United States.

"This and the other co-operative marketing associations in California have brought unheard-of prosperity to the farmers of California," says Sapiro. "They have made the University of California the second largest in the United States. They have made possible splendid farm homes, and farm living on the 1920 scale. Bankers and business men are all back of the farmers' companies, for they, too, profit by the farmers' prosperity.

"The thing to do with your grain marketing problem is to appoint a committee to work out a definite plan. Then take six months for educational propaganda. The whole machinery can be set up in time to handle the crop of 1922—to merchandise grain instead of dumping it. Give this plan one year and good night board of trade."

National Wool Pool

President Howard of the American Farm Bureau Federation announced that development of a wool pooling system, similar to the centralized system established in Michigan and a few other mid-western states this year, on a scale that will embrace practically all of the large wool producing states another year would be pushed vigorously as part of the national organization's program. Unity in extensive advocation of the merits of the "truth in fabric" bill now before congress, which provides for the compulsory labeling by manufacturers of the percentage of shoddy in cloth was agreed upon.

The seed department of the Michigan Bureau, with its features of protection for individual farmers in guaranteeing quality goods was looked upon with favor and representatives of several states went home determined to establish machinery that would operate similarly in their territories. The Michigan department handles no seeds that are not guaranteed as to quality, and arrangements are effective in the majority of the organized counties in the state whereby each county takes care of the home demand with home grown seeds, calling upon the state department only for extra supplies. The plan also provides for the marketing of each county's surplusage of seed through the state department. In the purchase of west alfalfa and clover, considerable of which is being done this year the original grower is called upon to guarantee the quality of his product by affidavit.

Tidewater Project

That the mid-west, agriculturally at least, is solidly in back of the proposed Great Lakes-St. Lawrence to the sea waterway movement was indicated by the reception given the description of the plan by Charles P. Craig of Duluth, secretary of the national association, which is urging this development. Craig pointed out how millions of dollars may be saved farmers of the mid-west in handling of grain if the commodity may be loaded in ocean carriers at Great Lakes ports and moved directly to foreign marts, eliminating the present long and expensive railroad haul from the mid-west to the ports on the Atlantic seaboard. He predicted that the favorable sentiment prevailing in his counry and in Canada will make possible the securing of appropriations that will permit the starting of the development work on the waterway in 1922.

Upon motion of President Leonard of the Illinois Agricultural Association the meeting endorsed the action taken at the recent grain producers' conference held in Chicago and voted to support President Howard in his selection of a committee representative of all grain producing sections that will study conditions with a view to working out ways and means for the unification of grain marketing methods in vogue in different states.

It was with interest that the meeting learned from Mr. Howard that the American Farm Bureau Federation is assisting in the launching of state membership campaigns in Florida, Texas, Arkansas, New Jersey and Vermont, of a similar nature to the campaign that in less than a year has enrolled more than 75,000 members on a $10.00 a year basis in Michigan.

"Get Into Politics" Urges State Farm Bureau

ALTHOUGH the Michigan State Farm Bureau is not in politics, it has something to say on the subject, and it is something that is of much interest to the urban population of the state as it is to the 75,000 farmers who are members of the bureau. The state has been circularized and the farmers urged not to neglect voting at the August primaries. The advice follows:

"Presidential, congressional and general state election is just ahead of us and the results of it are bound to have a vital influence on national and state policies for sometime to come. Numerous candidates are in the field—some worthwhile and some not so good. It is not the purpose of the farm bureau, with its thousands of members, to interest itself especially in drawing lines between these candidates, as their own constituents, if they exercise their privilege of the ballot, and with a knowledge of their personalities and qualifications, can do this better than the farm bureau or any other organization.

"But unless these aforesaid constituents are keenly alive to their duty, the farm bureau will be seriously handicapped in its attempts, along whatever lines they may be, to secure enactment of amendatory or new legislation that will be of agricultural benefit or worthwhile from the viewpoint of the common weal.

"The results of the election will be largely indicated at the state primaries, which are now just a month off, and with this fact in mind, it is the advice of the farm bureau of Michigan that every effort possible be made to have the thousands of farmers of the state go to the polls en masse and cast an intelligent vote based on their own good judgment."

Uncle Sam's Hired Men Who Serve the Farmers

An Organizer of a Nation-Wide System of Education and Research in Agriculture and Home Economics is Dr. A. C. True, Director of the States Relation Service

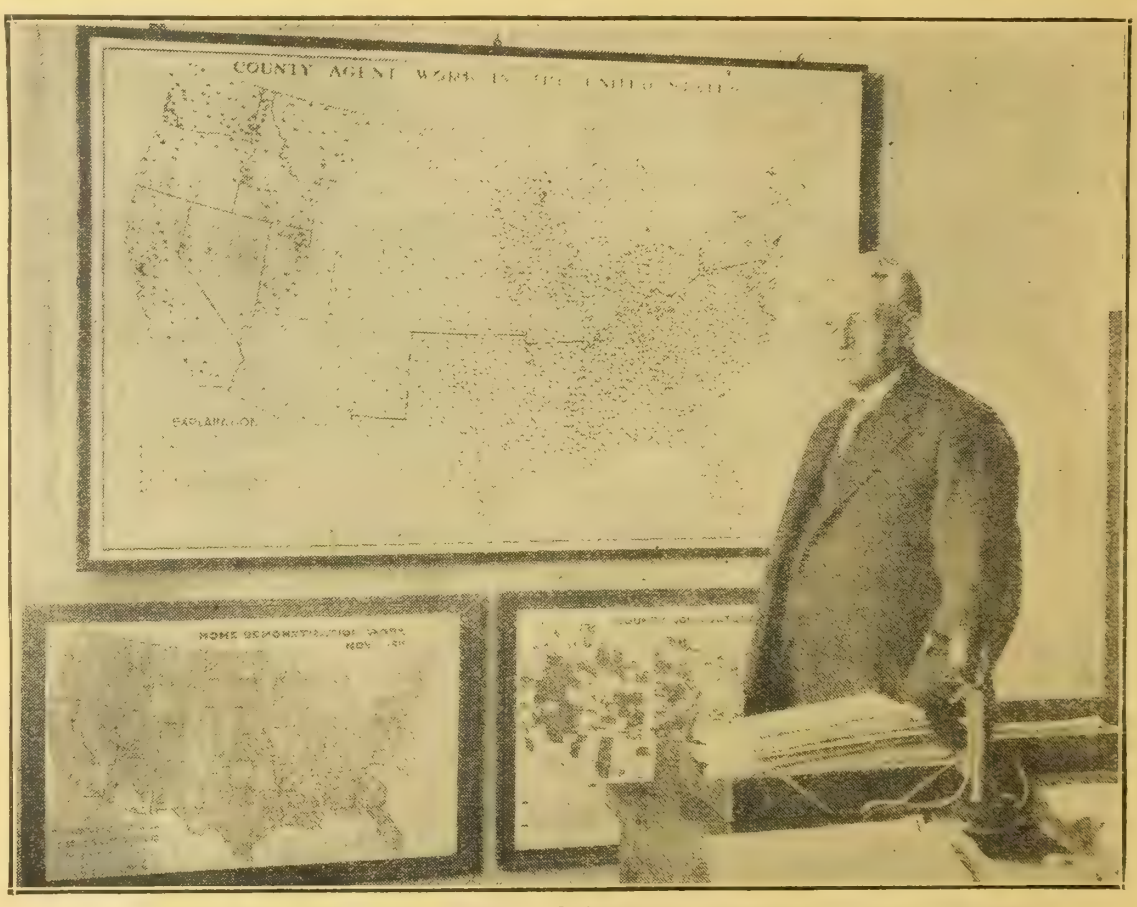
By CAPT. H. P. SHELDON

THIS is the second of a series of articles this publication is running, in co-operation with the U. S. Department of Agriculture, to acquaint our readers with the type of men who are making possible the wonderful service the department is rendering and stands ready to render our readers that those not now availing themselves of these services may do so.—Editor.

"A GREAT winner of battles." That was the description I had of the man and the search for him took me to the very top story of a gray office building in Washington. I wanted to see this warrior—this man who fought the battle of the farm boy and farm girl, the farm woman, and the farmer himself. Quite naturally, I expected to find a typical fighter, a man lean of frame and strong of jaw; a man of steady eye and brief, curt address. But when a door opened and I stepped into the office of Dr. A. C. True, Director of the States Relations Service, United States Department of Agriculture, I met a man who had none of those marks which denote the warrior—excepting, perhaps, the eyes, which were steady and direct in their gaze. The man looked more like a scholar than a fighter; yet I had another's word for it that he was a winner of battles.

But was that all that my informant had said on the subject? Wasn't there another phrase? Oh, yes! "He wins the battles without fighting them!" That was the rest of the sentence; the qualifying statement that helped me to reconcile this scholarly appearing man with his reputation of accomplishment. "Winning battles without fighting them!" Strategy instead of force of arms. Didn't a great general say that more battles are won by marching than fighting? Haven't history's greatest soldiers been scholarly men? I began to understand.

Dr. True is not a fighter in the sense of plunging against obstacles; rather he is a diplomat and wins his point by clearing away the trouble-making barriers. He has great faith in common counsel, mutual understanding, and broad-minded co-operation. In the days when Dr. True was beginning the task that was to be his life work he was often met by strong, sincere opposition from men or from organizations. When this occurred, did he rave and rant and antagonize? Indeed, he did not! He gave his opponent credit for a sincerity equalling his own, and then set about to find why their "minds did not meet," as the lawyers would put it. Nine times out of ten he found the obstacle, nine times out of ten it was only the confusion of two minds striving for the same worthy goal, but approaching along different paths, and nine times out of ten he succeeded in clearing the misunderstanding away and enlisting the support of his one-time opponent In the great cause for which he worked—the elevation of agriculture to its true rank as a profession, and the enlisting of effective co-operation of all worthy forces to this end.



Dr. A. C. True, Director, States Relations Service, U. S. Department of Agriculture, in his office at Washington.

Dr. True was educated at Wesleyan University, graduating from that institution in 1873. He attended Harvard University from 1882 to 1884. His education was classical and scientific, though it proved to be admirably adapted for the service he was to perform. His interest in agriculture came later, when the establishment of agricultural experiment stations and the development of the land-grant colleges opened the door to professional training in agriculture. Dr. True's work, after he left college, was that of teaching, but he was soon called to Washington to organize and edit the Experiment Station Record, which is now recognized as the most complete review of scientific investigation in agriculture in the world. This was in 1889, and from that time on Dr. True's effort was directed toward organizing and establishing agricultural research on a sound scientific basis, putting agricultural subjects in pedagogical form—shaping the science of agriculture so that it could be more effectively taught in American colleges and schools—and making agriculture a recognized, honored, and useful profession.

"Judge a carpenter by his chips" is a homely way of stating the great truth that a man must be judged by the work he has done. Dr True has heaped his bench with the right sort of chips. His tool has been the Office of Experiment Stations and its enlarged successor, the States Relations Service of the Department of Agriculture, and here are some of the finished products turned out by this bureau under his direction.

It has helped greatly to bring about the present system of agricultural experiment stations, which is "unsurpassed in the world for its efficiency and practical usefulness to agriculture."

It has been influential in putting the subject matter of agriculture and home economics in teachable form for the use of agricultural colleges and lower schools.

It has helped the masses of farm people, who could not go to college, through the educational extension work in agriculture and home economics carried out by the county agricultural agents, home demonstration agents, club leaders, specialists, farm bureaus, and publications.

A widespread revival of the production and conservation, by canning and other means, of fruits and vegetables for home consumption is a notable achievement of the extension workers of the service.

Alaska owes its agricultural awakening to the service, and hardy cereals and vegetables are now grown within a comparatively short distance of the Arctic Circle.

The agriculture of our insular possessions—Hawaii, Porto Rico, Guam and the Virgin Islands—is also being developed and made more nearly self-sustaining by the work of the service.

It has made important contributions to the scientific and practical knowledge of the economical and efficient use of the products of agriculture and to the subject of home economics in general through its investigations relating to foods, diet, clothing and household equipment, work and management.

To the inquiring person, Dr. True will probably emphasize especially the contribution of the States Relations Service toward making the science of agriculture an accepted course in American educational institutions, but you will find many men high up in farming affairs who hold this accomplishment second to that of organizing and developing station work under the Hatch and Adams Acts, or the co-operative extension work in agriculture and home economics under the Smith-Lever Act. In the latter case there was a new idea in agricultural education to be tried out on a broad scale. If it should prove successful the extension system promised to be the most intimate and effective means for carrying precise and specific information to the farm people.

Thanks to the efficient organization which was built up, the extension system did work, and it worked so well that in the years since the first county agent went out to his work the number of county agents, home demonstration agents, club leaders and extension specialists engaged in extension work has increased to about 5,000 specially trained men and women—the infantry of the Department of Agriculture and the state agricultural colleges; the live, intimate, friendly personalities who help the farmer and the farmer's wife, as well as the boys and girls of the farm, in their daily battle with farm problems.

The idea of service to the farmer is the motive back of every projects of the Dept. of Agriculture is expressed by the States Relations Service, mostly in terms of agricultural and home demonstration agents—"men and women county agents." The department aims to have one each of these useful citizens in every county in the United States. At present, the score shows one-third of the total number of counties supplied with both, one-third with men agents only, and one-third with none at all. The battle is not yet won—there is still much to be done in the way of organizing the co-operative forces throughout the country, and training men and women for the very exacting work of the profession, but the Doctor is steadily scoring his quiet victories, and he will win for his idea, if there is any virtue in straight thinking, clear vision and unwavering faith in the cause he advocates.

Dr. True's relations and recreations are what one might suppose them to be—travel, trout fishing and botanizing. He loves to spend his vacation in the beautiful Champlain country of Vermont, where he finds ample opportunity to indulge in his pastimes. His Vermont neighbors remember instances when, with the hay out, and a summer storm approaching, they have welcomed the appearance of the scholarly volunteer and his pitchfork. In these tasks as well as in the greater work of the office he holds in the Department of Agriculture, Dr. True has been as loyal in nature as he is True in name.

WORK OF STATES RELATIONS SERVICE

THE States Relations Service represents the Secretary of Agriculture in his relations with the State agricultural colleges and experiment stations, under the acts of Congress granting funds to these institutions for agricultural experiment stations and co-operative extension work in agriculture and home economics; in carrying out the provisions of acts of Congress making appropriations to the department for farmers' co-operative demonstration work, investigations relating to agricultural schools, farmers' institutes, and home economics, and the maintenance of agricultural experiment stations in Alaska, Hawaii, Porto Rico, Guam and the Virgin Islands.

The service is divided into five main offices: (1) The Office of the Director, (2) Office of Experiment Stations, (3) Office of Extension Work in the South, (4) Office of Extension Work in the North and West, and (5) Office of Home Economics.

Office of the Director

The Office of the Director handles all administrative matters relating to personnel, finances and other executive business. It also includes the Editorial Division, and sections dealing with investigations on agricultural instruction in schools, and farmers' institutes and movable schools.

The section dealing with agricultural instruction in schools studies the methods and subject matter of school instruction in agriculture in this and other countries, furnishing schools with up-to-date and properly organized subject matter and illustrative material.

The section dealing with farmers' institutes and movable schools studies and the methods used and prepares publications and illustrative material especially adapted to these purposes.

Copyright 1920, by The Goodyear Tire & Rubber Co.

"Your Goodyear Cord Tires on our truck go right through the plowed ground of our citrus groves, permitting loading at the trees, and they protect the fruit, particularly the lemons, which are very delicate, by smoothing the haul to the packing house. They save labor, fruit, time."—H. J. Kelly, Packing House Manager, Charles C. Chapman Ranch, Fullerton, California

IN rural hauling like this and in farm duty radically different, the use of Goodyear Cord Tires on trucks has been found productive of a variety of important advantages.

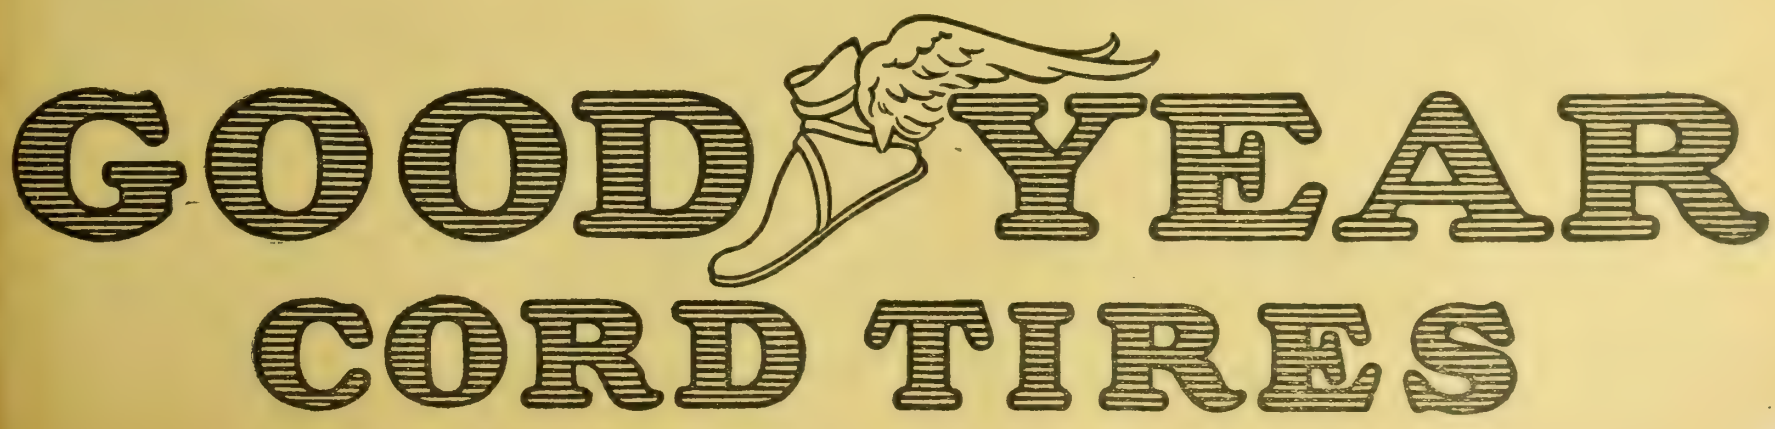
Their traction has increased truck utility for farmers, ranchmen, fruit growers, dairymen and others, particularly owners of motorized farms, by enabling easy hauling through soft fields.

Their cushioning has effected continuous savings in the marketing of delicate vegetables, fruit, dairy products and of eggs and livestock, all of which suffer on slow, jarring solid tires.

Their nimbleness often has accomplished more hauling with less driving and resulted in a quicker feeding of power machinery while releasing hands and saving time for farm work.

Throughout extended terms of service these virtues have been delivered with the stout reliability developed in Goodyear Cord construction by manufacturing methods that protect our good name.

Farmers' various accounts of their successful use of Goodyear Cord Tires on trucks can be obtained by writing to The Goodyear Tire & Rubber Company, Akron, Ohio.



Credit for All Who Need It is the Purpose of the McFadden Bill

Agricultural Editors Make Favorable Report on Measure to Extend Credits on Personal Integrity

AT THE meeting of agricultural editors in Chicago a committee was appointed to study the McFadden bill which provides for the establishment of a co-operative system of farm credit based on personal security, as distinguished from land-mortgage security.

It is a well known fact that under existing credit conditions the farmer who is in greatest need of money has, as a rule, the hardest time to get it. This is because our credit system ignores the personal equation and the large majority of loans are made on real estate security. This does very well for the farmer who has no or little encumbrance upon his farm, but it does not take care of the farmer who is carrying a large mortgage, the renter or the settler upon new land.

In recent years the federal government has enacted laws which amply provide for the extension of credit to commercial interests and to farmers who are in a position to give a real estate mortgage. The first of these laws is the federal reserve law and the second is the federal farm loan law. Both of these are excellent measures and have been of inestimable valu in keeping the whels of industry and agriculture going at full speed during the war. But there are a very considerable number of people owning or renting farms in the United States who receive no benefit whatever from the farm loan system. And yet it is of the utmost importance to the nation that they shall have credit facilities which will enable them to expand their operations and produce a portion of the nation's food supply. The McFadden bill which is now before congress seems to provide this relief and is well worth the study of all who are interested in the development of American agriculture.

Based on European Idea

The fundamentals of the bill are adopted from the personal credit systems of Europe which have been in successful operation for centuries. The organization for operating the system consists of three units, a central bank, a branch bank in each state and a local association. Because of the complexity of the measure it will not be possible to discuss more than the most important features in this article.

We will start with the local association. This in some respects resembles the local association of the farm loan system. In other respects it is radically different. Seven farmers may organize a community association, as the bill calls it, a "commune." Each member must buy stock in the branch bank for the state in which the commune is located. This stock will bear interest, but no dividends can be paid upon it until the branch bank has accumulated a safe surplus. There are three classes of communes, in each of which the extent of the liability of each member for the debts of the other members is different than in the other classes. The amount of credit of each member of a commune of the first class shall be limited to twenty times his paid-up stock: in the second class to twenty times his paid-up stock, and in the third class to five times his paid-up stock.

Applications for loans are made to the proper officers of the local commune. As under the farm loan system loans can only be made for productive agricultural purposes such as the purchase of animals, machinery, seed, feed, fertilizer, etc. Where the article to be purchased is not to be consumed or used up, a chattel mortgage is given, and such other security as the officers of the commune may see fit to demand. The applicant then draws up a number of "bills of exchange" against the commune. These bills are similar in some respects to a promissory note, except that they show upon their face that they are drawn for a productive transaction, and may freely be used as mediums of barter and exchange. In Europe millions of dollars worth of business is transacted through bills of exchange drawn by merchants and farmers. These bills are drawn in denominations and are for a period of time suitable to the convenience and desires of the borrower, subject to the approval of the local commune. They are sent, together with the chattel mortgage, to the branch for the state which issues a check against its deposits and forwards to the borrower. These bills are then endorsed by the branch bank and sent to the central bank which in turn endorses them and places them on the market where they are bought and sold in much the same manner as are Liberty bonds and other securities.

Bills Are a Good Investment

The question will be immediately raised that these bills are not attractive investments because they are given by persons who are not known to the purchasers of the bills and whose credit rating as judged by the usual standards is not of the best. It is not the maker but the endorser of these bills which guarantees their safety and makes them one of the best investments for people of moderate means. The bills will pay six per cent interest and are readily liquidated.

What is the Central Bank?

The whole stability of this system rests in the central bank. In Europe the capital of this and branch banks is originally furnished by the government and the merchants, but the McFadden bill would designate some insurance company having at least $400,000,000 of approved assets to bear the principal burden of underwriting and carrying the risks of this system. To inaugurate the system the bill would appropriate $25,000,000 from the National Treasury, this guaranty fund to be repaid in instalments from the sinking fund of the central bank. The insurance company would also provide the capital of $50,000 for each of the 48 branch banks, this capital to earn 6 per cent interest.

There is no more substantial financial institution in the United States than the old line life insurance company. The mere knowledge that such a concern was endorsing to the limit of its financial resources the bills of exchange of the rural credit society would naturally, instill great confidence in that class of paper as an investment, and it is believed that no difficulty would be encountered in finding a market for the bills.

Advantages of System

The principal advantages of this system in addition to those already discussed is that of giving every farmer a flexible credit system which would take care of both short and long time credit needs. Discussing the need for such a system the author of the bill says:

"To illustrate the inadequacy of our present banking or credit system, let us take the cattle-breeding industry. It is 9 months before a cow calves, and 15 to 21 months more before that calf may be converted into beef. Altogether it requires about the same time for credit used to build a silo to reproduce itself that is not safe business for a deposition banker, whose borrowed capital i spayable principally on demand. But this business is done with perfect safety by European rural-credit systems doing open-market operations. Our beef production is not keeping gpace with the increase in our population or industrial activities, and unless we provide adequate credit machinery to meet the requirements of that industry we may expect even higher beef prices than w now have."

Farmer Control

Speaking before the House in behalf of the McFadden bill, Congressman Goodwin of Arkansas said:

"Let us examine the responsibility of this control for the rural credit society. It will be observed that the directors, executive committeemen, and advisory councilmen must be members of communes of the first or second class—that is communes whose members are unlimitedly liable for the payment of the obligations of their respective communes. The farmer who cannot go out and find six farmer neighbors whom he is willing to trust, and who are willing to trust him, should not ask the privilege of legislating by enacting by-laws for farmers throughout the country who are willing to trust their neighbors. The communes of the first and second classes are nothing but partnerships, and the twentieth century corporation is but the evolution of the first century civil law partnership. And the only justification for the twentieth century corporation limiting the liability of its stockholders to their stock subscriptions is to raise capital from strangers,—strangers to those who control the corporation. But we do not want strangers in these communes. Only farmers who are close neighbors, so that each may see that the others do nothing wrong, should form a commune."

The McFadden Bill

THE EDITOR of The Business Farmer is one of the committee appointed by the American Agricultural Editors' Ass'n, to examine and make report on the McFadden Personal Credit bill. Other members of this committee are Dr. M. J. Spillman, former chief of the office of Farm Management and now associate editor of the Farm Journal; Carl Williams, editor Oklahoma Farmer and Stockman; John Thompson, editor Iowa Homestead, and C. A. Pugsley, editor Nebraska Farmer and president of the A. A. E. A. At the Washington meeting of this Ass'n, the majority of this committee expressed themselves as in favor of the McFadden bill, but out of deference to other members of the committee who, while they approved the main points of the bill did not want to openly endorse the measure, the committee simply reported favorably, the fundamental features of the bill, and recommended that the next congress be requested to conduct hearings on the need of personal credits along the lines embodied in the McFadden bill. It is not true as stated in a recent issue of a Michigan farm paper that the majority of the editors were against the bill. On the contrary, they were very much in favor of a personal credit measure and were willing to accept the recommendations of the committee. It seems certain that the next congress will be asked to pass the McFadden bill or one somewhat similar. The accompanying article is a very brief and incomplete summary of the bill. When the measure is before congress, we shall go more into its details.—Editor.

U. S. Supreme Court to Determine Constitutionality of Farm Loan Act

(Note: To several letters that have recently been received asking for information on how to secure a loan under the federal farm loan act, the accompanying article is an answer. The farm loan banks have made no loans for over three months and will make none until the Supreme Court determines whether or not the loan is constitutional. This may be a matter of several or more months.)—Editor.

(1) In July, 1919, representatives of the Farm Mortgage Banks brought suit in the Federal Court at Kansas City, challenging the validity of the act. The court dismissed the complaint and the constitutionality of the act October 31st.

(2) The case was appealed to the Supreme Court of the United States and heard January 6th. On April 26th the Supreme Court ordered a reargument of the case to be taken some time during its next term in October.

(3) The Federal Farm Loan Board has offered no bonds for sale since the litigation was begun and does not intend to offer any for sale while the litigation is pending. (See Lobdell's letter to Platt.)

(4) Mr. Platt, Chairman of the Banking and Currency Committee of the House introduced a resolution which would have given the Secretary of the Treasury authority to purchase farm loan bonds to the amount of $64,000,000, this sum being the amount available to the Secretary of the Treasury from the $200,000,000 appropriation provided by congress January 18, 1918, at the request of the Secretary of the Treasury, McAdoo, to be used for the purchase of farm loan bonds, in order to avoid having these bonds on the investment market in opposition with Liberty Bonds. Of this $200,000,000 about $136,000,000 had been used in the purchase of bonds, leaving a balance of $64,000,000.

In his letter to Mr. Platt, Secretary Houston said, "I would urge that the congress limit the amount which the Treasury may use to purchase bonds to the actual committants of the Farm Loan Banks, which as I understand it, will not exceed $32,000,000."

(5) The Federal Farm Loan Board through Commissioner Lobdell took the same position as the Secretary of the Treasury.

(6) The Banking and Currency Committee amended its original resolution and limited the authority to sell bonds in an amount only sufficient to cover loans approved prior to March 1, 1920—in round numbers, $32,000,000.

(7) The Federal Farm Loan Board on June 2nd adopted a resolution providing that the office of Secretary of the Board, held by Mr. W. W. Flannaghan, be declared vacant, and for the removal of clerks and stenographers and other assistants to the number of sixteen.

To those who are familiar with Mr. Houston's record as Secretary of Agriculture and his lack of insight and sympathy for farmers' problems it will not be surprising that now as Secretary of the Treasury he will welcome the dismissal of Secretary Flannagan. Mr. Flannagan has deep-seated convictions with reference to the questions of money and credits, which are believed to be not at all to the liking of Secretary Houston. For instance Mr. Flannagan in a preamble to a plan which he has submitted states:

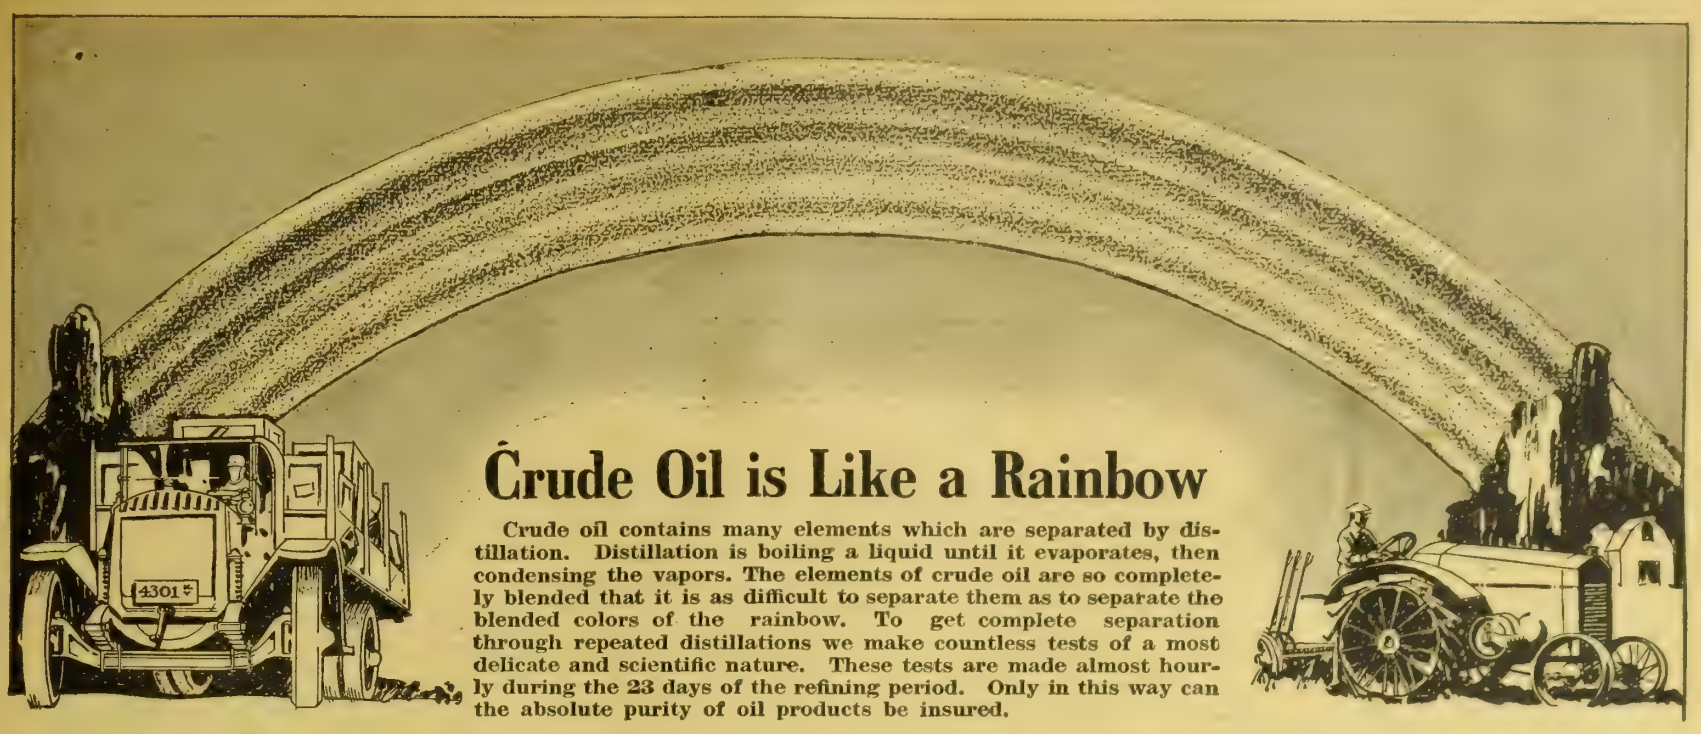
(1) The public supplies the credit which enables the substitutes for coin to circulate as money.

(2) Such substitutes bear no interest and the public is entitled to the benefit arising from the use of such substitute.

(3) The National Currency Act gave to the banks the benefit arising from the public use of such substitutes and the Federal Reserve Act continues this benefit, except as to excess profits by the twelve Federal Rserve Banks over 6 per cent.

(4) The exclusive right to benefit from the use of this substitute is class legislation in favor of the business of banking.

From the above position with reference to the commercial banks of the country Mr. Flannagan argues that Farm Loan Bonds should be made convertible at any interest period into non-taxable, non-interest bearing certificates in the same form and denominations as circulating notes, and reconvertible into farm lon bonds at the option of any holder when presented at the Treasury.



Crude Oil is Like a Rainbow

Crude oil contains many elements which are separated by distillation. Distillation is boiling a liquid until it evaporates, then condensing the vapors. The elements of crude oil are so completely blended that it is as difficult to separate them as to separate the blended colors of the rainbow. To get complete separation through repeated distillations we make countless tests of a most delicate and scientific nature. These tests are made almost hourly during the 23 days of the refining period. Only in this way can the absolute purity of oil products be insured.

En-ar-co

SCIENTIFIC REFINING

The Oil of a Million Tests

The secret of successful scientific oil refining is painstaking care and unceasing vigilance. In making En-ar-co oils we average over a million tests a year. It is only by this multiplying of tests that perfect products can be made. This thoroughness in our scientific refining processes is the protection we offer to users of our products.

Why En-ar-co Motor Oil is Better

All refiners make lubricants, just as all cooks can make biscuits, yet there is as much difference in oils as there is between the delicious light, flaky biscuits mother makes and the heavy, soggy apologies for biscuits most restaurants serve. In each case the raw materials are practically the same but the "making" is different.

"The Oil of a Million Tests" is not merely a slogan. It is an actual fact. From the time we produce the crude oil (by test) to the end of the 23-day refining process it is tested almost hourly, and every refining test is checked by scientific laboratory tests.

To protect and safeguard your motor, use En-ar-co Motor Oil in your auto, truck or tractor. It contains no sediment-forming impurities. It is always uniform in excellence.

EN-AR-CO AUTO GAME FREE

Here is a fascinating game in which autos compete in a cross country race. Two, three or four can play. Only one game to a family.

TRADE AND MARKET REVIEW

"While I recognize and for many months have comprehended the dangers in the general situation, I am more optimistic in regard to the future than I have been at any time during the past six years," said Elbert H. Gary, president of the United States Steel Corporation, recently regarding business conditions in this country. Shrewd observers of business and finance express their opinion that Mr. Gary is right and that the greatest menace to the present prosperity is pessimism. It is believed that Mr. Gary bases his statement on his observations of the greater efficiency of labor per man in the last 30 or 40 days than at any time in the last five years.

Banks are coming along fine and, while money is not what you would call "easy," credit can be secured by those who grow, manufacture or handle necessities; that is credit to a certain limit at undoubtedly a fairly high price for the accommodation. Bankers say there will be plenty of money to help the farmer move his crops. This movement calls for money from the middle of July to around the last of October or the first of November and one of the main reasons of the campaign by the Federal Reserve Banks to curtail non-essential loans was to meet this demand. The extent of the demand will depend largely on the efficiency, or otherwise, of the transportation system, but it is fully believed that it will be considerable greater than last year.

Last Saturday the Interstate Commerce Commission named the increased rates which the railroads will be allowed to charge in order to absorb the 600 million dollar wage increase granted to railroad employes by the commission. Passenger fares were increased 20 per cent. Freight rates were increased 40 per cent in the East, 25 per cent in the South, 35 per cent in the West and 25 per cent in the Mountain-Pacific territory. These increases may take effect on five days' notice given the commission by the railroads and must be put into effect by January 1, 1921, but it is thought that they will be put into force by September first, as the government guaranty to the roads expires at that time. Shippers of milk will have a 20 per cent increase in rates to bear. If we can get better service and transport the crops to the market when we wish, thus enabling the farmer to sell his products when the price is right, the increase in rates will not seem so bad; in fact, better service will more than make up the difference in rates.

Crops in general are in favorable condition with excellent growing weather. Reports from the West and South show winter wheat all harvested and threshing well advanced. The harvesting in the East has been held up the past week by rains. The condition of spring wheat varies; some states report it to be ready to harvest and others that it is in the dough, but the general opinion is the yield will not be as large as the winter wheat. There is some damage done to corn in many states by cutworms, cinch bugs and army worms, but the outlook in general promises a big yield. It looks like there will be plenty of oats this year. Threshing has started in many sections while others expected to harvest this week. Rye is averaging fairly good. Prospects of a bumper fruit crop is very favorable.

Condition of crops as a whole looks as if we were living in a world of plenty, doesn't it? It makes me think of a cartoon I saw in a farm paper the other day. The title was "Driven From Home," and it showed the farmer and his family out in the road, the barn bulging because it was so full of grain and hay, and his house had been pushed from its foundation by growing crops.

LAST MINUTE WIRES

DETROIT—Grains steadier, but slump is expected to be resumed at any moment. Beans are inactive. Potatoes lower. Hogs slow. Cattle dull and lower.

CHICAGO—Grains show little strength. Potatoes drop. Cattle steady to strong. Hogs steady. Beans dull.

(Note: The above summarized wires are received AFTER the balance of the market page is set in type. They contain last minute information up to within one-half hour of going to press.—Editor.

No. 2 White	2.17½	2.17	
No. 2 Mixed	2.22½		

Drastic liquidation has been the feature of the wheat market the past week. At the beginning of the week the market was weak and lower prices were in sight but about the middle of the week an attempt was made by some dealers to cause an advance. They succeeded in causing the market to halt and it looked like it might turn and advance but the strength only lasted a short time and then the market was weaker than it has been at any time since liquidation has set in; in fact, at one time on the Detroit market it appeared that prices could not decline fast enough. This panicky feeling was attributed to a wire received by operators from a Chicago dealer, who advised selling wheat and lose no time in doing it. There is no milling demand for wheat at present. The country is oversupplied with flour and many mills have shut down. Export buying has also dropped off considerable. A few foreigners bought during the declines of the current week. The British are out of the market for a week. Reports of damage to spring wheat by the black rust continue to come from the Northwest, but there is nothing to indicate that the damage is sufficient to bring the crop much below the government estimate of July first. Threshing returns show the winter wheat yield to be better than was expected. Returns from Kansas indicate the yield of that state will be around 147,000,000 bushels. Nearly all states where threshing has begun report yields satisfactory or higher than expected. Michigan has suffered some from the Hessian fly. One report from Allegan county shows a yield of 23.5 bushels per acre. Other counties, owing to fly damage, show yields of only 6 bushels per acre. Markets are well supplied with old wheat and farmers are rushing their 1920 crop to market, thus keeping the markets over-stocked. There is nothing to indicate that prices will not go still lower.

CORN CONTINUES WEAK

No. 4 Yellow			

Corn continues to show considerable weakness, but not quite as much as other grains owing to the fact that this crop is not entirely out of danger yet. Indications now are that we will have a big yield as the crop is in excellent conditions in nearly all states but there is time yet for something to happen to it. Dealers are not so anxious to sell corn because the 1920 crop is so late it may be ruined by an early frost. They also say they think prices are about as low as they will go, for a time at least, as it is feared farmers will stop selling if prices go much lower. The editor of the *Rosenbaum Review*, who is an authority on markets, states that he looks for lower prices until the first of the year, owing to the liquidation of livestock, thus lessening the demand from that quarter, to the excellent condition and rapid growth of the crop at the present time and to the carry-over into the new crop which is bound to be large. This is the opinion we have held for some time, and, if you remember, we have expressed in these columns. The government estimate of July first was around 3 billion but with the present outlook it is thought that the estimate for August first will be about one-quarter of a billion more than that.

OATS FOLLOW THE DOWNWARD TREND OF OTHER GRAINS

OAT PRICES PER BU., AUGUST 3, 1920			
Grade	Detroit	Chicago	N. Y.

Standard			.92
No. 3 White	.77½	.69¼	
No .4 White			

It looks like a general liquidation had set in with oats as well as other grains. The price dropped 3c on the Detroit market last Saturday. How low the prices will go depends largely on how big a yield we are going to have. Threshing returns from such states as have started threshing are very good. Some states report abnormal yields, but the biggest share of the oat crop has not been harvested yet. Reports by government field agents give the standing grain to be excellent and a yield beyond expectations is promised. Some damage has been done by smut and dry weather in a few states, but not enough to lower the yield to any great extent. Chicago is receiving new oats from her own state. The crop is expected to move freely as soon as more cars are available. Farmers are not expected to like prices, but, as the *Rosenbaum Review* expresses it, "it must be remembered that the present decline is only natural, and that grains are readjusting to a new crop basis, in addition to seeking a post-war level."

RYE SLUMPS

Rye was caught in the downward sweep of the grain prices during the current week and dropped 25c on the Detroit market, which brings the price down to $1.70 for No. 2. The market is quiet and easy. Reports from the country say the crop is yielding very good. The condition of this grain in foreign countries appears to be good. Harvest began in France, Belgium, Holland and several smaller countries about the first of July and they all report their crop very promising so far.

BEANS EASY

BEAN PRICES PER CWT., AUG. 3, 1920			
Grade	Detroit	Chicago	N. Y.
C. H. P.	6.75	7.00	8.25
Red Kidneys		15.50	17.50
PRICES ONE YEAR AGO			
Grade	Detroit	Chicago	N. Y.
C. H. P.	8.25		
Prime			
Red Kidneys			

C. H. P. beans dropped 15c during the past week on the Detroit market and 50c on the Chicago market. The New York market rules fairly firm and prices not so changable as the other markets mentioned. The Detroit market is experiencing a very light demand and the tone of the market is dull and easy.

Potato markets in general are weaker than last week. The Detroit market declined around a dollar per cwt.; the New York market around 50c and at Chicago over one dollar. Potatoes at Detroit are very weak owing to an overstocked market caused by the railroads inability to deliver cars as per schedule for 3 days last week and then the roads brought in the 3 days' receipts all in one day. The result was, 117 cars arrived at the yards that day and the bottom dropped out of the price. One company reports a loss of $400 per car on 41 cars. Another claims to have lost $1,372 on two cars. Receipts on the Pittsburg market are about normal with prices much lower. Most of the markets report the consumer is not buying very many "spuds," as they are waiting for the prices to work lower. New York dealers say that the only thing that keeps the prices from declining faster is some demand for export. The crop appears to be in excellent condition throughout the country. Late potatoes in Michigan are reported to be coming along fine and an average yield expected.

The demand for hay is at a very low point as pasturage is excellent and the consuming trade has been well supplied. Markets are congested and supplies that were loaded forward during the high value period continue to arrive. New invoices are small, however, but most markets report sufficient hay in sight to supply the demand for the next thirty days.

DROP IN WOOL CONSUMPTION

A drop in wool consumption of nearly 17,000,000 pounds from the average for the six months of 1920 is seen in figures for June, 1920, just released by the Bureau of Markets, United States Department of Agriculture. According to the report, 46,000,000 pounds of wool, grease wool equivalent, entered into manufacture during that month, compared with 55,000,000 pounds for the corresponding month last year. Summaries for preceding months of 1920 have shown the following amounts used: January, 72,700,000 pounds; February, 63,700,000 pounds; March, 67,900,000 pounds; April, 66,900,000 pounds; May, 58,600,000 pounds.

The sharp decrease in wool consumption is a result of the curtailment of operations which began in the textile manufacturing industry in May and became more extensive in June. Many mills have been running on a short-week schedule, while some have suspended operations entirely, the suspensions in many cases being for an indefinite period. Lack of orders, cancellations and deferred shipments are given as primary causes for the unstable situation.

A comparison of the relative consumption of the different grades with figures for preceding months shows that fine wools not only continue to hold first place in demand, but appear to be recovering the points lost a few months ago. The percentages for June are: Fine, 31.5 per cent; 1-2 blood, 15.0 per cent; 3-8 blood, 15.5 per cent; 1-4 blood, 20.8 per cent; low, 2.9 per cent; carpet, 13.9 per cent; and grade not stated, less than 1-2 of 1 per cent. The percentages for May were: Fine, 30.5 per cent; 1-2 blood, 16.2 per cent; 3-8 blood, 16.7 per cent; 1-4 blood, 20.8 per cent; low, 3.2 per cent; carpet, 12 per cent.

Of the total reported, the amounts by conditions were: Grease wool, 33,940,086 pounds; scoured wool, 5,477,628 pounds; pulled wool, 1,262,206 pounds. Arranged according to states the figures show Massachusetts leading with a total of 14,668,380 pounds, with other states in the following order: Pennsylvania, 6,981,973 pounds; Rhode Island, 4,922,651 pounds; New Jersey, 4,075,587 pounds; New York, 3,352,566 pounds; Connecticut, Ohio, New Hampshire and Maine approximately 1,000,000 pounds each.

BOSTON WOOL MARKET

The *Commercial Bulletin* says: "Uncertainty still reigns in the wool market and values are hardly more than nominal. Everyone is watching the course of the goods market, which is revealing little at the moment. Sales of wool have been few and small. The foreign primary markets are unchanged and little or nothing new is reported from the West, practically all business being on consignments. Mohair is dull and nominal.

Ohio and Pensylvania fleeces.—Delaine unwashed, 70@72c; fine unwashed, 60@62c; 1-2 blood combing, 68@72c; 3-8 blood combing, 50@53c.

Michigan and New York fleeces.—Fine unwashed, 58@60c; delaine, unwashed, 68; 1-2 blood, unwashed, 67@68c; 3-8 blood, unwashed, 50@52c.

Wisconsin, Missouri, and average New England—1-2 blood, 60@68c; 3-8 blood, 48@50c; 3-4 blood, 40@43c.

Kentucky, West Virginia and similar—3-8 blood, unwashed, 53@58c; 1-4 blood, unwashed, 48@50c.

LIVE STOCK MARKET

By H. H. Mack

The week opened with high grade beef cattle selling fairly well in all markets but all grade of grass-fed cattle were dull and lower with some of the poorer kinds almost unsalable. In Chicago, on Monday, prime killing steers and the better grades of heavy cattle were in active demand and about steady in price but in all other kinds were dull and lower. Buffalo, on Monday, showed the same symptoms as Chicago, the demand for tidy killers and heavy steers showing up strong and active while all grades of grassers were neglected. Detroit got a light run of cattle last week and prices for everything that carried killing quality sold from 15 to 35 cents per cwt. higher than the average of the week before. Some very good steers came to hand in Detroit last week and $15 per cwt. was paid in one or two cases. The top in Chicago, last week, was $17, this price being 25 cents higher than the week before. The average price for

(*Continued on page* 17)

Feed Your Wheat!

The wheat plant is the tiniest, tenderest and most delicate of all the cultivated cereals, yet it produces the bread of the civilized nations.

And the men who live on good, white wheat-bread and butter are the men who lead the world.

Wheat prices are on the jump and in our opinion will bring the highest figures ever known at next year's harvest.

You can make the bushels that pay the extra profit and get the grade that commands the top price by using the fertilizer that bears the official stamp of FEDERAL QUALITY, guaranteeing in every complete formula the largest amount of:

Readily Available Phosphorus
The Grain Making Material

Graduated Nitrogen
To Feed the Plant from Seed-time to Harvest

Soluble Organic Potash
From Ground Burley Tobacco Stems

Federal Fertilizer picks up the lost motion occasioned by lack of labor, unfavorable weather and late seeding to miss the fly.

Federal Fertilizer grows long, strong wheat roots to withstand the freeze and thaw of winter. It makes heavy wheat blades to protect the plant from injury and keeps it strong and vigorous to the time of harvest.

Federal Fertilizer grows plump, heavy berries in the place of shriveled grain. It makes the wheat stool out. "Every added tiller makes an extra head of grain."

Feed your wheat Federal Fertilizer to make the grass and clover grow. Rotate your fields from grain to grass crops to make humus in the soil. A set of grass and clover after fertilized wheat will more than pay for all fertilizer used.

There is a wheat and clover formula to suit your soil and a nearby Federal dealer who will supply your needs. Failing to find him, write us describing the character of your soil, whether clay, sand land or loam and we will give you the benefit of our thirty-five years experience in making fertilizer that has always given results in the field.

"Hearts of Three"

By JACK LONDON

Author of the "Valley of the Moon," and other stories.

"I INSIST," said Henry. "Oh, very well," Francis conceded. "Then we'll do it together. We can throw him farther off the steps."

Acting as one they clutched Torres by collar and trousers and started in a propulsive rush for the door.

All others in the room ran to the windows to behold Torres' exit; but Enrico, quickest of all, gained a window first. And, afterward, into the middle of the room, the Queen scooped the gems from the table into both her hands, and gave the double handful to Leoncia, saying:

"From Francis and me to you and Henry—your wedding present."

Yi Poon, having left the crone by the beach and crept back to peer at the house from the bushes, chuckled gratifiedly to himself when he saw the rich caballero thrown off the steps with such a will as to be sent sprawling far out into the gravel. But Yi Poon was too clever to let on that he had seen. Hurrying away, he was half down the hill ere overtaken by Torres on his horse.

The celestial addressed him humbly, and Torres, in his general rage, lifted his riding whip savagely to slash him across the face. But Yi Poon did not quail.

"The Senorita Leoncia," he said quickly, and arrested the blow. "I have great secret." Torres waited, the whip still lifted as a threat. "You like 'm some other man marry that very nice Senorita Leoncia?"

Torres dropped the whip to his side.

"Go on," he commanded harshly. "What is the secret?"

"You no want 'm other man marry that Senorita Leoncia?"

"Suppose I don't?"

"Then, suppose you have secret, you can stop other man."

"Well, what is it? Spit it out."

"But first," Yi Poon shook his head, "you pay me six hundred dollars gold. Then I tell you secret."

"I'll pay you," Torres said readily although without the slightest thought of keeping his word. "You tell me first, then if no lie, I'll pay you—See!"

From his breast pocket he drew a wallet bulging with paper bills; and Yi Poon, uneasily acquiescing, led him down the road to the crone on the beach.

"This old woman," he explained, "she no lie. She sick woman. Pretty soon she die. She is afraid. She talk to priest along Colon. Priest say she must tell secret, or die and go to hell. So she no lie."

"Well, if she doesn't lie, what is it she must tell?"

"You pay me?"

"Sure. Six hundred gold."

"Well, she born Cadiz in old country. She number one servant, number one baby nurse. One time she take job with English family that come traveling in her country. Long time she work with that family. She go back along England. Then bime by—you know Spanish blood very hot—she get very mad. That family have one little baby girl. She steal little baby girl and run away to Panama. That little baby girl Senor Solano he adopt just the same his own daughter. He have plenty sons and no daughter. So that little baby girl he make his daughter. But that old woman she no tell what name belong little girl's family. That family very high blood, very rich, everybody in England know that family. That family's name 'Morgan.' You know that name? In Colon comes San Antonio men who say Senor Solano's daughter marry English Gringo named Morgan. That Gringo Morgan the Senorita Leoncia's brother."

"Ah!" said Torres with maleficent delight.

"You pay me now six hundred gold," said Yi Poon.

"Thank you for the fool you are," said Torres with untold mockery in his voice. "You will learn better perhaps some day the business of selling secrets. Secrets are not shoes or mahogany timber. A secret is no more than a whisper in the air. It comes. It goes. It is gone. It is a ghost. Wha has seen it? You can claim back shoes or mahogany timber. You can never claim back a secret when you have told it."

"We talk of ghosts, you and I," said Yi Poon calmly. "And the ghosts are gone. I have told you no secret. You have dreamed a dream. When you tell men they will ask you what told you. And you will say, 'Yi Poon.' But Yi Poon will say, 'No.' And they will say 'Ghosts' and laugh at you."

Yi Poon feeling the old yield to his superior subtelty of thought, deliberately paused.

"We have talked whispers," he resumed after a few seconds. "You speak true when you say whispers are ghosts. When I sell secrets I do not sell ghosts. I sell shoes. I sell mahogany timber. My proofs are what I sell. They are solid. On the scales they will weigh weight. You can tear the paper of them, which is legal paper of record, on which they are written. Some of them, not paper, you can bite with your teeth and break your teeth upon. For the whispers are already gone like morning mists. I have proofs. You will pay me six hundred gold for the proofs, or men will laugh at you for lending your ears to ghosts."

"All right," Torres capitulated, convinced. "Show me the proofs that I can tear and bite."

"Pay me the six hundred gold."

"When you have shown me the proofs."

"The proofs you can tear and bite are yours after you have put the six hundred gold into my hand. You promise. A promise is a whisper, a ghost. I do not do business with ghost money. You pay me real money I can tear or bite."

And in the end Torres surrendered paying in advance for what did satisfy him when he had examined the documents, the old letters, the baby locket and the baby trinkets. And Torres not only assured Yi Poon that he was satisfied, but paid him in advance, on the latter's insistence, an additional hundred gold to execute a commission for him.

Meanwhile, in the bathroom which connected their bedrooms, clad in fresh underlinen and shaving with safety razors, Henry and Francis were singing:

"Back to back against the mainmast;
Held at bay the entire crew . . ."

In her charming quarters, aided and abetted by a couple of Indian seamstresses, Leoncia, half in mirth and half in sadness, and in all sweetness and wholesomeness of generosity, was initiating the Queen into the charmingness of civilized woman's dress. The Queen, a true woman to her heart's core, was wild with delight in the countless pretties of texture and adornment with which Leoncia's wardrobe was stored. It was a maiden frolic for the pair of them, and a stitch here and a take-up there modified certain of Leoncia's gowns to the Queen's slenderness.

"No," said Leoncia judicially. "You will not need a corset. You are the one woman in a hundred for whom a corset is not necessary. You have the roundest lines for a thin woman that I ever saw. You . . ." Leoncia paused, apparently deflected by her need for a pin from her dressing table, for which she turned; but at the same time she swallowed the swelling that choked in her throat, so that she was able to continue: "You are a beautiful bride and Francis can only grow prouder of you."

In the bathroom, Francis, finished shaving first, broke off the song to respond to the knock at his bedroom door and received a telegram from Fernando, the next to the youngest of the Solano brothers. And Francis read:

"Important your immediate return. Need more margins. While market very weak but a strong attack on all your stocks except Tampico Petroleum, which is strong as ever. Wire me when to expect you. Situation is serious. Think I can hold out if you start to return at once. Wire me at once.

BASCOM."

In the living room the two Morgans found Enrico and his sons opening wine.

"Having but had my daughter restored to me," Enrico said, "I now lose her again. But it is an easier loss, Henry. Tomorrow shall be the wedding. It cannot take place too quickly. It is sure, right now, that that scoundrel Torres is whispering all over San Antonio Leoncia's latest unprotected escapade with you."

Ere Henry could express his gratification, Leoncia and the Queen entered. He held up his glass and toasted:

"To the bride!"

Leoncia, not understanding, raised a glass from the table and glanced to the Queen.

"No, no," said Henry, taking her glass with the intention of passing it to the Queen.

"No, no," said Enrico. "Neither shall drink the toast which is incomplete. Let me make it:

"To the brides!"

"You and Henry are to be married tomorrow," Alesandro explained to Leoncia.

Unexpected and bitter though the news was, Leoncia controlled herself, and dared with assumed jollity to look Francis in the eyes while she cried:

"Another toast! To the bridegrooms!"

Difficult as Francis had found it to marry the Queen and maintain equanimity, he now found equanimity impossible at the announcement of the immediate marriage of Leoncia. Nor did Leoncia fail to observe how hard he struggled to control himself. His suffering gave her secret joy, and with a feeling almost of triumph she watched him take advantage of the first opportunity to leave the room.

Showing them his telegram and assuring them that his fortune was at stake, he said he must get off an answer and asked Fernando to arrange for a rider to carry it to the government wireless at San Antonio.

Nor was Leoncia long in following him. In the library she came upon him, seated at the reading table his telegram unwritten, while his gaze was fixed upon a large photograph of her which he had taken from its place on top the low bookshelves. All of which was too much for her. Her involuntary gasping sob brought him to his feet in time to catch her as she swayed into his arms. And before either knew it their lips were together in fervent expression.

Leoncia struggled and tore herself away, gazing upon her lover with horror.

"This must stop, Francis!" she cried. "More: you cannot remain here for my wedding. If you do, I shall not be responsible for my actions. There is a steamer leaves San Antonio for Colon. You and your wife must sail on it. You can easily catch passage on the fruit boats to New Orleans and take train to New York. I love you!—you know it."

"The Queen and I are not married!" Francis pleaded, beside himself, overcome by what had taken place. "That heathen marriage before the Altar of the Sun was no marriage. In neither deed nor ceremony are we married. I assure you of that Leoncia. It is not too late—"

"That heathen marriage has lasted you thus far," she interrupted him with quiet firmness. "Let it last you to New York, or, at least to . . . . Colon."

"The Queen will not have any further marriage after our forms," Francis said. "She insists that all her female line before her has been so married and that the Sun Altar ceremony is sacredly binding."

Leoncia shrugged her shoulders non-committally, although her face was stern with resolution.

"Marriage or no," she replied, "you must go—tonight—the pair of you. Else I shall go mad. I warn you; I shall not be able to withstand the presence of you. I cannot, I

know I cannot, be able to stand the sight of you while I am being married to Henry and after I am married to Henry—Oh, please, please, do not misunderstand me. I do love Henry but not in the . . . not in that way . . . not in the way I love you. I—and I am not ashamed of the boldness with which I say it—I love Henry about as much as you love the Queen; but I love you as I should love Henry, as you should love the Queen, as I know you do love me."

She caught his hand and pressed it against her heart.

"There! For the last time! Now go!"

But his arms were around her, and she could not help but yield her lips. Again she tore herself away, this time fleeing to the doorway. Francis bowed his head to her decision, then picked up her picture.

"I shall keep this," he announced.

"You oughn't to," she flashed a last fond smile at him. "You may," she added, as she turned and was gone.

Yet Yi Poon had a commission to execute, for which Torres had paid him one hundred gold in advance. Next morning, with Francis and the Queen hours departed on their way to Colon, Yi Poon arrived at the Solano hacienda. Enrico smoking a cigar on the veranda and very much pleased with himself and all the world the way the world was going, recognized and welcomed Yi Poon as his visitor of the day before. Even ere they talked, Leoncia's father had dispatched Alesandro for the five hundred pesos agreed upon. And Yi Poon, whose profession was trafficking in secrets, and not averse to selling his secret the second time. Yet was he true to his salt, in so far as he obeyed Torres' instructions in refusing to tell the secret save in the presence of Leoncia and Henry.

"That secret has the sering on it," Yi Poon apologized, after the couple had been summoned, as he began unwrapping the parcel of proofs. "The Senorita Leoncia and the man she is going to marry must first, before anybody else, looks at these things. Afterward, all can look."

"Which is fair, since they are more interested than any of us," Enrico conceded grandly, although at the same time he betrayed his eagerness by the impatience with which he motioned his daughter and Henry to take the evidence to one side for examination.

He tried to appear uninterested, but his side-glances missed nothing of what they did. To his amazement he saw Leoncia suddenly cast down a legal appearing document, which she and Henry had read through, and throw her arms, whole-heartedly and freely about his neck, and wholeheartedly and freely kiss him on the lips. Next, Enrico saw Henry step back and exclaim in a dazed, heartbroken way:

"But, my God, Leoncia! This is the end of everything. Never can we be husband and wife!"

"Eh?" Enrico snorted. "When everything was arranged. What do you mean, sir? This is an insult! Marry you shall, and marry today!"

Henry, almost in stupefaction, looked to Leoncia to speak for him.

"It is against God's law and man's," she said, "for a man to marry his sister. Now I understand my strange love for Henry. He is my brother. We are full brother and sister, unless these documents lie."

And Yi Poon knew that he could take report to Torres that the marriage would not take place and would never take place.

CHAPTER XXIV.

CATCHING a United Fruit Company boat at Colon within fifteen minutes after landing from the small coaster, the Queen's progress with Francis to New York had been a swift rush of fortunate connections. At New Orleans a taxi from the wharf to the station and a racing of porters with hand luggage had barely got them aboard the train just as it started. Arrived at New York, Francis had been met by Bascom, in Francis' private machine, and the rush had continued to the rather ornate palace R. H. M. himself, Francis' father, had built out of his millions on Riverside Drive.

So it was that the Queen knew scarcely more of the great world than when she first started her travels by leaping into the subterranean river. Had she been a lesser creature, she would have been stunned by this vast civilization around her. As it was, she was royally inconsequential, accepting such civilization as an offering from her royal spouse. Royal he was, served by many slaves. Had she not, on steamer and train, observed it? And here, arrived at his palace, she took as a matter of course the showing of house servants that greeted them. The chauffer opened the door of the limousine. Other servants carried in the hand baggage. Francis touched his hand to nothing, save to her arm to assist her to alight. Even Bascom—a man she divined was no servitor—she also divined as one who served Francis. And she could not but observe Bascom depart in Francis' limousine, under instruction and command of Francis.

She had been a queen, in an isolated valley, over a handful of savages. Yet here, in this mighty land of kings, her husband ruled kings. It was all very wonderful, and she was deliciously aware that her queenship had suffered no diminishing by her alliance with Francis.

Her delight in the interior of the mansion was naive and childlike. Forgetting the servants, or, rather ignoring them as she ignored her own attendants in her lake dwelling, she clapped her hands in the great entrance hall, glancing at the marble stairway, tripped in a little run to the nearest apartment and peeped in. It was the library, which she saw visioned in the Mirror of the World the first time she say Francis. And the vision realized itself, for Francis entered with her into the great room of books, his arm about her, just as she had seen him on the fluid-metal surface of her golden bowl. The telephones, and the stock ticker, too, she remembered; and, just as she had foreseen herlself do, she crossed over to the ticker curiously to examine, and Francis, his arm still about her, stood by her side.

Hardly had he begun an attempted explanation of the instrument, and just as he realized the impossibility of teaching her in several minutes all the intricacies of the stock market institution, when his eyes noted on the tape that Frisco Consolidated was down twenty points—a thing unprecedented in that little Iowa railroad which R. H. M. had financed and builded and to the day of his death maintained proudly as so legitimate a creation that, though half the banks and all of Wall Street crashed, it would weather any storm.

The Queen view with alarm the alarm that grew on Francis' face.

"It is magic—like my Mirror of the World?" she half queried, half-stated.

Francis nodded.

"It tells you secrets, I know," she continued. "Like my golden bowl, it brings all the world, here within this very room to you. It brings you trouble. That is very plain. But what trouble can this world bring you, who are one of its great kings?"

He opened his mouth to reply to her last question, halted, and said nothing, realizing the impossibility of conveying comprehension to her, the while, under his eyelids, or at the while, under his eyelids, or at pictures of great railroad and steamship lines, of teeming terminals and noisy docks; of miners toiling in Alaska, in Montana, in Death Valley; of bridled rivers and harnessed waterfalls, and of power lines stilting across lowlands; and of all the mechanics and economics and finances of the twentieth century civilization.

"It brings you trouble," she repeated. "And also! I cannot help you. My golden bowl is no more. Never again shall I see the world in it. I am no longer a ruler of the future. I am a woman merely, and helpless in this strange colossal world to which you have brought me. I am a woman merely, and your wife, Francis, your proud wife."

Almost did he love her, as, dropping the tape, he pressed her closely for a moment, ere going over to the battery of telephone. She is delightful was his thought. There is neither guile nor malice in her, only woman, all woman, lovely and lovable

Your Rail-less Railroad

YOUR live stock and the produce from your fields, carried in freight trains to the cities, thunder past countless danger-signs with the warning, "Look Out for the Cars!" Each one of these marks the crossing-place of a country road—a road without rails, leading to railroad and town. Each one marks a farmer's right-of-way.

Since your farm is a 1920 enterprise, probably it is fitted with most of the following modern equipment—the telephone, good lighting and heating, a silo, a manure spreader, a cream separator, an automobile, an engine, a tractor.

But have your hauling problems found their proper solution? Are the time-losses and difficulties of a decade ago still impeding your endless carrying of farm loads?

Government statistics show that in 1918 alone, 350,000,000 tons of farm produce were transported to local shipping centers in motor trucks. The same national figures prove also that American farmers are the greatest users of motor trucks—among all industries. No progressive farmer can afford to overlook impressive *facts* like these.

Your name and address mailed to our office at Chicago will bring you descriptive folders that will prove interesting and instructive. Put an ***International Motor Truck*** at work on your farm and on the roads which are your right-of-way. Handle all your miscellaneous farm hauling with railway efficiency. The nine ***International Motor Truck*** sizes range from ¾ ton to 3½ ton. Keep in mind that these trucks have been made for years by the makers of good and trusted farm machines.

Rural Population

THE UNITED States Census Department has verified the oft-repeated assertion that rural population is on the decline. The tabulation of census returns from four of Michigan's best agricultural counties shows that their population is much less today than it was ten years ago.

Does this signify that the people of the rural communities are no longer begetting children? Is this situation a counterpart of that which prevails in some parts of France where people die at a greater rate than they are born? Not at all. While it be true that the people of the cities are not as prolific of children as in days of yore there seems to have been no dimunition of child-bearing and rearing in the strictly rural communities. Judging from the birth columns in the local papers farmers are still producing future citizens in much the same old-fashioned way.

What then has happened to this multiplied rural population? For an answer examine the census returns from some of the large cities. In 1910 Detroit had a population of 466,000, which it took over 200 years to acquire. Today the city has close to a million. In other words Detroit's growth from 1910 to 1920 almost exactly equals her growth from 1710 to 1910. The city of Flint affords another striking example of the tremendous growth of cities at the expense of the rural communities.

To the cold eye of the census enumerator there is nothing startling about these facts. But to those who have an eye on the social and economic progress of the race they contain deep significance. He is apt to ponder upon the question, "How much longer can the drift of population from country to city continue without disturbing wth various effects the balance that ought to be maintained between the populations of the two environments?"

The population of the world is increasing rapidly and consequently the need for more food becomes daily greater. Manifestly we cannot meet this increased demand for food products if the food producers leave their farms and go to the cities. It would seem that the very safety of the world depended upon stemming the migration cityward and encouraging men who are fitted for farming to go on with their job of producing food. There may or may not be a man-made solution to this problem. It is easy to theorize on how to keep folks on the farm but to actually keep them there is another matter. It is unlikely, except in possible cases of wide-spread crop failure, that the people of this country will ever suffer starvation. The abandonment of farms might so reduce the food supply as to require rationing for a period of a year or two, but in the last extremity self-preservation will force people back to the land and the crisis will have been averted. Over-production and under-production always act as automatic checks upon each other.

But there is another aspect of the decline in rural population which should cause the nation deep concern. We may close our factories and send the workers into the fields to produce crops, or we may import Mexican and Japanese labor, but how shall we repair the break in our social and moral fabric caused by the shifting of population from farm to city? The rural community has often and correctly been called the "foundation of the democracy." In its obscurity the world's greatest men have been born. In its crude and poor environs genius is a daily discovery. The rural community has for ages past been the crucible where science, invention, art and religion have had their rude beginnings. We do not attempt to explain in this editorial why this is true. We only know that it is true. History furnishes the proof. We also know that this foundry where the instruments of progress are forged must be strengthened if we are to gain new and greater achievements. The migration cityward must be stemmed. The community spirit must be developed. Rural communities must be brightened and enlivened to attract the younger folks and keep them there. The children of the country must be impressed with the fact that the glamour of the city is like the pot of gold at the end of the rainbow. Its glitter can never bring contentment. Life in the country can be made as attractive as life in the city, and when that is done the migration to the city will be halted.

The Candidates

JONES got the best of Sam Seeds in a horse trade some years ago and Sam never got over it. Now Jim is a candidate for sheriff of Podunk county, and he'd make a right smart sheriff too, but Sam, who is some pumpkins in his community doesn't intend to let Jim get the nomination if he can help it. So he's out working for that good for nothing Ed. Edwards who never earned an honest dollar in his whole life and who if he got his just deserts ought to be jailed instead of jailer.

Sam also has it in for the independent candidate for Governor. Seems that once upon a time this gentleman defeated one of Sam's fourth cousins for town constable and the Seeds family never quite forgave him for thus robbing them of the chance to acquire official honors. And so while the independent candidate for Governor is the only real man in the bunch of candidates he'll have to struggle along without the support of the Seeds family.

Every community has its Sam Seeds. That may not be his real name, but you can spot him when he talks and reveals his narrow prejudices. He is the same type of individual who a few years ago voted for Bob Boozer because Bob was a friend of the saloon, and in Sam's eyes that was the all important issue upon which the country must survive or perish. Or mebbe he is the same fellow who didn't believe in war, or who painted his neighbor's barn yellow because he didn't believe in war, or who spanked his wife for attending a woman suffrage meeting. Anyway he's the type of American citizen who believes that a man must be all good or no good; who cannot understand why all people do not think alike with him, and has no use for anyone who differs with him in the smallest detail.

Some months ago a man came to my office to remonstrate against a criticism that had been published against a man holding a position of influence in a farm organization. He said, "I have no use for that man personally. We have been enemies for some years. But I do think that he is the best man obtainable for the job he is holding and I am willing to forget my personal grievances in order to keep him there." Naturally we admired that gentleman for his broad-mindedness and outspokenness, and we wished that all might be able to put aside their petty personal grudges for the common good.

We are approaching another primary election. Nearly every man who takes an interest in political affairs will have some objection to offer to some of the candidates who present themselves to the voters. It is right that the voters should scrutinize these candidates. It is right that they should weigh their previous acts and public records if they have any. It is right that they should know beforehand what qualifications the various candidates have to fill the position they seek. But too many voters make mountains out of mole hills. A trifling objection to one candidate often leads them to vote for another of far less capacity. Personal prejudices are too often permitted to warp a voter's judgment. The average voter is too prone to consider his own individual welfare instead of the welfare of his neighbors and the state in general. A certain amount of selfishness in choosing public servants is excusable but it should not be the dominating factor. The man who gives promise of best serving the interests of his constituents as a whole is generally speaking the safest man to vote for.

Trading at Home

DOES IT PAY to trade with mail order houses? Does it pay to send money hundreds of miles to firms whom you do not know to purchase an article you have never seen, and take the chance that your money may be lost in the mail, the goods be delayed in transit, or not be what you expected? Examination of scores of complaints over mail order transactions that have been brought to our attention convinces us that it does not pay to buy of a Chicago or New York mail order house when the merchant of your home town can furnish the goods at a reasonable price.

We have complaints covering almost every conceivable kind of purchase. Shoes, clothing, paints, roofing, incubators, books, plows, furniture, pumps, cream separators, etc. The purchases represent in the aggregate several thousand dollars. Of course, we are securing a satisfactory settlement in most instances and are mighty glad to be of service in this respect, but we cannot help but think that in the majority of cases our subscribers would have been much better off had they gone to their local merchants where the goods are on display, where credit can usually be had if needed and where if not satisfactory the goods can be returned the next day and the money refunded.

The price tags in the catalogue books are alluring. The pictures, done up in attractive colors are attractive, but after all does it pay to patronize them? Occasionally you get a purchase with which you are satisfied, but observation convinces us that the average tranaction between the farmer and the mail order house entails a dispute or a grievance of some sort which costs the farmer time, money and patience.

A good deal could be said about the failure of the local merchants to live up to their responsibilities in meeting the needs of the farmers with satisfactory goods at satisfactory prices. Many merchants are merchants in name only. They do not try to attract the farmer's trade. They make no effort to give good service and conduct their business so as to be able to sell at a reasonable margin over the cost of the goods. We hold no brief for this type of merchant, but the average country merchant who will go half way in meeting the farmer, is we believe entitled to the trade of the farmers in preference to mail order concerns who pay no taxes and have no interest whatever in the local communities.

The country merchants are absolutely dependent upon the farmers. The farmers, in a lesser degree perhaps, are dependent upon the merchants. It ought, therefore, to be to their mutual interests to co-operate with each other. Just as no merchant could exist in a community deprived of its farmers, no farmer would care to live in a community depriced of its merchants. The farther farms are located from trading centers the less desirable they are. The farming communities would be in a sad way if the people who inhabit them should suddenly divert all their trade to mail order concerns and force the merchants of the villages to close their doors. This argument may not deter farmers from buying their supplies from mail-order concerns, but it is nevertheless one that is deserving of careful consideration.

What the Neighbors Say

AUTHOR OF AMENDMENT REPLIES TO FERRIS

The statement of ex-Governor Ferris demands an answer owing to his high position as an educator, statesman and lecturer.

We want to be very clearly understood on this subject—that our sole aim in this movement is complete separation of church and state. We charge the opposition with stirring up religious hatred by constantly and consistently crying "religion" "religion" "religion" and nothing but "religion" when it is not religion at all that is at stake. We have never attacked the Roman Catholic or any other religion as a religion. Our explanations of them, have been called forth by their interference in American politics. Our interest in the public school lies in the fact that they are the very cradle of Democracy, and upon the proper upbringing of our youth rests the salvation of our institutions.

Prof. Ferris says that the proposed amendment has for its object the closing of various denominational schools. This we admit is true, inso-far as it refers to five hours a day, for 160 to 180 days in the year—during which the children will be required to attend public school.

Surely, Prof. Ferris, neither you nor your allies will deny the state the right of compelling attendance in a school which was organized for the sole purpose of making Americans, and to teach its future citizens to learn to live together. The Professor says "Why should quarrels among churches be kept up any more than quarrels amongst nations?" What church is is that claims temporal power as well as spiritual and when checked in its pursuit of temporal and financial gain, begs to be relieved from "religious" persecutions? Had Mr. Droulard and Mr. Gildray of Erie, been raised in a public school they could never have been induced to join a party to go to another community, eight miles away, for the purpose of breaking up of a religious meeting. They would not have lost their lives, nor would they have been a never-dying blot on their families, to say nothing of the heartaches caused the community as a whole.

Prof. Ferris also speaks of the supreme loyalty of the parochial school adherents. Until this time, we have refrained from entering into this phase of the controversy, but when such a learned gentleman as the ex-governor advances that as an argument, we must present to him a few of the facts.

Religious organizations conducting parochial schools and having for their cardinal loyalty to the flag which gives them bread and protection, should function the same the world over, under any and all flags.

We regret exceedingly being forced to say these unkind and unpleasant things. During the world war there were many priests in Italy shot for their conspiracy on the Piave (which all but cost the Allies the war) and for sinking of two Italian battleships, Benedetto Brin and Leonardo Da Vinci, in which 248 men lost their lives; the Pope's chamberlain, Monsignor Berlach, is now a fugitive from justice from Italy. The parochial school in parts of Ireland, Quebec and Australia are the only parts of the British Empire that produced traitors to that flag during the World War; and if they were, as they have often boasted, fighting a war for Democracy, the same principle was at stake in Great Britain and Italy as in the United States.

The German Lutherans have furnished more ministers that have been convicted for disloyal acts than all other denominations in the land, and they are the only religious denomination conducting foreign parochial schools that have taken the question into court to fight a legislative act when the legislature of Nebraska passed a law, compelling elementary instruction to be in English.

Prof. Ferris says the parochial schools teach all their subjects in English. We have a Polish Roman Catholic school here in Detroit, where not a word of English is spoken.

Our Civil War is not entirely forgotten, and the figures of the pension officers of the U. S. is just about complete, and it shows that practically 90 per cent of the desertions from the Union Army were Irish Roman Catholics, after the Pope recognized the Confederate states and gave his beloved child, Jefferson Davis, his papal blessing.

Out of 144,000 Irish enlisted or drafted in the Union Army during the Civil War, 104,000 deserted.

The names of tens of thousands of people who signed the petitions for the school amendment were printed in lists, tacked up on the walls of churches, read out from the pulpits and instructions were given to the congregations to boycott those people. Is this the kind of Christian education Prof. Ferris is going forth to defend?

Ex-governor Ferris infers that other denominations are a party to the objections to this Americanization amendment. Let us hear who they are. Name them and let them advance their reasons for so believing.

The distinguished gentlemen is the only one who has come out against the amendment, who has offered to "go forth and show his friends that this amendment is cowardly and un-American."

To Prof. Ferris, Father Command, Rev. Cochran, Bishop Gallagher, Dr. Vance, Charles McKenny, Frederick C. Martindale, Dr. Hall, and all other parochial school proponents, we make the following proposal, which we recommend they accept. Inasmuch as Prof. Ferris says this amendment is cowardly and un-American, we will let the reader supply the proper term to be applied to Mr. Ferris, if he does not accept the following offer to give all the people both sides of the question and let the people decide for themselves. Our offer is as follows:

1st.—Each side writes 1,500 words of declaration of principles.

2nd.—Exchange briefs.

3rd.—Each write 1,500 words in rebuttal.

4th.—Publish them together, each paying half of the expense and receiving one-half of the copies.

We believe the whole problem could be settled by people reading both sides of this question.

If Mr. Ferris and the others were sincere when they made their respective statements, they will unquestionably accept our offer.

The gentlemen mentioned above are rather distinguished; while the writer, not even an eight grader, will undertake to present our side of the question, in the firm belief that the superior justice of our cause, will more than offset the fine rhetoric and sophistry of the above mentioned distinguished gentlemen and scholars. —*Jas. Hamilton.*

RIGHT TO EDUCATE CHILDREN IN PAROCHIAL SCHOOLS

Having just read the letter of J. B., of Kent county about "Abolish Parochial Schools" must say that he is either narrow-minded or has just looked at one side of the question.

This country fought once for freedom of right and religion and it is our right to educate our children in a parochial school if we wish. About things being taught behind closed doors, that is not so, at least in the Catholic parochial schools. I am of the opinion that the other parochial schools are the same. You do not have to go to the parochial schools of any sect to find the pro-Germans. Right in our own country our worst pro-Germans are people educated in public schools. I do not think that any school has any influence on any child's patriotic opinion if the parents are true Americans so are the children no matter what they are taught in school.

In our parochial school at Vernon you will find as many non-Catholics as Catholics and our friend J. B. would be welcome to visit that school at any time. I think you will find the scholars of these schools farther advanced than in our rural schools and our children are taught music, cooking and can take up any branch or subject they wish. Of course they are taught our religion, but that is our right. We do not compel non-Catholics in our schools to accept our faith but they must respect it while in school. Our children are also taught to defend our country and our boys were the first to take part in this late war. So do you think when we know that all these reports are false about our schools that we would stand by and see our schools abolished. I say no, nor could you expect us to. So let us look at both sides instead of reading some books or papers that tell these false stories about our parochial schools.

Our public schools we must have and will give our help to maintain them. But we want our parochial schools, too. Every child should be in regular attendance at some school In our school at Vernon the scholars must be there every day as the Sisters are very strict about a child being absent without a good excuse. Hope to see more express themselves on this matter. We like the M. B. F. as it is the only paper for us.—*E. B., Isabella County.*

A TEACHER'S VIEWS ON THE SCHOOL AMENDMIDENT

Speaking of the school amendment, no, you are not "lined up on the wrong side of this question," as Mr. Lamb says you are. But I believe he is the one who is sadly misinformed. You need not consult a priest in any one of the Catholic faith on this question but only follow the dictates of an unprejudiced conscience, and it will tell any true American follower of Washington and Lincoln which side to choose in the controversy.

Mr. Lamb need not worry about the Pope forcing himself on any one, much less, bigots. He is only zealous that Catholics in America receive the inalienable right to life, liberty and the pursuit of happiness.

Catholics have no fault to find with the public schools. They are excellent and our nation could not endure without them. In fact I am a teacher in one of them. I am also a graduate of the hated parochial schools. And in view of that fact I am still a true blue American. I do not feel that my education has been impaired by my attendance at the parochial school.

Parochial teachers are efficient in every respect. They teach the very fundamentals of Americanism, namely, love of country and brotherly love. They do not teach the latest fads in dancing, sex study, etc., but they do teach religion. And that is the only thing that bigots really see wrong with the parochial schools.

My farmer friends, this amendment spoken of is a strict violation of the constitution, also of the North West Ordinance of 1787, which provides that "schools and the means of education shall forever be encouraged." Parochial schools as well as public are "schools and the means of education" and who has the right to abolish them? I should say "No one has." We haven't too many schools that we can afford to close any. Let us be fair-minded! We need public schools, parochial schools and every school that can give a boy or girl an education.

It was only a few months ago that our boys went overseas to rid foreign countries of autocracy. And while our boys were enduring the horrors of war the very seeds of autocracy were sown here in Michigan. The falling heroes in the great war have thrown the torch of education, religious liberty and rights of property to us to hold high, and if we break faith with them who die they shall not sleep though poppies grow in Flander's fields.

Lastly, it has been officially announced by Secretary of State Vaughan, that the school amendment is unconstitutional and therefore, will not appear on the ballot in November. Now I do not know what Mr. Lamb will do for his "happy time" he is planning on having in November. But I know of two authentic dates in November for every American to celebrate—Armistice Day and Thanksgiving Day.—*S. M., Mt. Pleasant, Mich.*

COX MAKES A PROMISE

The promise made by Governor Cox that if elected he will appoint a "dirt farmer" to be secretary of agriculture was made in part, of course for its value in the campaign.

Secretary Houston, who recently vacated the office, is an educator who specialized in economics and college administration. In one aspect that is not bad preparation for a secretary of agriculture, for the department is an educational establishment among other things. Secretary Wilson, who held the office for so many years, was a farmer part of the time. Before him came Norman Coleman, the first of all, and he was a farmer before he was secretary and for many years afterward, though he probably gave more time to his farm paper than to his farm. All of these men had experience that was valuable in office and some of the experience that they did not get in farming was as valuable as any that was acquired while they were next to the land.

The fact is that the secretary of agriculture ought to be an all around man and an administrator. He ought to have the kind of mind that will understand farm problems and if he has had direct experience with farm problems so much the better. If he has had no other kind of experience he may find that taking charge of a department that numbers its employes by the thousand is not the kind of a job he is cut out for.

The problem of finding a good secretary of agriculture is like that which every great corporation faces when it is looking for a president. Technical men of every grade and kind, whether they be dirt farmers, steel experts, automobile engineers, actuaries or what not can be found, but the man who can take all of the experts and all of the men who are not expert and make them work together to some useful purpose is rare and precious. Such a man should be secretary of agriculture, and if he is a practical farmer actually engaged in farming so much the better, but the possibilities are that any man who is big enough for the job will have a variety of interests, of which farming will be only one.—*Detroit Free Press.*

WANTS CAMPBELL NOMINATED

I do not know that Milo D. Campbell will support the man that I hope will be president.

I do not know that he could have prevented the grasshopper plague in Michigan.

I do know that I like some of his views.

I do know that I think he will make Michigan a good Governor.

I do know that I have a small fruit farm in Benzie county Michigan.

I do know that I have not got a vote in Michigan.

I do know that I want to support Milo D. Campbell, therefore the enclosed $10 to A. B. Cook for Campbell-for-Governor fund.—*Walter C. Gunn, Chicago, Illinois.*

The Farm Home
A Department for the Women

EDITED BY CLARE NORRIS

How I Made Threshing Day Work Lighter

Write and tell me how you did it. Threshing day is one of the busiest days in the year for the farm wife if she has the men to a meal and if any of our readers have found a way to lighten the work on that day would like to pass it on to others. Maybe you do certain things the day before or you may have certain menus or some other way that reduces the work. Just write me a common letter telling how you do it. For the best letter received on this question I will pay $2, and the second best letter $1.—CLARE NORRIS.

THE FACT that the bankers are tightening up on their loans does not necessarily mean a panic—in fact they are very optimistic about it—they say, and it certainly sounds reasonable—that no more money will be lent to firms or corporations for the buying of luxuries—unless they have sufficient capital to advance the price or pay when it is due—they will have to stop buying. This applies to high priced articles of clothing, toilet articles, etc.

In the past two years the stores have loaded up—prices have soared—the people have paid the price, and the stores were able to meet all their obligations with few failures. Now the tide has turned—the stores which are stocked with high priced silks, etc., are all advertising sales. Oh, don't let their advertisements delude you—it isn't that they want to reduce the high cost of living, but that the banks are calling for their money—and they must meet their obligations—credit will not be longer extended and at last they are willing to unload these goods for about what they cost them—and as time goes on we will have more and more sales of this kind.

The staple articles will not be much reduced in prices, so say the bankers, for it costs too much to produce them in these days of the high cost of labor—but the luxuries are bound to be curbed. It may be a stiff dose of medicine for some of the profiteers, but we will be better off without those gougers.

If you want to build a home for yourself, and have the land all paid for and about thirty per cent of the amount needed to build and you are responsible—but builders who have been building to speculate—to sell at inflated prices have found that they can't get a dollar of credit at the banks, and private individuals who used to be able to borrow 50 per cent of the valuation of their building after the place was all clear, have found that they cannot get such a high loan now. This is ing felt in the building world, and is doubtless responsible for some of the shortage of houses, but not wholly, for while materials are as high as now, unless one has unlimited means, can do the building themselves. or are driven to it, they will not build while labor and material remain so high.

And it is the women of the household to whom this problem of housing their families satisfactorily—of making improvements appeals most strongly, therefore we shall watch the trend of affairs with a great deal of interest.

POLITICAL CALENDAR FOR THE BALANCE OF 1920

"Women get into the parties!"

August—Primary election, last Tuesday (31st). To nominate candidate for the office of governor, lieutenant governor, state senators and representatives, congressmen.

All elective county offices except county commissioner of school. To choose delegates to county convention.

September and October—Re-registration of all qualified voters in townships and cities with a population of 10,000 or over; in others if so ordered by local legislative authority. This re-registration must be completed on the third Saturday preceding the next general November election (October 16, 1920.)

October—County convention, at the call of the county committee

To chose delegates to the state convention. State convention at the call of the state committees.

To nominate candidates for state offices not provided for in the August primary election.

To nominate presidential electors.

November—General election, first Tuesday after the first Monday, 2nd.

To choose—

Presidential electors.

Congressmen.

State officers.

State senators and representatives.

County officers.

(Arranged by Bertha C. Buell, of Citizenship Committee, League of Women Voters, Headquarters 106 Pingree Ave., Detroit, Mich.)

Weekly Cheer

Sing and the world's harmonious,
Grumble and things go wrong;
And all the time
You're out of rhyme
With the busy, bustling throng.

HOME COOKING

(Contributed by Miss Matheson)

THE MOST common ways of preserving foods are canning, drying, preserving, pickling and jelly making. Fruits for a good many years have been put away for winter use, using one of these methods for a number of years. But vegetables that could not be stored in the cellar has had to be either sold or thrown away. The great demand for food, for the last few years, has taught us many things and the canning of vegetables has taken a decided increase.

The cold pack canning has been taught throughout the country and if the directions are carried out carefully there is no reason why any one couldn't make a success of it. Just be careful in selecting your vegetables never using them if they have stood over a day. And one thing, don't be frightened if the can is not full of water after you remove if from the canner. The vegetables will keep; never fill the can with water, let it remain as it is.

The question that we are facing as we come to the canning season is the high cost and shortage of sugar, and it certainly is a serious one. For the use of fruits in our diet is very necessary for they contain acids and mineral salts that help purify the blood and build up the bony tissues of our bodies.

In a great many cases, especially in the making of preserves and jams syrup can be used in place of sugar with good results. And in canning there are a number of fruits that can be put up without sugar, such as peaches, plums, cherries and berries of all kinds except strawberries and red raspberries. The can should be opened a short time before serving and the sugar added and in many cases I have found the fruit has a more natural flavor, and it doesn't take as much sugar.

In using syrup in jelly you must be very careful because it is apt to get waxy but in conserves and jams it works very nicely.

Peach Conserves

3 pounds of peaches.

2 small oranges (rind and juice.)

1 cup dates, cut in small pieces.

1-4 lb. walnut meats.

1 1-2 cups syrup (commercial.)

1-2 cup seeded raisins.

Remove skins from peaches, stone and cut in pieces. Add syrup, raisins, finely chopped oranges and dates and water to cover. Cook slowly for about one hour until thick. Add nuts five minutes before removing from the fire. The dates may be omitted. Put in jelly glasses and seal with paraffin.

Ginger Pear

1-2 lb. ginger root.

4 oranges, 3 lemons, juice and rind.

8 lbs. sugar.

1 pint water.

8 lbs. pears, weighed after pared and cored.

Cook the ginger, orange and lemon peel with the water until tender then add the sugar, orange and lemon juice and cook until the sugar is dissolved then add the pears chopped coarse and cook slowly for two hours. Seal in cans or jelly glasses.

BUTTONS AND MATCH BOXES GREAT TOYS FOR KIDDIES

By Carolyn Sherwin Bailey

DO YOU remember that long ago day when you put the dolls and dishes up in the attic, because you had outgrown them, and how you shed a tear of two because you had? Never mind; I know a young lady who earns a lot of pin money making toys that sell. There are always the kiddies at home or next door for whom you can make play materials.

Button Dolls

Get those white bone buttons that have two large holes for sewing them on; they are the heads of these quaint paper dolls. Glue a button to a body that you cut from rather heavy cardboard. The holes in the button, with the cardboard back of them allow for painting a pair of most expressive eyes, and the other features are painted on the bone itself. Dress these button dolls in character using other scraps or some crepe paper. They lend themselves to all sorts of different characterization, such as babies, kewpies, soldiers, clowns, fairy tale heroes and heroines, old folks.

Used with permission Edgar A. Guest.

There's a wondrous smell of spices
In the kitchen,
Most bewitchin';
There are fruits cut into slices
That just set the palate itchin';
There's the sound of spoon on platter
And the rattle and the clatter;
And a bunch of kids are hastin'
To the splendid joy of tastin':
It's the fragrant time of year
When fruit cannin' days are here.

There's a good wife gayly smilin'
And perspirin'
Some, and tiring';
And while jar on jar she's pilin'
And the necks o' them she's wirin'
I'm a sittin' here an' dreamin'
Of the kettles that are steamin'
And the cares that have been troublin'
All have vanished in the bubblin'
I am happy that 'Im here
At the cannin' time of year.

Lord, I'm sorry for the feller
That is missin'
All this hissin'
Of the juices, red and yeller,
And can never sit and listen
To the rattle and the clatter
Of the sound of spoon on platter.
I am sorry for the single,
For they miss the thrill and tingle
Of the splendid time of year
When the cannin' days are here

Match Box Furniture

The small boxes, lined with thin wood, that hold matches will make the foundation for delightful dolls' house furniture. Glue, scraps of cretonne and chintz in a small flowered pattern and hand silk are all that you need.

Glue together three or four match boxes so that the boxes will pull out like drawers; finish with a cretonne ruffle and a piece glued to the top, and you have a bureau.

One of the boxes with the cover glued upright to the end makes the dolls' bed. Make diminutive bedding for it, a valance of cretonne, and a curtain of the same for the head.

Cut one of the boxes in half, glue it, inverted inside the cover and you have a high backed chair that you will be able to upholster in silk or cretonne charmingly.

What are the Women Asking?

We want to know what the farm women of Michigan are thinking about—what questions they are asking—about house, farm, their husbands or their children problems. Let's get this big family of 60,000 women readers talking it over.

In order to give you an idea to start on I am suggesting "How I Made Threshing Day Work Lighter." To get live questions which women want discussed on this page I will pay $1 for each question I use for a future prize letter contest.

FOOD FOR GROWTH

FROM A bulletin issued by the department of interior the following suggestions have been selected as important to consider in the selection of food best suited for the growth of the child.

The child is the adult of tomorrow. The kind of food a child has today determines, to a considerable extent, the fitness of the future citizen.

Good food habits should be established at an early age. Meals should be taken at regular times; plenty of water should be taken between the meals; a child should be taught to like things that are good for him; plenty of time should be allowed for meals; a child should not be allowed to eat when angry or cross.

A child should not be allowed to make his entire meal from one or two articles. He needs a variety of foods to supply all kinds of growing material.

Milk should form an important part of the food for the growing child. No other food can take its place. A child over five years of age should have at least three cups a day. Milk slightly warm is more easily digested than cold. If a child rebels against taking milk alone, it may be given in the form of cocoa, milk soups, custards, etc. Tea and coffee should not be given to children at all.

Very little meat need be given before the seventh year where plenty of milk and an egg a day are included in the diet of the child. Do not allow more than two ounces daily for a child from seven to ten years; three ounces daily for a child from ten to fourteen years.

When meat and eggs cannot be used because of scarcity or cost, the diet should contain a quart of milk a day with pea or bean soups, spinach, and other green vegetables, oatmeal and dried fruits.

"HEARTS OF THREE"

(*Continued from page* 11)

—alas, that Leoncia should ever and always arise in my thought between her whom I have and herself whom I shall never have!

"More magic," the Queen murmured, as Francis, getting Bascom's office, said:

"Mr. Bascom will undoubtedly arrive back in half an hour. This is Morgan talking—Francis Morgan. Mr. Bascom left for his office not five minutes ago. When he arrives, tell him that I have started for his office and shall not be more than five minutes behind him. This is important. Tell him I am on the way. Thank you. Good bye."

Very naturally, with all the wonders of the great house yet to be show her, the Queen betrayed her disappointment when Francis told her he must immediately depart for a place called Wall Street.

"What is it?" she asked, with a pout of displeasure, "that drags you away from me like a slave?"

"It is business—and very important," he told her with a smile and a kiss.

'And what is Business that it should have power over you who are a king? Is business the name of your god whom all of you worship as the Sun God is worshipped by my people?"

He smiled at the almost perfect appositeness of her idea saying.

"It is the great American god. Also, is it a very terrible god and when it slays it slays terrible and swiftly."

"And you have incurred its displeasure?" she queried.

"Alas, yes, though I know not how. I must go to Wall Street——"

"Which is its altar?" she broke in to ask.

"Which is the altar," he answered, "and where I must find out wherein I have offended and wherein I may placate and make amends."

His hurried attempt to explain to her the virtues and functions of the maid he had wired for from Colon, scarcely interested her, and she broke him off by saying that evidently the maid was similar to the Indian women who had attended her in the Valley of Lost Souls, and that she had been accustomed to personal service ever since she was a little girl learning English and Spanish from her mother in the house on the lake.

But when Francis caught up his hat and kissed her, she relented and wished him luck before the altar.

After several hours of amazing adventures in her own quarters, where the maid, a Spanish-speaking French woman, acted as guide and mentor, and after being variously measured and gloated over by a gorgeous woman who seemed herself a queen, and who was attended by two young women, and who, in the Queen's mind was without doubt summoned to serve her and Francis, she came back down the grand stairway to investigate the library with its mysterious telephones and ticker.

Long she gazed at the ticker and listened to its irregular chatter. But she, who could read and write English and Spanish, could make nothing of the strange hieroglyphics that grew miraculously on the tape. Next, she explored the first of the telephones. Remembering how Francis had listened, she put her ear to the transmitter. Then, recollecting his use of the receiver, she took it off its hook and placed it to her ear. The voice, unmistakably a woman's sounded so near to her that in her startled surprise she dropped the receiver and recoiled. At this moment Parker, Francis' old valet, chanced to enter the room. She had not observed his carriage, and, so immaculate was his dress, so dignified his carriage, that she mistook him for a friend of Francis rather than a servitor—a friend similar to Bascom who had met them at the station with Francis' machine, ridden inside with them as an equal, yet departed with Francis' commands in his ears which it was patent he was to obey.

At sight of Parker's solemn face she laughed with embarrassment and pointed inquiringly to the telephone. Solemnly he picked up the receiver, murmured "a mistake," into the transmitter, and hung up. In those several seconds the Queen's thought underwent revolution. No god's or spirit's voice had been that which she had heard, but a woman's voice.

"Where is that woman?" she demanded.

Parker merely stiffened up more stiffly, assumed a solemner expression and bowed.

"There is a woman concealed in the house," she charged with quick words. "Her voice speaks there in that thing. She must be in the next room—"

"It was central," Parker attempted to stem the flood of her utterance.

"I care not what her name is," the Queen dashed on. "I shall have no other woman but myself in my house. Bid her begone. I am very angry."

Parker was even stiffer and solemner and a new mood came over her. Perhaps this dignified gentleman was higher than she had suspected in the hierachy of the lesser kings, she thought. Almost might be an equal king with Francis, and she had treated him peremptorily as less, as much less.

She caught him by the hand in her impetuousness noting his reluctance, drew him over to the sofa, and made him sit beside her. To add to Parker's discomfiture, she dipped into a box of candy and began to feed him chocolates, closing his mouth with the sweets every time he opened it to protest.

"Come," she said, when she had almost choked him, "is it the custom of the men of this country to be polygamous?"

Parker was aghast at such rawness of frankness.

"Oh, I know the meaning of the word," she assured him. "So I repeat: is it the custom of the men of this country to be polygamous?"

"There is no woman in this house, besides yourself, madam, except servant women," he managed to enunciate. "That voice you heard is not the voice of a woman in this house, but the voice of a woman miles away who is your servant, or is anybody's servant who desires to talk over the telephone."

"She is a slave of the mystery?" the Queen questioned, beginning to get a glimmer of the actuality of the matter.

"Yes," he husband's valet admitted. "She is a slave of the telephone."

"Of the flying speech?"

"Yes, madam, call it that, of the flying speech." He was desperate to escape from a situation unprecedented in his entire career. "Come I will show you, madam. This slave of the flying speech is yours to command both by night and day. If you wish, the slave will enable you to talk with your husband, Mr. Morgan—"

"Now?"

Parker nodded, arose, and led her to the telephone.

"First of all," he instructed, "you will speak to the slave. The instant you take this down and put it to your ear, the slave will respond. It is the slave's invariable way of saying 'number?' Sometimes she says it, 'Number? Number?' And sometimes she is very irritable."

"When the slave has said 'Number' then do you say 'Edystone 1292,' whereupon the slave will say 'Eddystone 1292?' and then you will say, 'Yes, please—' "

"To a slave I shall say 'please'? she interrupted.

"Yes, madam, for these slaves of the flying speech are peculiar slaves that one never sees. I am not a young man, yet I have never seen a Central in all my life—thus, next after a moment, another slave, a woman, who is miles away from the first one, will say to you, 'This is Eddystone 1292,' and you will say, 'I am Mrs. Morgan. I wish to speak with Mr. Morgan, who is I think, in Mr. Bascom's private office.' And then you wait, maybe for a half minute, or for a minute, and then Mr. Morgan will begin to talk to you."

"From miles and miles away?"

"Yes, madam—just as if he were in the next room. And when Mr. Morgan says 'Goodbye,' you will say 'Goodbye' and hang up as you have seen me do."

And all that Parker had told her came to pass as she carried out his instructions. The two different slaves obeyed the magic of the number she gave them, and Francis talked and laughed with her, begged her not to be lonely ,and promised to be home not later than five that afternoon.

Meanwhile and throughout the day, Francis was a very busy and perturbed man.

"What secret enemy have you?" Bascom again and again demanded, while Francis shook his head in futility of conjecture.

(*Continued next week*)

CHEERING WORDS

I have been a reader of the M. B. F. for several years. I consider it a valuable paper as it stands for the interests of the farmer and not the millionaire. It is always a welcome visitor in our home.—*B. O., Lapeer County.*

THE SIGN OF ROWENA QUALITY

Positively the Finest Flour Milled in America

The making of fine flour into bread—known for ages as the "staff of life"—is a more scientific process than most people realize. They take flour for granted. This can safely be done with

Lily White

"The Flour the Best Cooks Use"

because it is positively the finest article of flour that is produced in Michigan.

Look for the ROWENA trade-mark on the sack

LILY WHITE has been the reliance of real home-making women for three generations. Countless women have made, and still are achieving, proud reputations for their skill at baking, by using this flour.

The choicest selection of wheat is used. It is subjected to numerous cleanings and scourings before being ground and milled. An astonishing amount of dirt and undesirable materials are eliminated. Completed, after close expert inspection at all stages, the flour is supremely fine, white, clean and beautiful. That is why it makes such delicious, palatable and enjoyable bread, biscuits and pastry.

Be a LILY WHITE FLOUR user. It is guaranteed without restriction.

VALLEY CITY MILLING CO.
GRAND RAPIDS, MICHIGAN
"Millers for Sixty Years"

The Children's Hour

DEAR CHILDREN: Only a few more weeks and then school begins. Are you sorry or are you glad? When I was little and lived on the farm it seemed as if the months during the vacation time was the shortest months in the year. Does it seem that way to you, boys and girls?

Boys, do you remember the story and pictures of Raymond Buckman and the cup which he won as Junior Champion Corn Grower of Michigan for 1919 that we printed in the front part of M. B. F. last May? He lived in Macomb county and raised one hundred and sixteen bushels of corn on an acre of ground, and was only twelve years old. Remember it? Well, I would like to have you boys write to me and tell me if you have a corn club in your neighborhood and if you belong to it, how your corn is growing and everything. If you don't have a corn club in your neighborhood tell me about what you have planted on the farm this year and what you are going to do with the money when you sell it.

Now girls, do you remember that in the story I just ask the boys about, there was a little story about the girl's canning club? How one girl canned over twelve hundred quarts in one year. If you have a canning club I would like to have you write me about it. If you haven't any such club but have canned something this summer tell me about it, will you?

If you don't remember the story I speak about ask papa or mama, or find the May first issue of the M. B. F. and look on page 4. Affectionately yours—AUNT CLARE.

EARNING MONEY

"YO-O-HO-O-O, Skin-n-a-a-y! Did you know that us boys, and the girls too, can win some of the money in the M. B. F.'s Big Gold Contest?"

Yes girls and boys, you can win the money as well as your mama or papa or your big brother or sister. Maybe you haven't read about it yet. In case you haven't I'm going to tell you something about it. We want to get a lot of new subscribers this month and are going to pay our readers, both children and grown-ups some money to get these subscribers for us. We have taken $100 and are going to divide it up into six prizes. The first prize is to be $50; the second prize, $25; the third, $10; fourth, $5; the fifth, $5 and the sixth $5. Now as to what you have to do to earn this money. First, the subscribers you are to get for us must be people that do not take M. B. F. now. Second, they are to give you $25 for which they are to receive this paper from now until January 1, 1921. Third, you must send the money you get and the names and addresses of the people who gave you the money to us every Saturday. And the last names you send us must reach us by the first day of September. Then we add the names up and the one that sent in the most names and money gets $50 and the next one gets $25, and so on.

"$100 in prizes! Gee, let's get busy."

OUR BOYS AND GIRLS

Dear Aunt Clare—This is the first time I have written to you. My father takes the M. B. F. and likes it fine. I have seven brothers and one sister. I am eleven years old. Lucy Max, Alger, Mich.

Dear Aunt Clare—I am a girl ten years of age. I will be in the sixth grade. This is the second letter I have written to you. I would like to see my letter in print. Miss Grace Groh, Pinconning Mich.

Dear Aunt Clare—I have never written to you before. I am a girl 9 years old. I will be in the sixth grade at school next year. For pets I have two cats. We take the M. B. F. and like it very much. Hoping to see my letter in print. Miss Cory Anderson, Williamston, Mich.

Dear Aunt Clare—I have never written to you before. Iam a girl 9 years of age. I will be 10 years old the 8th of March. We have 5 cows and two horses and 3 calves. For pets we have a dog and three cats. Will close for this time. Mildred Wheeler Fife Lake, Mich.

Dear Aunt Clare—I am a girl 12 years old and am in the eighth grade next year. I am sending a picture of a little overall boy. I live on an 80 acre farm. We have 3 head of horses and 5 milk cows and 6 calves. For a pet I have a dog named Buster. Leota Lamb, Lake City, Mich., R 2.

Dear Aunt Clare—I like the Children's page the best of all. I will be in the 4th grade at school next year. I have two brothers and one sister. I live on a farm of 70 acres. An aeroplane lit on my father's field about two weeks ago. I hope my letter will be in print. Adaline Alice Zylman, Vicksburg, Mich.

Dear Aunt Clare—I have never written to you. I am a girl ten years old. I have five brothers and three sisters. I will be in the fifth grade next year. My father takes the M. B. F. and likes it very well. I like to read the Children's page. I live on a 100 acre farm. As my letter is getting long I will close, hoping to see my letter in print. Paulina Weber, Freeland, Mich.

Dear Aunt Clare—This is the first time I have written to you. We take the M. B. F. and like it very much. We live on an 80 acre farm. For my pets I have a calf and a pig. I hope to win a prize for my horse and see my letter in print. I am a boy 12 years of age. Harry Madzelna, Mesick, Mich., R 1.

Dear Aunt Clare—I have never written to you before. My father takes the M. B. F. I like to read the Children's page. I am a girl 12 years old. I go to school nearly every day. I will be in the seventh grade next year. For pets I have three cats. I will close hoping to see my letter in print. Clara Weber, Freeland, Mich.

Dear Aunt Clare—I am a girl 15 years old and am I too old to join in with the rest of you? I hope to be a school teacher when I grow up. I am in the tenth grade and like to go to school very much. I can tat and crochet and do some plain knitting. I would like to exchange some tating patterns with some of the girls and I'll send them some of mine. We live on a 40 acre farm. For pets I have a dog and four kittens. We have a car and my brother has a motorcycle with a side car and sometimes he takes me to ride with him. My father takes the M. B. F. and likes it very much. Will some of the girls write to me? I will be very glad to hear from them. Will close with best wishes to all. Fern Rosella Harrington, Dorr, Mich.

Dear Aunt Clare—I am 12 years old, and in the 7th grade. I live on a 40-acre farm a half mile from town. I am enclosing Mutt and Jeff which I have drawn myself.—Hazel Johnson, Newaygo, Michigan.

Dear Aunt Clare—I am a girl 9 years old. I will be in the fourth grade next year. My father takes the M. B. F. and likes it very much. I live on a farm of 90 acres. We have 3 horses and 6 cows and 16 pigs. This is the first time I have written to you. I hope to see my letter in print. Bernice Sartwell, Hesperio, Michigan, R 1.

Dear Aunt Clare—I am a girl nine years old and I live on a farm of 120 acres. I read the letters in the M. B. F. and enjoy reading them very much. I live with my grandma. I help all I can. I am learning to make cake and to iron. We have seventy little chickens. I help take care of them. I am in the fourth grade at school. I hope to see my letter in print. Gladys Gulick, Shaftsburg, Mich.

Dear Aunt Clare—I am a girl eleven years old and I like to read the M. B. F. especially the Children's Page. My father takes the M. B. F. and likes it very much. I do not live on a farm. I live in town. I will be in the sixth grade next year. I hope to see my letter in print. This is the first time I have written to you. I will have to close to leave room for others. Elsie Wells, Midland, Mich.

Dear Aunt Clare—I have just been reading the boys and girls letters and am very interested in the Children's Hour. I wrote once before but my letter was not in print. I am a girl nine years old and in the 5th grade. For pets I have three rabbits and two cats. I have one brother and one sister. I will close, hoping to see my letter in print. Lydia Mae Osborne, Mason, Mich.

Dear Aunt Clare—This is the first I have written you. I am eleven years old and will be in the sixth grade next year. We take the M. B. F. I read the Children's Hour and enjoy it very much. We girls went in swimming the other day and the pony went in with us. He enjoys swimming as much as we do. I am sending a picture of him and we three girls in the cart. Virginia Sutton, Bancroft, Mich., R 1.

Dear Aunt Clare—This is the first time I have written to you. My father takes the M. B. F. and likes it fine. I am eleven years old and weigh 103 pounds. I help my father with the haying. We own a farm of 250 acres. I have two sisters and two brothers. We have an Overland car. For pets we have five kittens and a dog. I hope to see this letter in print. Olive Fraleigh, Jeddo, Mich.

Dear Aunt Clare—This is my first letter to you. I am in the third grade and I am 8 years old. I have one mile and a half to go to school. My father takes the M. B. F. and likes it fine. We have 200 acres of land, 6 horses and 12 cows, 4 calves and 44 sheep. We keep one hired man. We live 16 miles from Muskegon. Will close, hoping to see my letter in print. Mildred Pierson, Muskegon, Mich.

Dear Aunt Clare—This is the first time I have written to you. I like to read the boys and girls letters very much. I live on a 120 acre farm in Fraser township, Bay county. I read the following little verse in a paper the other day and I thought I would send it in. Perhaps some of you would like to read it. If this escapes the waste basket I will write again and send in another one. Beatrice McKeon, Pinconning, Mich., R 2.

'T'was midnight on the ocean
Not a street car was in sight
The forest fires burned dimly bright
It rained all day that night.
'T'was a winter's day in August
The snow was sleeting fast.
When a barefoot boy with shoes on
Stood sitting in the grass.

Dear Aunt Clare—I am a girl 11 years old and in the 6th grade. For pets I have a dog and a cat. We live on a 20 acre farm and we also have 3 horses and 2 cows. I am going to write a true story of my wren. Will close hoping to see my letter in print. Miss Louise Stanley Bangor, Mich., R 2.

My Wren and I

Once I heard a wren out by the garden and it was trying to find a place to build her nest, so I went and made a little wren house and put a pan on the post near by and nailed the house to the post and went back and sat down to watch and soon she had built her nest and layed her eggs, and then it didn't seem long before she had hatched her eggs, flew away and now she comes every year.

Muskrat Champion Builder; Two Homes Every Year

By J. H. MILLAR

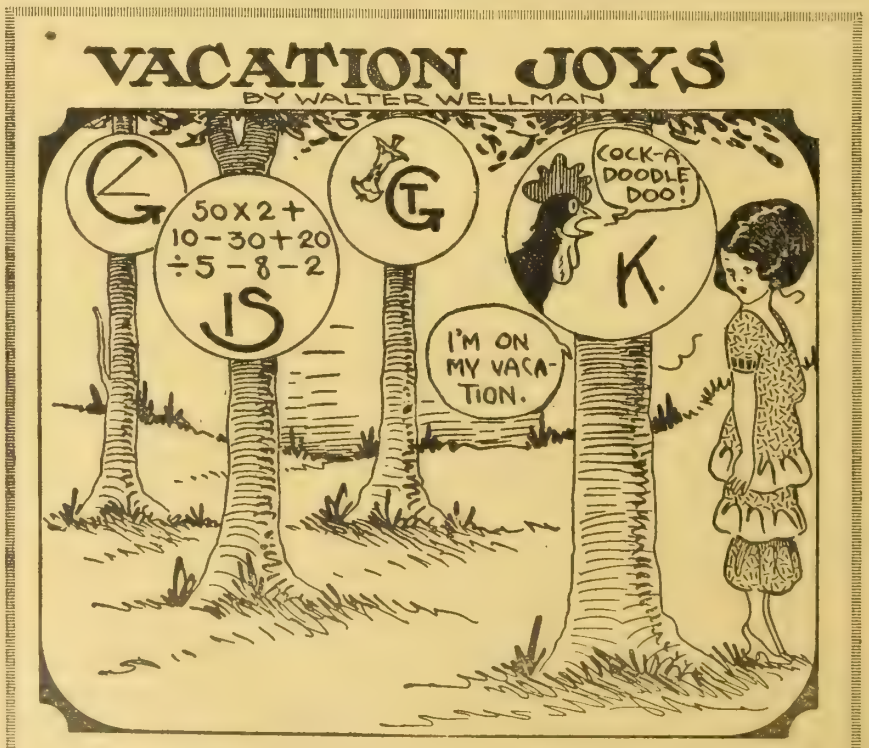
HOW WOULD you like to live in a house that is washed away every spring so that you would have to build a new one for the next winter? That is what the muskrat does.

He has two houses, though. In the summer he and Mrs. Muskrat live in a house dug out of the bank of a stream. He starts the entrance to his house below the water and digs up into the bank until he is above high water line. Then he starts making a sort of a chamber or room in which he and his mate can live. Sometimes these holes cause a lot of trouble. No end of dams and levees have been washed out because the water got to seeping through the holes leading to Mr. Muskrat's home and soon grew into a hole which wiped out the dam.

When winter comes, Muskrat and his mate travel to some swampy place where they and several of their relatives build another sort of a house, a little conical affair made of reeds and clay and looking much like the beaver's house only smaller. The roof to this home too is underground. In one of these houses several families of muskrats spend the winter.

In the spring this house is washed away by the floods, and Mr. Muskrat is too, if he doesn't get out in time. He then moves somewhere out along the bank of the stream and builds or rather digs his summer home.

He is of brownish color, shading from a black brown on his back to a chestnut brown on his sides. His tail is black, almost blue on the under side. This tail is a very interesting affair. It is flattened sideways into the shape of a paddle and fringed with stiff hairs. Mr. Muskrat uses it as a tool with which to swim. This tail takes up more than a third of Mr. Muskrat's length. He is usually about twenty-one inches long, so you see, his tail is something over seven inches in length. He needs it, too, for the greatest portion of his existence is passed in the water and for that reason he needs a good strong swimming instrument.



Mabel is having her vacation, and is wondering what to do to amuse herself. On the trees are represented four things which usually please vacationists. What are they?

LIVE STOCK MARKETS

(*Continued from page 9*)

good steers in Chicago last week was $14.50; this price was 35 cents lower than the week before and $1.75 lower than for the same week last year. Detroit got a liberal run of cattle on Monday of the current week and the outlook favors further price recessions locally in this department. The demand for yearling cattle of good quality is strong in all markets and current receipts are far short of the demand of this kind.

The demand for dressed beef showed a marked improvement last week over the week before which contained a string of Jewish holidays. On Friday of last week, carcasses of beef which carried good quality, were from $1 to $2.50 per cwt. higher in eastern cities than on the same day of the week before. Kosher beef took a big jump all around the market circle; these conditions had a marked effect upon the sale of cattle. Beginning a week ago last Monday and continuing up to the present, the spread between high grade killing cattle has steadily increased until it is a fact that some of the poorer grades of canning cattle will little more than pay freight and shipping expenses. In Chicago and western markets the dividing line in the steer division is at about $14.50 per cwt, Kansas City is about the only market that is getting grass cattle that yield satisfactory dressing percentages. The chief drawback, connected with the purchase of the grass cattle just at this time, is the uneven quality which they show; killers find it very hard to estimate the "yield" of these cattle so they play safe by buying them very low. For some weeks to come, prime killing cattle will gain in value and the kind that invoice only hide and bones will continue to work lower. Veal calves are fine under moderate receipts. Stock cattle are sharply lower.

The outlook for the sheep and lamb trade is decidedly bad at this writing and nothing but lower prices can be safely predicted. The largest run of the season, at the week end in Chicago and western markets, made a bad finish of a week that had shown a trend toward lower prices from the opening on Monday to the close on Saturday night. The average price for fat lambs in Chicago last week was $15.20. Both native and western range lambs showed a loss in Chicago, from the beginning to the end of last week, of 75 cents to $1.00 per cwt. Mature sheep made a better showing, prices gaining about 25 cents per cwt. from the close of the week before. The top in Detroit, on Monday of this week was $14 for lambs, a drop of $2 per cwt. in two weeks. The wool market is still in a comatose condition but there is a fair prospect of an early revival in demand. Feeding lambs are lower and slow sale at the decline.

The hog market of last week while it was rather disappointing to the men who had hogs to sell, was considered a decidedly healthy trade; all of the loss sustained in the recent bad break in values was regained but the market cleaned up well every day and the week ended with a decidedly active call for york weights and medium hogs but rather a slack demand for the heavy kinds. Chicago took a little off on Monday of this week and Detroit was higher for pigs and about 15 cents lower for finished hogs, than on Monday of last week. The speculative trade in provisions has had a hard road to travel of late, but better things are looked for in the near future. The writer expects to see higher prices for both live hogs and hog products before the close of next month.

DETROIT PRODUCE MARKET

Potatoes are a little lower and in ample supply. Cabbages are easy and there is a steady tone in other parts of the vegetable deal. Berries are in large supply and there is not much doing. Butter easy and abundant. Receipts are holding up well and consumers are not specially active as purchasers. With eggs the tone is firm and all receipts that are in good condition find competition among consumers. In the poultry deal there is an oversupply of small broilers and consumers are not taking that kind freely. The price is a little lower, but other lines hold steady and there are plenty of buyers for the best hens and broilers. Dressed calves and hogs are steady.

Blackberries—$9@10 per bu.

Huckleberries—$9@10 per bu.

Black Currants—$11@12 per bu.

Apples—New, Michigan, $2@2.50 per bu.

Gooseberries—$1@1.25 per 6 qt. basket.

Raspberries—Red, $11@12; black $9@10 per bu.

Cherries—$2.75@3 per 16 quart case for sour and $3@3.25 per 16-quart case for sweet.

Cabbage—4@5c per lb.

Popcorn—Shelled, 10c per lb.

Green Corn—50@60c per doz.

Celery—Michigan, 25@40c per dozen.

Dressed Hogs—Light, 18@20c; heavy, 16@17c per lb.

Dressed Calves—Best, 26@26c; ordinary, 20@23c per lb.

Tomatoes—Home grown, $6@6.50 per bu.; hothouse, $1.25 per 7-pound basket.

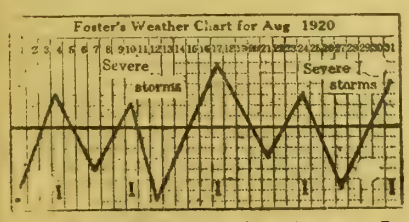
Cantaloupes—$5@6 per standard crate; $2.25@2.50 for flats and $4@5 for pony crates.

Live Poultry—Broilers, 48@52c; Leghorn broilers, 38@40c; hens, 36@37c; small hens, 34@35c; roosters, 20@22c; geese, 18@20c; ducks, 36@38c; turkeys, 40@44c per lb.

Hides—No. 1 cured calf, 28c; No. 1 green calf, 25c; No. 1 cured kip, 20c; No. 1 green kip, 18c; No. 1 cured hides, 16c; No. 1 green hides, 13c; No. 1 green bulls, 10c; No. 1 cured bulls, 13c; No. 1 horsehides, $7; No. 2 horsehides, $6. Tallow: No. 1, 8c; No. 2, 6c. Sheep pelts, 25c@2.50; No. 2 hides, 1c and No. 2 kip and calf 1 1-2c off.

THE WEATHER FOR THE WEEK

As Forecasted by W. T. Foster for The Michigan Business Farmer



WASHINGTON, D. C., August 7, 1920—Warm waves will reach Vancouver B. C. about Aug. 7, 14, 21, 28 and temperatures will rise on all the Pacific slope. They will cross crest of Rockies by close of 8, 15, 22, 29; plains section 9, 16, 23, 30; meridian 90, upper great lakes, Ohio-Tennessee and lower Mississippi valleys 10, 17, 24 31; lower great lakes and eastern sections 11, 18, 25, Sept. 1, reaching vicinity of Newfoundland about August 12, 19, 26, Sept. 2. Storm waves will follow about one day behind warm waves and cool waves one day behind storm waves.

I cannot determine the exact paths the storm waves will follow. They come a little behind the warm waves. Temperatures will average much lower in the northwest quarter or quadrant of the storms than at the storm center and much higher in the east quadrant. The northeast and southwest quadrants will average about same temperatures as the center of the storm. Big storms have a clear or partially cloudy center with dense clouds all around that center. Most precipitation falls on that side of the storm which is in the direction from its center toward that part of the ocean waters from which the moisture comes. Some moisture is now still coming from the Gulf of Mexico but most of it comes from Baffins Bay. Baffins Bay moisture will increase for several months and that from the Gulf of Mexico decrease.

The storm to cross continent from Aug. 7 to 13 will be one of the most severe of the summer and that from 21 to 29 a still greater storm. The month of August will not be good for northern harvests but for the continent cropweather will be better than the average. Some great destructions of crops will occur from tornadoes, hurricanes and heavy rains but these will cover comparatively small sections. My warnings of severe storms for the week centering on July 23 was certainly good. Watch August weather; it will be radical.

W. T. Foster

A nicely illustrated book on practical methods of producing, feeding and fattening sheep and lambs for market.

Sent postpaid on receipt of price, $1.00.

MICHIGAN BUSINESS FARMER
Mt. Clemens, Michigan

Farmers Service Bureau

(A Clearing Department for farmers' every day troubles. Prompt, careful attention given to all complaints or requests for information addressed to this department. We are here to serve you. Subscribers desiring a personal answer by mail to a question of a legal nature should enclose $1 for reply.)

DESTROY NOXIOUS WEEDS

The farm (vacant for three years) adjoining mine is one solid mass of milkweed. I have worked hard and killed out the pest on my farm. My land, the roadsides and other farms are being re-seeded every year, because of this and others given no attention. Is there any law or way to compel the Highway Commissioner to see that these are cut? He notifies me, with others every year to cut all foul stuff on my premises, but these vacant farms are let go and a menace to the entire country. There must be something done at once, as the seed balls are formed now.—Subscriber, Thompsonville Mich.

Sections 4603, 4604, 4605, 4606, and 4607 of the C. L. of 1915 provide that it shall be unlawful to allow such weeds to grow. If the owner does not cut them then the highway commissioner, overseer, or some one employed by them shall cut them and the cost shall be levied as a tax. To collect the tax strict compliance with the law laid down will be necessary. The law provides that the highway commissioner neglecting his duty may be fined.—*W. E. Brown, legal editor.*

SOWING ALFALFA

Will alfalfa sown this August make hay next summer? My land is sandy. Will it do well on sandy soil? I have heard it is hard on the land. Is it?—J. M. W. Gratiot County.

"As a general rule, plantings made in early August in lower Michigan secure a good start before winter, and furnish two cuttings of hay the following year. Should extraordinarily dry weather occur soon after planting, or in case of an early winter, the start made in summer and fall may be retarded and a light stand secured. During the present season, however, we have had a good supply of summer rain and alfalfa seedings made in early August should do well. Seed beds free of weeds can be prepared at this time.

Sandy land is well adapted to alfalfa if properly handled. The application of two tons of ground limestone or several cubic yards of marl should be made. It is important that light land be firmly packed with roller or cultipacker at the time of seeding. Several rollings just before seeding, or use of the cultipacker, both before and after seeding, is advised. A light top dressing of manure worked into the seed bed at the time of planting or applied in late fall, should aid in giving alfalfa a good start.

Culture for inoculation of alfalfa may be secured from the Department of Bacteriology of the Michigan Agricultural College, East Lansing, Mich. The price is 25c per bottle and one bottle contains sufficient material to inoculate a bushel of seed.

Land is greatly benefitted by growing alfalfa and crops of corn, potatoes and following crops of small grains after a stand of alfalfa, are usually considerably larger than when grown in ordinary rotation.

Circular No. 97 from the Michigan Agricultural College gives detailed information in regard to alfalfa growing.—*J. F. Cox, Professor Farm Crops, M. A. C.*

SAND VETCH

When is the right time to sow sand vetch and how much to the acre? Are the roots as good as clover sod for the ground? As for hay, can horses be fed on sand vetch in winter time? Where can the seed be bought?—E. L. M., Bailey.

Sand vetch for best results, should be planted during August or early September. Seedings made during the middle or latter part of August have a much better chance for a good start, before winter, than plantings made in the latter part of September. We would advise planting 20 pounds of vetch with one bushel of rye. The seed bed should be prepared as is usual for rye with particular attention given to packing firmly with roller or cultipacker before planting.

Applications of finely ground limestone and marl are usually necessary on lands needing lime.

Culture for the inoculation of vetch may be secured from the Department of Bacteriology of the Michigan Agricultural College, East Lansing, Mich. The price is 25c per bottle and one bottle contains sufficient material to inoculate a bushel of seed. Directions for application accompany the material.

The vetch and rye mixture makes an excellent hay and the vetch alone is comparable to alfalfa in feeding value. The mixture of rye and vetch can be fed safely to horses, but vetch alone should be fed with a mixture of other hay, as alfalfa is fed.

Sand vetch may be secured through the Farm Bureau Seed Department, Lansing, Mich., or from the S. M. Isbell Company of Jackson or the A. J. Brown Company of Grand Rapids.—*J. F. Cox, Professor of Farm Crops, M. A. C.*

EVICTED; NOT PAYING RENT

Is it possible to evict a tenant who is behind in paying his rent, even though he has a garden planted? I will look for an answer in the M. B. F.—J. M. A., Gould City, Mich.

Tenants who fail to pay rent according to contract may be evicted. Upon his eviction his rights in the garden are terminated. To protect his garden rights he must pay rent as agreed.—*W. E. Brown, legal editor.*

TRANSPLANTING PEONIES

Will you please inform we through the columns of your paper, when it is best to transplant peony roots.—A Subscriber, Caro, Mich.

We would advise that the plants be dug either in the fall or very early spring. Since the peony start to grow so early in the spring it is better to transplant in the fall after growth is completed.

The peony plants desire a moderately rich, well-drained soil. Fresh manure should not be used near the roots. If old plants are dug for transplanting the crowns can be divided, but it is usually two or three years after transplanting before such plants become thoroughly re-established and produce the best blossoms.

The plants should be set at the same depth as they were previously growing, deep planting or shallow planting both being common errors in setting any plants. The crown of the plant should be slightly below the soil after planting. Plants may be protected over winter with leaves or straw.—*C. P. Hallegan, Professor of Horticulture, M. A. C.*

PURCHASED BEANS AT OWN RISK

In the first part of May we sold some beans to say John DeGroote. He was at one place and looked at the beans that is he looked at 2 bags. We told him to look at all the bags but he, at that time said that he did not have time to look at all the bags. He asked my brother how the other bags were. He told him that he did not know as they were threshed at the time he was in the army, but he was buying the beans just as they were then. He and my brother went to my other brother who was in the field working. This brother asked him if he had seen all the beans. He said "yes I do not buy a cat in the bag," then they started talking about the price. Then my brothers told him that if we couldn't get over $4 a hundred they would feed them to the hogs but they would not sell them for less than $3 a bushel, but finally they agreed on $2.75 a bushel. He payed $50. Then we were to send the beans which we had but when received he said that the beans were mouldy and that he wanted a rebate on the same which we refused to do on the grounds that he had seen the beans and bought them as they were. Can he now force us to return him the price that he payed for the beans. He has returned the beans, that is, he has thrown them on the road after we refused to accept the beans.—G. R. H., Zeeland, Mich.

You are not liable upon your statement of facts. He bought the beans at his own risk.—*W. A. Brown, legal editor.*

CANADA THISTLE BLADES

I would like to get some advice from some one with regard to Canada thistle blades. I would like to get some kind of a tool that would cut 2 or 3 inches under the ground and about 6 feet wide. The objection I have to the attachments I have seen for a two horse cultivator is that they do not cut wide enough to make their use practical in large fields infested with Canada thistles, quack grass, etc.—A Subscriber, Marion, Mich.

I know of no attachment now manufactured which will meet the needs as you describe them. I called at the John Deere Plow Co. branch at Lansing recently and Mr. Hurd informed me that to his knowledge there is no such implement except as it is found on the two-horse cultivator. He suggested that going over the land with a double disc harrow would be an efficient means of destroying the thistles.—*E. C. Sauve, Ass't Professor, Dept. of Farm Mechanics, M. A. C.*

GOVERNMENT LOAN

Please give me the facts of the government loan. I am just starting in on a new farm in the woods. Is there an office or bank in this part of the state? —Subscriber, Cheboygan County.

I have understood that the Land Banks have not been making recent loans on account of the financial condition of the country and also because of legal contests involving the banks themselves. I think there is no bank nearer to you that the Federal Land Bank of St. Paul, Minn. You could obtain particulars by writing to them. It is their method to have an abstract of title, to be able to show a clear title in the applicant to have their own appraisers appraise the land and to loan only one half of the appraised valuation.—*W. E. Brown, legal editor.*

RE-REGISTRATION

Understand that in order to vote on the parochial school amendment every voter has to re-register before Aug. 14, 1920. Please let us know if that is correct.—N. R. D., Reed City, Mich.

A re-registration is required in townships and cities having a population of ten thousand or more, while in cities and townships of less than ten thousand a re-registration will be had in any township or city where the council or other legislative body declares, by resolution, that it is desirable to have a re-registration in such city or township.—*Coleman C. Vaughan, Secretary of State.*

PAYMENT OF LEGACY

In January my father passed away and by the terms of his will I was to have all money on hand at time of his decease, the property both real and personal was to be divided between my two sisters and a deceased sister's child. There is a 70 acre fruit farm valued at $100 per acre and tools and stock. They are trying to sell but as yet have found no buyer. Now what I want to ask you is this. Does the money which was left to me (it amounts to $410) have to lay here in this bank until the estate is settled? The administrator is the banker here, and of course he wants the use of that money as long as possible at 3 per cent while we have to pay 7 per cent on a mortgage on our farm at a neighboring bank.—X. Y. Z., Frankfort, Mich.

If the debts and expenses of administration have been paid the judge of probate may take an order for the payment of your legacy. The administrator may otherwise withhold distribution until final settlement of the estate.—*W. E. Brown, legal editor.*

WHEAT ON BARLEY GROUND

I have a piece of barley ground sown on corn stubble. I disced the ground in fitting for the barley. I think the land was sod turned under for the corn. The soil is clay loam, well drained. Would I be safe in plowing after harvest and top dressing with stable manure? What would you advise me to sow with timothy, alsike or June clover or both?—W. F. C., Montcalm County.

While you do not state that you desire to sow wheat this fall, under the conditions you mention this is probably advisable and we would recommend plowing as soon after harvest as possible, then top dressing the seed bed with stable manure and working this into the soil. When the wheat is sown from 3 to 4 pounds of timothy seed may be seeded, followed by a spring seeding of 2 pounds of alsike and 4 pounds of June clover.—*C. R. McGee. Assistant Professor of Farm Crops, M. A. C.*

THE COLLECTION BOX

FIRM SETTLES AFTER NEARLY A YEAR

"I sent for a hat, waist and coat. I received the hat and waist. The whole order amounted to $28.25. The part they sent amounted to $7.96 and I have never received the coat I have written twice to them and have had no reply. The coat and parcel post amounted to $20.29. I put it in the Justic of the Peace's hand. He wrote to them and had no reply. Then he made draft on our home bank and they would not send it in. The firm sent me a card that if the rest of my goods did not come in a few days to send it back and I did so and I had no reply. My order was sent Sept. 27, 1919. I got the card about the middle of November, before I put it in the Justice of the Peace hands. The order was sent to Bellas, Hess & Co., New York, N. Y. —*Miss M. M., Twining, Mich., June 30th.*

On July 15th the Bellas Hess Co. acknowledged receipt of the complaint and enclosed copy of letter written to our subscriber as follows:

"We are in receipt of a communcation from THE MICHIGAN BUSINESS FARMER, relative to an order placed with us for which you have failed to reecive a satisfactory adjustment. Enclosed herewith is our check for $20.29 the amount due you. We realize that you have sufficient cause for complaint, but we want to assure you that we are glad you have given us an opportunity to adjust matters satisfactorily."—*Bellas, Hess & Co.*

LAWYER FAILS TO COLLECT; M. B. F. SUCCEEDS

"The 31st day of March last I sent to the Home Tire & Rubber Corp., of Grand Rapids for two 30 x 3 tires they sent me a circular advertising them for $10.45 each. I sent them a check for $20.90. In about 8 days I received one tire. I wrote to them twice and could not get any reply so I had a lawyer in town write and he doesn't get any reply either, so I guess they are a fake. If so I would like your readers to know."—*C. F. W., Fowlerville, Mich.*

This complaint was promptly taken up with the firm in question. No reply was received from them, but under date of July 9th, two weeks later, our subscriber wrote us as follows:

"Three cheers for your paper. I received a check in full from that Grand Rapids Tires Co., you wrote to. You certainly brought them to time in a hurry. I would be willing to pay you but I see in your paper you make no charge so many thanks to you and here is a check for $2 to extend my subscription. I think the legal advice is worth many times the price of your paper."—*C. F. W., Fowlerville, Mich.*

COMMISSION COLLECTED

"Several months ago I sold a cream separator, for H. B. Babson to my neighbor. I received a letter from Babson acknowledging same but no $7.50, the commission I was supposed to receive. I wrote him a letter some time ago and received no reply. Will you kindly help me collect my commission."—*G. M., Wheeler, Mich., July 8th.*

On July 15th, the Babson Company sent us a copy of a letter they had written to our subscriber, as follows:

"I just received a letter from THE MICHIGAN BUSINESS FARMER.

"I depend a great deal on my old customers in recommending the Melotte Separator and making sales for me. It is of course, my desire and intention to send every commission promptly as it falls due. In your own position you undoubtedly realize at present the help situation. Through oversight on the part of one of our bookkeepers, I failed to send you the commission due on the sale to Mr. Will Prichard promptly when due. This, however, was forwarded before Mr. Schalck's letter was received. I appreciate the interest you have shown in the Melotte, and will assure you that I will be more prompt in paying commissions in the future."

UNCLE SAM'S HIRED MEN WHO SERVE FARMERS

(*Continued from page 4*)

Office of Experiment Stations

This office is broadly organized to exercise the supervision provided by law over the funds and operations of the State agricultural experiment stations under Federal appropriations and to afford such advice and assistance as will best promote their efficiency.

This office also collects and disseminates, through the Experiment Station Record and otherwise, information regarding similar institutions and work throughout the world. To this office is assigned the general direction of the work of the insular experiment stations in Alaska, Hawaii, Porto Rico, Guam, and the Virgin Islands, which carry on investigations and experiments with reference to native and introduced crops, plant and insect pests, and improvement of live stock, with a view to the diversification and general improvement of the agriculture of these outlying possessions of the United States.

Offices of Extension Work

The two offices of extension work, one for the South and the other for the North and West, undertake, in co-operation with the State agricultural colleges and local organizations to carry directly to the farm and the farm home the information regarding agriculture and home economics collected by the department and the State agricultural colleges and experiment stations.

At the present time the department co-operates with the state agricultural colleges in employing 3,800 extension agents, of whom 2,340 are engaged in county-agent work, 1,040 in home demonstration work, and 410 in club work. Approximately 2,000 counties have men agents and 800 have women agents. Altogether there are over 2,800 counties that have sufficient agriculture to demand the employment of an agent, but only about two-thirds of these counties have men agents and not quite one-third have women agents. The ideal to be attained is to have a man and a woman agent in every agricultural county.

Appropriations

During the present year there is available $14,250,000 to carry on this work. Of this amount $5,700,000 is provided by the Federal government under the provisions of the Smith-Lever Act and the direct appropriation to the department for farmers' co-operative demonstration work and for demonstration work to be carried on by the investigating bureaus of the department. Of the $8,470,000 available from within the states, $4,640,000 was contributed through sources within the respective counties, the remainder being contributed by direct appropriation of the State legislature or from funds under the control of the state colleges. Of this fund, $7,872,000 is being used to pay the salaries and expenses of agents employed in county agent work, $3,560,000 for home-demonstration work, and over $1,000,000 for the employment of county club agents and leaders. At present it is difficult to maintain a sufficient force of suitably equipped extension agents, on account of high prices and the competition of outside agencies for the type of men and women that make successful extension agents.

Office of Home Economics

The Office of Home Economics investigates, both from the scientific and from the practical standpoint, the nature and uses of agricultural products utilized in the home for food, clothing, and equipment, and the methods of household work and management.

The publications of the Office of Home Economics make avaliable to housekeepers, teachers, students, and extension workers the results of such studies. This office conducts investigations with the respiration calorimeter, an instrument that measures energy in terms of heat and the exchange of gases due to respiration. The investigations include studies of the efficiency of foods, clothing and household equipment and various methods of work. This office is the only one in the government service that devotes its time exclusively to investigating subjects of material interest to the home and to farm women.

Publication Work

The publication work of the States Relations Service is handled through its Editorial Division, which also has charge of lantern slides and other illustrative material for service use, and the duplicating and publicity work of the service.

In all matters of printing and distributing publications and dissemination of publicity matter the service works through or in co-operation with the Division of Publications of the Department. The States Relations Service makes an annual report to Congress on the work and expenditures of the agricultural experiment stations under the Hatch and Adams acts, and on co-operative extension work in agriculture and home economics under the Smith-Lever act.

It publishes the Experiment Station Record, a technical review of the world's scientific literature pertaining to agriculture, the distribution of which is restricted to persons connected with the agricultural colleges, experiment stations, and similar institutions, and to libraries and exchanges. The Record is issued in two volumes of ten numbers each annually.

It publishes the results of the work of the experiment stations in Alaska, Hawaii, Porto Rico and Guam in reports and bulletins.

It publishes the results of the Office of Home Economics on food, clothing, shelter and household management, in the form of technical bulletins and through the Farmers' Bulletins of the department.

It issues professional bulletins and leaflets based on the work of the Division of Agricultural Instruction in Schools.

It also prepares reports on studies of problems in agricultural education in co-operation with the Federal Board for Vocational Education and the Association of Land Grant Colleges which are published by the Board or the Association.

The co-operative extension work is aided by distribution of circulars, lantern slides and other illustrative material, prepared by the service in co-operation with the other bureaus of the department and the state extension services.

The service makes contributions to the Farmers' Bulletin series of the department, especially on subjects in home economics; it prepares articles for outside publication in technical journals, and supplies a considerable amount of material relating to the more popular features of its work for the use of the Office of Information of the Division of Publications of the department.

REPORT SHOWS PRODUCTION OF LIVESTOCK DECLINES

The Institute of American Meat Packers' recently issued the following statement: Meat production in the United States during the half-year just closed, as compared with the first half of 1919, shows a decrease of about five per cent, which amounts to several hundred million pounds, according to official figures of slaughter at the sixty-nine principal stockyards.

At these sixty-nine markets combined, slaughter of cattle, hogs and sheep for the first six months of the year shows a falling off of more than two and a half million animals as compared with the first six months of 1919. This indicates a probable decrease at the sixty-nine markets of more than 400,000,000 pounds in meat production for the first six months of 1920 as compared with the same period in 1919. If this rate of increase should continue the same for the rest of this year, meat production in the United States in 1920 at these markets probably would be nearly a billion pounds less than in 1919. Such a decrease would be just under five per cent of the 1919 production. So far as domestic supplies are concerned, it is possible that this decrease would be counteracted to some extent by the decrease in exports.

During nearly every month of 1920, producers lost money on cattle and many packers reported losses on beef. Prices of hogs and pork products are substantially lower now than at this time last year, due largely to diminished exports. The decrease in slaughter indicates that, as a result of these losses, some producers have cut down their herds and may restrict production. Such a situation would be an economic misfortune for both the livestock producer and for the public. Past experience has been normally that higher prices for meat animals, and hence for meat, have followed restricted production, after which the consumer again restricted consumption. The ratio of livestock to population for the last twenty years, with the exception of one or two of the war years, has been constantly decreasing.

In some quarters world crop conditions and the price trend in corn and hay are interpreted favorably to producers of livestock. Those holding this view point out that lower prices for grain obviously would reduce the cost of raising livestock.

Fluctuations in receipts during May and June brought the price of beef cattle in May down near the level prevailing when the United States entered the war, and then, in June, sent it up again so that the average price at Chicago for native beef steers—$14.95—was, with the exception of June, 1918, the highest June average on record. At seven leading markets the receipts for the first two weeks of June were less by more than 100,000 than the receipts during the first two weeks of May.

INDIANS USE PUREBREDS

More than 191,000 head of livestock owned by Navajo Indians in New Mexico henceforth will be bred only to purebred sires. The female stock includes 5,000 cattle, 8,000 horses, 150,000 sheep, and 30,000 goats, besides smaller numbers of swine and poultry.

OUR SERVICE
is the kind you would want if you could know batteries inside and out as we do . .

"WE will make your battery last longer—no matter what its brand. Say you bring us your battery. You're sure it's 'dead.' You are willing to buy a new one. But no, there is no sale. For we open your battery up, show you where a slight repair will make it as frisky as a spring lamb, and give you a guarantee of 8 months more battery life."

USL STORAGE BATTERY SERVICE

"We've saved you money and made an honest profit. And when you really need a new battery we'll be glad to sell you the USL—the one with Machine-Pasted Plates."

"The reason we USL men prosper is that, once people try our honestly built battery or our Golden Rule Service, they know we're the right people to trade with."

U. S. Light & Heat Corporation, Niagara Falls, N. Y.

Likely there's one of our fifteen hundred service stations in your town. If there isn't, for the address of the handiest, just drop a post card to the nearest of the following distributors:

United Electric Service Co., Detroit, Mich.
U. S. Light & Heat Corp'n, Chicago, Ill.

Sudan Grass Grows Well in U. S.

TEN years after its introduction to the U. S. from Khartum, Africa, Sudan grass was being successfully grown in nearly all parts of the United States. It does not serve well either as a "money crop" or a soil improver, hence it may never find a permanent place in regular crop rotations. It has, nevertheless, a very important place in the farmer's second line of defense as a catch crop which can be planted to give satisfactory returns when conditions have brought failure to other hay crops. This is the verdict pronounced by the United States Department of Agriculture in Farmer's Bulletin 1126 recently issued.

Sudan grass is replacing millet as the premier catch crop in many localities because of its ability to produce a fair yield and a high quality of hay under conditions of low rainfall; its rather short growing season; and its ability to thrive on a wide range of soil types. Large yields of Sudan grass are obtained only on good soils, but the grass fails completely only on cold, poorly drained land.

Sudan grass produces heavily. In California under irrigation it has made yields of 9.8 tons of field cured hay an acre, when alfalfa produced but 8.3 tons under like conditions; it ordinarily yields about the same as alfalfa under irrigation in the Southwest, but Sudan grass gives its full crop in three cuttings against the four or five required for alfalfa. It is the only grass yet found which in this part of the United States ranks as equal of alfalfa in point of yield and quality of the hay. Its record in this respect has led to its use in "patching" old alfalfa fields when the stand of alfalfa has been destroyed. In the Southern Great Plains where there is a low rainfall, Sudan grass grown without irrigation will yield from one to three tons of hay to the acre.

There are certain parts of the United States where the Department of Agriculture considers it unwise to depend on Sudan grass for hay. This is true of the strip of territory 200 miles along the northern boundary; the regions of high altitudes in the Western States; and also most of Florida and a narrow strip of land along the Gulf Coast. Low temperatures prevent success with the grass in the first two regions named, and disease is the limiting factor along the Gulf Coast. In a majority of the Central and Southern States, however, climatic and soil conditions are favorable to Sudan grass.

Although Sudan grass is best adapted by nature to use as a hay crop, it is also used with great success as a soiling and pasture crop for summer pastures. Its use as a silage material is limited by the fact that it is easily made into hay and fed as such with very little waste, and also because corn and sorghum both outyield it and are generally available throughout the region where Sudan grass is grown.

In the smi-arid districts the highest yields are obtained when the grass is sown in rows so as to allow of cultivation. The advantage in yield of the row over the drilled seedings is so small, however, that most farmers prefer to avoid the necessity of cultivation by drilling or broadcasting the seed. A common grain drill handles well-cleansed Sudan grass seed without trouble and the hay from drilled seedings is finer stemmed and matures more evenly than row plantings.

The feeding value of Sudan grass is equal to timothy hay. In localities where soy beans or cowpeas do well these legumes may be grown in mixtures with the Sudan grass. Such a mixture produces a hay of higher feeding value than the grass alone, because of the high protein content of the legumes.

Sudan grass hybridizes freely with the sorghums. It is necessary therefore, if pure seed is produced, to have the Sudan grass field at some distance from any sorghum, otherwise, it will result in a mongrel crop the following year.

The Department of Agriculture's new bulletin goes very thoroughly into the details of cropping, planting, harvesting—both for hay and for seed—as well as the best methods of feeding the hay to live stock.

Horse Dealers are Behind on Orders

INCREASED production of good horses is the great need at present. Fiss, Doerr & Carroll Horse Company, New York, one of the largest firms dealing in horses in the East, state that they sold more draft horses for city use in the first six months of 1920 than in any other similar period for many years, and could have disposed of many more had the supply been available. A. M. Ernst, general manager of the company, when interviewed on Friday, July 16th, said of the situation in the east:

"We have enjoyed an usually good trade this year. City users of transportation are swinging back to big draft horses as the cheapest, most reliable and most efficient motive power for all heavy transportation within the working radius of a horse, despite the increase in the cost of feed, which has been formidable during the last year.

"City users are also coming to realize that for all hauls, no matter what distance, where frequent stops are involved, as in delivering groceries, ice, milk or other supplies furnished to customers on regular routes, hourses are the only practical economical hauling power. The trade is gaining. Our great problem today is to supply that trade. Good horses are becoming increasingly scarce and prices have been higher this season than we have ever known. Heavy draft teams have been bringing from eight to twelve hundred dollars per pair, but if they go much higher, the balance of favor will be liable to swing over to motor trucks. There is a good profit to farmers in raising draft geldings to bring $325 to $400 on the farm, yet we cannot get enough of that.

"The market is here and will continue as long as the supply is anywhere near adequate. I know that about ten central west states.—Ohio, Indiana, Illinois, Wisconsin, Missouri, Kansas, Iowa, North and South Dakota and Nebraska,—produce ninety per cent of all the good draft horses that eventually find their way into city use, but our buyers in the Mississippi Valley report that farmers haven't bred their mares during the last four years and but few are in a position to sell any heavy draft animals.

"In the past, good farms had young stock coming on, and could and did sell their mature mares and geldings hardened and suitable for city use. Today, on account of the fact that no young horses are coming on to take the place of these older ones, they cannot spare the horses seven and eight years old. It is a great handicap to our trade.

Advises Buying Range Horses

"The practical thing to do to meet the immediate situation, is to follow the suggestion of Wayne Dinsmore, Secretary of the Horse Association of America, who advises all central west farmers to buy good grade western horses three or four years old this fall and sell the older farm stock. These western horses, raised in Colorado, Wyoming, Montana and western states, carry three or four crosses of draft blood, and mature in the range states between fourteen and fifteen hundred pounds. However, if shipped to corn belt farms and worked there during their fourth and fifth years, with liberal feed, they mature at sixteen to seventeen hundred pounds. The corn belt farms will benefit doubly because they will be able to sell their old horses before any material depreciation sets in, and they will also gain in the increase in value of the young western horses purchased as 3 or 4 year olds and grown out to increased size and usefulness."

STORING BARNYARD MANURE

The principal source of loss in plant food from manure are through leaching, fermentation and scattering, and if manure is to be stored, all practical precautions should be taken to keep down loss from any of these agencies. An important point to consider in storing manure is the cost of handling. Handling manure increases the expense and at the same time lowers the value of the manure since the forking over of compacted manure exposes it to the air and gives the material a better chance to ferment and decay. For these reasons it is best to leave manure undisturbed where produced, so far as possible, until it can be hauled to the field, says F. L. Duley of the University of Missouri College of Agriculture.

Where animals are confined in stalls or covered feeding yards the manure may be allowed to accumulate for several months and be hauled out only once or twice a year, with a comparatively small loss of plant food. If plenty of bedding is used it will absorb the liquid manure and the trampling of the animals will keep this compact and moist so as to prevent much of the aerobic fermentation and consequent loss of nitrogen. If manure is left in the stall or feed yard where it will be kept moist and thoroughly tramped, so as to exclude the air, there is no better method of storing. Since there is no leaching under these conditions there will be practically no loss of phosphorus or potash. The covered feed yard is extensively used in some parts of the country.

This method of handling manure is advisable mainly where well-bedded stalls are provided for horses, and in cattle sheds or mule barns where the animals run loose and the trampling is very thorough.

DAIRY CATTLE CONGRESS AND INTERNATIONAL BELGIAN HORSE SHOW

Premium lists for both the Dairy Cattle Congress and International Belgian Horse Show to be held at Waterloo, Iowa, September 27-October 3, are off the press and are being sent out to breeders in all states of the Union and Canada.

The 1920 Belgian Horse show is the second annual event of its kind. The premium list this year is substantially larger than that offered at the first show held last year. Because of the success of the first show the American Association of Importers and Breeders of Belgian Draft Horses has voted to increase the offer $1,500 in cash premiums. The total cash premiums offered this year is $6,500.

The premium list has been prepared by a committee after special study of conditions and is intended "to develop the Belgian horse industry in the best possible way; to encourage the small breeder to show; to make the show of the greatest educational value to the breeders and the general public.

The show committee for the International Belgian Horse Show is composed of the following successful breeders: Dr. T. U. McManus, Waterloo; Chas. Irvine, Ankeny, Iowa; and J. W. Van Nice, Garrison, Iowa. Judges for Belgians will be Prof. Donald J. Kays, Columbus, Ohio; Charles Brown, Marcus, Iowa; and George Rupp, Lampman, Sask., Canada.

Especially attractive are the premiums offered by the Dairy Cattle Congress management and various breed associations for classes and individual animals of the five dairy breeds—Guernsey, Holstein, Jersey, Ayrshire and Brown Swiss. The total premium lists are substantially larger than last year due to the addition of some special premiums and increases made by the breed associations. One department is devoted to state association Holstein herds such as was shown by Minnesota at the 1919 show.

With increased premium lists for both shows the management anticipates a greater showing of both dairy cattle and Belgian horses than last year and indications point to the greatest success in the history of the Dairy Cattle Congress which has become nationally recognized as an important factor in the dairy industrial world.

Veterinary Department

SWELLING ON WITHERS

I have a 5 year old gray mare that weighs about 1,100 pounds that while out in pasture hurt herself. The next morning she appeared stiff and we were unable to locate lameness. Finally a swelling came on top of the withers. It was about the size of a walnut and soft. We operated on it and found it full of puss. What would you advise? —R. M. C., Midland County.

Your horse has Fistula of the Withers, caused in my opinion by a bruise while rolling in the pasture. Until recent years this has always been one of the most dreaded diseases affecting the horse; now, if taken in the early stage, the vaccine treatment, together with proper drainage is very satisfactory in majority of cases. This consisted of the subcutaneous injection of mixed infection vaccine every three to five days.

In the chronic form surgical treatment is the most reliable resort and if properly done usually brings desirable results. These are cases in which a graduate veterinarian should be employed.—*W. A. Ewalt, veterinary editor.*

LUMP ON HORSE'S HEAD

I have a horse that has a lump on top of its head, just back of the ear. It is about half as large as a hen's egg. It has been there about two months. What will take it away? I thought it might be a poll evil coming on. The lump is quite hard.—R. G., Newaygo County.

This has no doubt resulted from a bruise and will in all probability terminate in either an abscess or a Poll Evil. Shave the entire enlargement, and after washing thoroughly with a good antiseptic solution, apply a blister consisting of one part red iod. mercury to ten parts of lard. This will soften the enlargement in from three to five days when it should be lanced and probed by a competent veterinarian to find out and remove the cause.—*W. A. Ewalt, veterinary editor.*

CURING COLLAR BOILS

Having seen the request of W. H. S., Newaygo county in M. B. F. regarding the removing of collar boils by surgical operation I wish to say that no operation is necessary and he can work his horse every day if he will apply the following mixture: One-half pint of fish oil, 1 gill of turpentine and 2 tablespoonsful of powdered blue vitriol. Shake and apply twice a day. Keep the collar clean.—*A Subscriber.*

COW GIVES LESS MILK

We had a cow that blew up two weeks after she had a calf but is better now. Last year she gave 14 quarts of milk and now she gives only 2 quarts. Let me know what to do as soon as you can."—P., Bitely, Mich.

Your cow has indigestion. Give her a good cathartic consisting of epsom salts lbs. two; powdered gention and ginger equal parts one oz. capsicum one dram; dissolve in two quarts of hot water, let cool and give slowly at one dose. After this works off give the following tonic. Powdered Nux Vomica, oz. two; powdered gention, ounces five and add Sodium Bicarg to make one lb. Give one tablespoonful three times a day.—*W. A. Ewalt, veterinary editor.*

CURING WARTS ON COW'S TEATS

If F. J. S. of Berrien County will apply good castor oil to warts on his cow's teats, the warts will soon disappear. Apply once a week or more, after milking. Castor oil is very good for cow's teats that are nursing calves. The writer had a heifer that was troubled with warts around her eyes and jaw and a few applications entirely removed them with no bad results.—*D. H. M., Shiawassee Co.*

VALUE OF EXHIBITS AT WEST MICH. FAIR WILL EXCEED $3,000,000

The total value of the exhibits at the West Michigan State Fair, September 20-24 will exceed $3,000,000 making the Grand Rapids exposition one of the largest in the central states. The automobiles, tractors, farm machinery, implements, electrical devices shown will exceed $2,00,000 while the agricultural, horticultural and forestry displays together with the thoroughbred livestock will be worth well over $1,000,000. The displays in all departments will be greater than ever before. Many new educational features have been added this year including boys and girls livestock judging contests, egg laying contests, tractor contests

Prize cattle, blue ribbon winning horses, sheep and other stock and whopping big pumpkins draw plenty of interest at the Michigan State Fair but not any of these attracted more attention than this young man and young lady for they were among the blue ribbon winners of the baby show. The picture above introduces John Lawrence Connolly and Virginia Kennedy John takes the winning of first prize in his class of young men as something serious. He was declared by the doctor judges to be a 99 per cent perfect baby. Virginia is a 99 per cent perfect young lady also.

The baby show always is one of the big features of the fair and, according to G. W. Dickinson, Secretary-Manager, entries made thus far this year are such that this year's show will prove no exception. The fair opens Sept. 3 and closes Sept. 12. During that time hundreds of babies will be presented by doting parents to the physician judges.

Besides the possibility of having their babies declared to be the very best in Michigan, mothers have the opportunity of obtaining a complete physical examination of their children by entering them in the baby show. Physicians who will do the judging this year will present each mother with a chart showing in the most minute detail the exact physical condition of her offspring.

HON. L. WHITNEY WATKINS
Manchester, Mich.

ONE OF Michigan's best-known farmers and live stock men and prominent in public affairs. Born and trained in agriculture on the huge farm he now owns and operates at Manchester and upon which his father lived for 85 years.

L. Whitney Watkins started his education in the district school. Graduated from Michigan Agricultural College in 1893 and went straight back to the farm. Appointed to the State Board of Agriculture in 1899. Chosen by Governor Warner as Michigan's representative Farmers' National Congress, 1906. Served two terms as senator from the tenth Michigan district. Was twice president State Association of Farmers' Clubs and twice president Michigan Live Stock Breeders and Feeders Assocation.

Was Progressive candidate for Governor upon the Theodore Roosevelt-Hiram Johnson ticket in 1912.

Was selected by the U. S. Department of Animal Industry and the Michigan Live Stock Sanitary Commission to appraise the live stock condemned and slaughtered during the Foot and Mouth epidemic in Michigan during 1914.

Was elected in 1918 to his second term upon the State Board of Agriculture and upon which he now serves.

Mr. Watkins is a very enthusiastic member of the Michigan State Farm Bureau and one of its staunchest advocates. He is a member of the board of control of the Michigan Co-Operative Elevator Exchange, a department of the Farm Bureau, is a Director of the Manchester Co-Operative Live Stock Shippers Association and was the first president of the Jackson County Farm Bureau. He has served upon the executive boards of both the West Michigan State Fair at Grand Rapids and the Michigan State State Fair at Detroit. He is now president of the Michigan Crop Improvment Ass'n.

POST OFFICE
MANCHESTER, MICH. May 29, 1920.

Detroit Packing Company,
Detroit, Michigan.

Gentlemen:-

Replying to yours of the 27th inst,. I hereby hand you my subscription for a block of stock and agree to accept a position on your Board of Directors, acting in the capacity of Special Live Stock Advisor, and hereinafter state my views for so doing.

First, I know as every live stock producer knows that at present we have entirely inadequate and unsatisfactory marketing facilities in Michigan. Our Cattle, hogs and sheep are forced to market outside our state at greatly increased freight and shrinkage cost, which are paid for by the live stock producer and the consumer of meats.

Second, I believe Detroit an especially well adapted center for the development of a large packing enterprise which will foster and encourage Michigan agriculture along the lines of live stock husbandry.

Third. I believe the Detroit Packing Company if properly conducted will be a financial success and conducive to the best interest of our people.

Fourth. The Detroit Packing Company, which is in no sense a cooperative institution will give preferential and special attention to the farmers' business, because its officers realize that the farmers are now for the first time interested in carrying their business of marketing to the direct sale of finished products to the consumer, and invite and encourage their participation in the affairs of the Detroit Packing Company, through the purchase of stock and the direct marketing of their live stock in their own state and through their own business concern.

Trusting that this will state my position clearly in the matter, I am

Very truly yours,

L. Whitney Watkins

Model Farm and Modern Farming at State Fair

Henry Ford to Build Farm Buildings and Carry on Farming Operations During Michigan Exposition

OUT WOODWARD avenue, Detroit, just north of the Michigan State Fair ground is a vacant field. In one part of the field corn is growing. The rest is barren of crops. There are no buildings,—no house, no barn, none of the customary outbuildings you associate with a farm. There is no sign of life. A few months ago you might have seen the owner of the field going through the corn with a cultivator. Except for the steady stream of automobile traffic which flows by north and south by the field it is as isolated as though it were set down in the dense woods of northern Michigan.

But if you should chance by that field, three weeks hence when the State Fair is in progress you would see a wonderful transformation. As if transplanted there by the hand of Alladin you will see a substantial modern farm house, set an appropriate distance from the highway. Conveniently to the rear you will observe a barn, well set up and attractive in appearance. Scattered here and there you will also note other buildings such as a garage for tractor and automobile, milk house, flour mill, electric light plant, saw mill, etc. Should you make your visit during the noon hour you will probably observe little signs of life about these modern surroundings, as the farm hands will undoubtedly be gathered about the dining room table which is the proper place for hungry farm hands to gather between the hours of twelve and one. You may observe standing in various positions a large number of tractors, some belted, some hitched to wagons, and others unattached as tho waiting for the hand of man to give them a job to do. If your curiosity has been excited and you hang around a spell until the hour of one has struck you will be able to see Henry Ford's model farm in action.

Feature of State Fair

It was upon the suggestion of Mr. Geo. Dickinson, manager of the Fair, that Mr. Ford decided to add this novel feature to the round of events at the Fair. The actual purpose of the model farm and the modern farming operations that will be carried on during the week of the fair is to show the large number of uses to which a tractor can be put. Mr. Ford calls the tractor a "mobile power unit;" in other words a unit which can be moved from place to place about the farm and made to do almost any kind of mechanical work performed by man or horse. Twenty to thirty tractors will be employed simultaneously for this work.

The numerous activities which will be carried on upon this model farm during the fair will include the routine work of both farm and household so there will be something to interest the ladies as well as the men. Shocks of wheat will be placed in the field as if just stacked from the binder. These will be threshed and sacked and transported by a tractor to a tractor-driven flour mill a few rods away where it will be ground into flour. This flour will be turned over to a model bakery near by where it will be made into bread, the mechanical mixing machines also receiving their power from a tractor. In order to find out whether "tractor-made" bread is as good as any other kind, it has been decided to install a power churn which will turn out tractor-churned butter to spread upon the bread. While the ladies are satisfying their curiosity and their appetite from this tractor combination the men will turn their attention elsewhere for a few moments.

Farmer Ford suddenly discovers that his corn needs cultivating. So he sends Tractor Ed. to the corn-field with a tractor, and there if you desire you may witness the seemingly impossible task of cultivating corn with a tractor. After the corn has been cultivated and a few hours elapses to permit it to complete its growth and ripen it will be cut by a corn binder pulled by a tractor and hauled to the barn. Some of it will not be fit for husking so it will have to go into the silo, and, of course, the silage cutter will receive its power from a tractor. Ripe corn will be taken to the grinding mill where a tractor will convert it into meal.

During these manifold operations something may happen to halt operations for a little while. It usually does on every well-regulated farm. Possibly one of the hired men may get mad because he has been put on tractor No. 2 instead of No. 13 and kick a hole through the pig pen. Or perchance a stray cyclone may stop long enough to rip a few boards off the barn. But, pshaw, why worry over such trifles as these. The model farm is prepared for all such emergencies and all hands are called off the job of threshing, milling, siloing, cultivating, churning and eating bread and butter, etc., to help manipulate the portable sawmill where in less time that it takes to tell it the tractor-driven machinery turns out the necessary lumber for repairing the damage caused by the indignant hired man and the refractory elements.

In the meantime the ladies will no doubt have explored the model house. They will have exclaimed with squals of delight over the running water, the electric washing machine, the electric iron, the electric fan, the electric waffle iron, and a dozen or so other electrical appliances intended to make the farm house work easier and more efficient. And if you stay long enough you may see the model house brilliantly lighted from cellar to garrent with that greatest of all boons to the country dweller, the electric light. Upon investigation you will find that the electricity for all of these lighting, heating and power purposes was generated by a dynamo belted to a tractor.

These are a few of the scorces of the demonstrations that will be conducted showing the practical ways in which the tractor can be used upon the farm. The tractor is only in its infancy and farmers have much to learn about its usefulness. It will be worth the while of every rural visitor to the State Fair to visit this exhibition and see how Henry Ford does his farming.

Three Motor Tractors Replace 120-Horse Equipment

Scene on a Western farm showing the trucks used to transport the apples from a 4,000-acre orchard. This scene may be duplicated in many of the large frut farms of Michigan.

CURRENT AGRICULTURAL NEWS OF THE WORLD

LIVE STOCK SHIPPERS TO GET REFUND

Through a recent decision of the Interstate Commerce Commission in session at Washington, every shipper of live stock to the Chicago market for more than three years past is entitled to a refund of 25 cents per car on every car shipped. The decision knocked out the charge of 25 cents for loading and unloading which the shippers were forced to pay when the railroads refused to absorb the additional charge placed by the stock yard company.

For more than fifty years carriers delivery stock at Chicago loaded and unloaded without charge to shipper. But on May 21, 1917, the stock yard company increased the charges for unloading and loading to 50 and 75 cents per car respectively, being an increase of 25 cents per car. Carriers transporting live stock to and from Chicago had borne or absorbed the former charges but refused to bear or absorb the increase with the result that the stock yard company collected and retained such additional charges from the shippers.

The knocking out of the charges means a large saving for the live stock owners who ship to the Chicago market. The order instructing the return of the money means that around $200,000 will be turned back to the men who shipped stock to the Chicago market since May 21, 1917. Approximately 800,000 cars have been received at the market during the time in question and it is estimated that 25,000 shippers will share in the money to be divided. Men who purchased stock at the market for shipment to other points are also entitled to a refund because they paid the extra charge. Thus feeders who purchased thin stock at the market are entitled to a refund of 25 cents per car.

CREATING NEW MARKETS

The Dairyman's Problem

THE successful business takes advantage of every market presented for its products. Utilizing the formerly wasted by-products of manufacturing processes has invariably benefited both the producer and the consumer.

Three fundamental principles of business practice which have stood the test of long experience are—

Eliminate waste by utilizing the entire product.

Always seek new outlets for the product.

Create for every by-product a legitimate market.

Now how can these business principles be applied to dairying?

Government reports show that about 41 per cent. of the total production of milk in this country—or about thirty-four and one-half billion pounds—is devoted to butter-making. Of this amount only about four per cent., or three and one-third billion pounds, actually becomes butter. The balance—about thirty-one and one-third billion pounds—goes back to the dairyman as skimmed milk for which some other use must be found. There are no statistics to indicate what becomes of all the skimmed milk, but government figures show that only about two per cent. of this valuable food finds its way into the human dietary.

The Dairy Division of the Department of Agriculture, in a recent bulletin, says about skimmed milk:

"In the past, much skimmed milk has been wasted, both by throwing it away and by feeding it to live-stock, when it could have been used to better advantage as human food. This does not mean that ro skimmed milk should be fed to calves, hogs and chickens. Such a conclusion would be ridiculous, because our markets are not ready to absorb all of the skimmed milk produced, but human needs should be cared for first, and only the surplus skimmed milk should be fed to live-stock. Such a procedure is logical and is based upon economic grounds."

It is apparent that the dairyman is not putting all of his product to its most profitable use.

And this is due largely to the fact that because lacking a fat content skimmed milk does not appeal to the taste.

It is necessary, therefore, to find for skimmed milk a human use, and so improve the product that it will be best suited for that use.

By the addition of a fat, wholesome and nutritious, skimmed milk can be made very desirable for use in cooking and baking.

This fact is what first suggested HEBE, a product consisting of pure skimmed milk enriched with cocoanut fat. HEBE is the first real effort to develop a broad commercial outlet for skimmed milk as human food. It sells to a multitude of housewives who would not otherwise use milk for cooking at all, and thus it increases the general consumption of dairy products.

HEBE BENEFITS ENTIRE DAIRY INDUSTRY

Then the question arises—How will HEBE benefit the dairyman who is not near enough to a HEBE condensery to send his milk there? The answer is that while the HEBE industry is young and HEBE plants few in number, yet every can of HEBE sold is helping to develop this new market, and every bit of advertising put out by The Hebe Company is helping to educate the public to a greater use of dairy products. The ice-cream industry is a parallel case. Although many dairymen are not within shipping distance of an ice-cream factory, yet every milk producer is benefited by the increased demand caused by the use of nearly four billion pounds of milk yearly by the ice-cream manufacturers.

HEBE is not intended to replace milk for direct feeding purposes. It is offered as an auxiliary to the family milk supply, *for use in cooking and baking.* It is honestly labeled as to contents and uses, and is advertised extensively.

Thus HEBE becomes an important factor in the solution of the dairyman's problem—"creating new markets." As an ally to the dairying industry it seeks to make for itself a new market, without interfering with other established markets, and in doing so it increases the general use of dairy products to the profit of the entire dairying industry.

You will be interested in reading our booklet, "The Missing Third." Ask us to send you a copy. There is no charge for this. Address 2881 Consumers Bldg., Chicago.

THE HEBE COMPANY

CHICAGO SEATTLE

DO NOT OVERSPRAY FRUITS

Growers of apples and pears especially are cautioned by the United States Department of Agriculture against excessive applications of spray mixtures for the second brood of the codling moth.

The high market value of fruit products warrants careful attention on the part of growers to the various orchard operations and especially to spraying. The department feels, however, that necessary protection form insects can be secured without danger of leaving spray residue on fruits at harvesting. Careful directions for spraying have been given out by the Bureau of Entomology and the entomologists conected with the agricultural colleges in various states which if followed will protect fruit from insects without leaving an objectionable residue.

Some injury to the fruit-growing industry resulted last year from the seizure by certain health officials of fruit showing considerable spray residue. While it is generally recognized that spraying is an absolutely essential part of fruit growing, the department feels that carelessness in making the summer applications may result in undeserved loss to the growers of fruit through fears of the public caused by the few exceptional instances in which oversprayed fruits may reach the markets.

FARMERS' FIELD DAY AT RIVERSIDE, SAGINAW

All the country rural organizations are co-operating in making plans for the entertainment of the 6,000 people expected to participate in the farmers' field day festivities Wednesday, August 18, at Riverside park. Addresses by prominent speakers, 200 prizes for the winners of the field sports, a baby show and a mystery box hunt are promised as features of the day. Special awards will be made to the shortest, tallest and heaviest farmers present and also to the family coming the longest distance, the largest family and the oldest county pioneer. A special prize will be given the county club having the largest attendance in proportion to its membership.

It is expected that Congressman Joseph W. Fordney, Milo D. Campbell and J. W. Ketcham will give short addresses.

PRIZES FOR STALLION OWNERS

The Horse Association of America is going to divide one hundred dollars ($100.00) in cash prizes among the three stallion owners who report to them the largest number of mares bred to a pure bred stallion this season.

The stallion owner who reports the largest number will receive a cash prize of fifty dollars; the second largest report will win twenty-five dollars and the third largest report will win fifteen dollars.

The reports must be itemized, giving names and addresses of the owners of the mares and the name of the stallion. You can write these affidavits in your own way, so long as you give the facts and make affidavit thereto. Your local bank will attach suitable affidavit on request. Reports must be in by September first, and cover this breeding season only—April first to the date of making report.

Beet Growers to Renew Efforts for Recognition

Mgr. Ackerman Says Time is None Too Early to get Ready for Renewal of Struggle With Manufacturers

THE SUGAR beet issue is not dead, notwithstanding that it has shown little life of late. It has merely been lying dormant, but Mr. C. E. Ackerman, manager of the Growers' Ass'n, says the growers think it is about time to punch it up. The time is approaching when the factories will be around again with the 1921 contract. Perhaps they have already decided among themselves upon the price of beets for 1921. That is their custom. Having succeeded in inducing a large number of farmers into signing the 1920 contracts on the manufacturers' terms, it is reasonable to suppose that they will try the same tactics on the growers' another year.

What Is to be Done?

Even those most out of sympathy with the present year's controversy admit their desire to see the farmers recognized by the factories and given a voice in the making of the contract. They concede that the present contract is one-sided. They want the farmer to have a larger share of the profits of the beet industry. There is almost entire unanimity among the growers upon that point. They are ready to embrace some plan that will insure better treatment from the manufacturers and a fairer division of the profits. There is slight difference of opinion as to what is the better plan to follow this year.

The Michigan Farm Bureau announced several months ago that it would erect sugar factories. But so far as known, that is as far as the Bureau has gone. The co-operative sugar plant idea appeals to the average farmer. It is being tried out in the west. It is not yet known with what success. The building of sugar factories, however, involves a large sum of money, time, and intelligent management. The farmers could no doubt scrape together the money, but the time is too short in which to build factories for operation next year, and up to the present time the management has not been discovered. So it is the belief of Manager Ackerman, and others, that the farmer-owned sugar plant idea is not feasible at this particular time and that the best way for the growers to secure their just rights is to organize along the lines adopted last spring. It is their belief that if the campaign is made early enough, before the factories get into the fields with their 1921 contracts, the great majority of those who are producing beets this year can be secured as members of the organization.

It is frankly admitted that some who are growing beets this year may be satisfied with their returns from the crop, providing the government does not step in and set the price. That this very thing is likely to happen it now seems certain. The reasons for this will be discussed later. It must still be borne in mind, however, by those who are growing beets this year that no matter what the profits they may make from their crops, the manufacturers will make a far greater one. If they are satisfied, after taking all the risks incident to the growing of the crops, to give the manufacturers five to seven times as much profit as they receive, they may as well be left out of the reckoning. But there will be many who have a clearer conception of justice than that who will co-operate for a better contract.

The majority of the beets are looking good and a fair crop is in prospect. Whether the yield will represent a normal tonnage cannot yet be told. We have seen some beet fields that have been abandoned to the weeds and grass. We have seen others where the beets were growing in patches, and still others where the crop will not be worth pulling. In the two latter cases the land is unsuited to the growing of beets and the farmers who planted the crop will lose money. It is probable that there is a large enough acreage of poor stands of beets to cut tonnage far below normal.

What the Government May Do

Officials of the Utah-Idaho Sugar Co., have been indicted for profiteering by the United States government under charges preferred by the Federal Trade Commission. The company is alleged to have arbitrarily increased the price of its sugar from $13 a hundred pounds to $22.75 per hundred. Bear in mind that this company paid for their beets on the basis of $13 sugar. A short time after the period had elapsed on which the price to the farmer was figured, the board of directors ordered an advance of $9.75 per hundred, which represented a clear additional profit on the balance of sugar remaining in the company's possession. Think a little over this. The company's profits per ton of beets on 13 cent sugar would have been large, probably in the neighborhood of $10 per ton. The extra $9.75, all profit, increased their profit per ton of beets, at least $25, or a total approximate profit of $35 from each ton of beets out of which the sugar was manufacturer that sold at $22.75. Compare: Farmer received in the neighborhood of $12. That had to cover both cost of production and profits. The manufacturer, for a portion of the crop, received a clear profit of around $35 per ton. In other words the manufacturer's profit was three times as great as the farmers gross return from his crop.

Why do we cite this case in far off Utah? Because sufficient evidence exists to warrant our suspecting that identically the same thing happened in Michigan. Of course, the manufacturers in this state claim their entire output was sold at the price on which payment for beets was figured. There is no way for the layman to prove the correctness of this statement. We have to take the manufacturers' word for it. At the same time there are vague rumors about that certain men largely interested in the Michigan sugar companies formed a pool and gobbled up a lot of Michigan sugar at 12 1-2 cents a pound which they later sold at 25 cents, cleaning up several hundred thousand dollars on the deal.

Now if the government suspected that there was profiteering on the part of the western companies, we know of no reason why they should not be as equally suspicious of the Michigan sugar companies. Somebody made enormous profits out of the 1919 sugar crop. It wasn't the farmers. Who was it? Someone will make enormous profits out of the 1920 crop. And again it will not be the farmers. The Attorney General of the United States and the Federal Trade Commission know this as well as you and I, and we cannot believe that they are going to pass right by without looking in. If the government conducts an investigation in this state and it finds that the farmers are under contract to deliver beets at $10 per ton which will enable the sugar companies to sell their output at 10 cents per pound and make a nice profit on the transaction, does anyone think they are going to permit the companies to sell

In Sugar Securities

The First Mortgage Serial Bonds of the Utah-Idaho Sugar Company Yielding 7¾%

offer an investment opportunity worth your careful consideration.

These bonds are a direct obligation of a company which produces about one-tenth the beet sugar output of America. They are secured by assets equivalent to $4,000 for each $1,000 bond, and by a proven earning capacity which, for the past four years, has averaged more than five and one-half times the maximum interest requirements on this issue.

A choice of maturities is offered from one to ten years.

(EDITOR'S NOTE: *In a later issue we shall have something to say about the surplus and profits of a well-known Michigan sugar company.*)

HARVEST

By Charles Dudley Conrad
in The Harvester World —

This is the climax of a perfect year,
The summer days which joy and gladness bring
All find fruition and fulfillment here
The yellow grain which rippled gay and blithe,
In every vagrant wind, whose worth is more
Than all the minted gold Earth holds in store
Has given up its treasures to the reaper's scythe.

Utah Farmers to Build Factories

THE BUSINESS Farmer is in receipt of the articles of incorporation and contract of the Pioneer Sugar Company, which has been organized in Salt Lake county on a strictly co-operative basis, ownership of shares being confined to bona fide growers. Our informant is Mr. C. G. Patterson, who spoke at the Michigan beet growers' mass meeting in Saginaw last winter. Mr. Patterson is secretary of the new company.

The initial capitalization is $50,000, which will be increased as necessary. All but one of the incorporators are farmers owning land and growing beets. Meetings are being held where the proposition is discussed and subscriptions taken for stock. Michigan growers will watch with interest the progress of this company.

Utah Farm Bureau Makes 1921 Demands

ACCORDING to "Facts About Sugar," the farmers of Utah who are not participating in the new co-operative venture, are formulating through the state farm bureau, their demands to be presented to the sugar companies in the negotiations over 1921 contracts for 1921. The main point which the farmers will press will be the introduction into the contracts of a sliding scale provision which will take into account the sugar content of the beets as well as the price of sugar. Idaho farmers obtained this year an alternative contract providing for payment on the basis of sugar content this year, and a similar provision is desired by the growers of Utah. Michigan growers, please take notice.

How Shall We Fight the Grasshopper Plague?

Readers of Business Farmer Believe That State Should Take Charge of Eradication Work

THERE HAS scarcely been a season in recent years that Northern Michigan has not experienced a more or less destructive visitation of grasshoppers. They appear some times as early as the middle of May, if the winter has been mild and the spring forward. They grow rapidly and about the first or middle of June when the green crops are springing up they invest the fields and unless checked usually do much damage. As we have said this happens nearly every year so that in a measure the farmers of the affected sections have become accustomed to the pests and take the losses to crops in a rather philosophical manner. Last year the frequent rains of June and early July and the comparatively cool weather kept them in check. Moreover, greater efforts were put forth this year to destroy them, and as we shall later show from signed statements from farmers the damage has been less than usual.

Habits of Hoppers

The grasshopper is a member of the locust family mentioned in the Bible which often caused famine in the biblical lands by destroying the entire season's crops. Countries of Europe, Asia and Africa knew the locust long before America was discovered. Concerning their earlier depredations the Americana tells us:

"From time to time bodies of certain species swept from one region to another in swarms many square miles in area and so dense as to darken the sun, feeding on grasses and herbage and consuming not only crops and pasturage as if by fire, but stripping bushes and trees of foliage and even of the bark. In the ancient world such visitations, which frequently extended into central Europe caused extensive local famines, some times resulting in the loss of hundreds of thousands of human beings and vast numbers of grazing animals. Such plagues lasted for two or three years, the hosts breeding numerously at first, but gradually dying out and ceasing to reproduce outside the limits of their permanent breeding grounds."

In the United States, the Americana tells us, "the Rocky Mountain locust has been a scourge of agriculture west of the Mississippi ever since settlements began there. Among the more recent plagues were those of 1856 and 1874, the latter enduring three years and causing widespread ruin throughout the whole region between the Mississippi river and the Rocky Mountains. The federal government appointed a commission of entomologists to investigate the habits of the insect and its reports are exhaustive essays on the subject." As a result of the subsequent efforts to extinguish the pest, "the troublesome grasshoppers now breed in considerable numbers only in Northern Idaho and central British Columbia. Swarms occasionally migrate and do damage, but the extensive plagues of the past will probably not recur."

Cut-Over Lands to Blame

It is clear that this chronicler has never visited Northern Michigan during the grasshopper season else he would have included that section in his list of hopper-infested sections. There is one very good reason why the hoppers multiply so rapidly and thrive in so great numbers in the fertile sections of Northern Michigan and that is because of their proximity to the plains and the cut-over lands. In all sections where there is a large acreage of uncultivated lands the hoppers are much worse than in well cultivated regions. The reason for this is clear when their breeding habits become known. This will be discussed later.

The 1920 Visitation

The hoppers put in an appearance this year about the first or middle of June. Quite in keeping with long established customs they immediately began their work of destruction. They came out from the cut-over lands in great numbers and migrated straight across the northwestern part of the state. Some localities they almost ignored. In others they settled down and decided to stay a spell. They fed upon the green wheat, oats, corn, buckwheat and seemed especially fond of the new grass seeding to which of all the crops they have done the most damage. In rare instances they sampled the potatoes, but there are no indications that any damage to speak of was done to this crop. In some counties the county agent exhorted the farmers to buy poison and spread it over their fields. The demand for poison exceeded the supply. In counties where the poison was used extensively the damage was negligible. In other counties where poison could not be had or where there was no county agent to take the lead the damage was material. But in spite of the report of Crop Statistician Church that the loss will exceed $1,000,000 the statements received from actual farmers of the infested counties do not bear out that statement. In any case the damage does not appear to have been as great as last year. Our readers will be interested in the results of the survey we have made of the hopper situation and can judge for themselves whether the facts warranted the "scare" stories which were published.

Farmers Differ

It appears from the reports received that the damage by hoppers varied greatly in different sections. Some counties report almost no damage; others slight; still others heavy loss. Even adjoining townships in the same counties report different experiences with the hoppers.

Damage Slight in Grand Traverse

Nine correspondents in Grand Traverse county all agree that the damage in that county is not as great this year as last. S. L., of Acme, says: "We have grasshoppers but as to them destroying entire fields it is not so. They have done very little damage this year. We have been very lucky. Last year we were hit pretty hard with them but this year the damage has been very little. Thanking you for taking so much interest in us northern farmers."

Geo W. A., of the Green Valley Stock Farm, of Bates, writes: "The grasshopper situation has been enlarged a good deal. They have been awful thick but I do not believe there is a field in Grand Traverse county entirely stripped. They have damaged the old meadows and practically all the new seeding is eaten up and they will cause quite heavy loss among the oats. If the county would look after the non-resident land we could handle the grasshoppers all right. They hatch in the old sod and brushland, eat all there is there and then come onto the farms."

E. A. W., of Traverse City, says: "The grasshoppers have done practically no damage to crops in our neighborhood, only they have troubled the gardens to some extent. We cannot see that they are any worse than they were a year ago."

H. B., of Traverse City, writes: "They are not so bad this year as last. Last year we had no oats, beans or seeding. This year we have oats, beans and a fair crop of seeding left and I live in a grasshopper county. I have seen them ten times worse. Ten years ago they ate everything in sight, so don't let them put anything over on you. This is the western part of Grand Traverse county."

Benzie County

Out of five correspondents in Benzie county only one claims that the situation is as bad as painted. E. W., of Beulah, says: "I have not seen anything in the press too bad about the pest. The situation is getting alarming. Some are using poison which helps but will never rid them until all waste as well as cultivated land is poisoned as early in the spring as the hoppers commence to come. One neighbor is keeping them down with four or five hundred chickens." After giving specific instances of loss this correspondent concludes, "I think the hoppers are as thick this year as last but we have more rain and don't notice it as much."

S. F., of Elberta, gives his views as follows: "The grasshoppers are bad enough but not so bad as claimed. Some of my neighbors have put out poison with indifferent success as to hoppers but very successful in killing horses, cattle and poultry. I have not put out any as I do not think I have them as bad as some. A short rotation is the best way to fight them. They have damaged my hay and oats some but not more than they have for some years past. One man has lost a few rows of beans on the side of the field next to his meadow. Two brothers lost their cabbage crop owing to hoppers eating the young plants in the bed before they were old enough to transplant. This was partly their own fault in planting the bed in the middle of an old pasture with old sod on all sides. One of these men lost a cow with poison he put out for the hoppers."

J. T. W., of Beulah, says "No, they are not as bad as reported but bad enough," while F. S. of Wallin, after admitting some loss less than last year, however, concludes encouragingly, "On the average there is more grain in this locality than last year. Potatoes and corn look good at present."

Damage Large in Antrim County

Four correspondents in widely separated localities all agree that the damage in Antrim county is greater this year than in any previous year. F. J. D. of Alden, says: "The grasshoppers are much worse this year than last. At present they are eating up the oats and buckwheat. They have already destroyed hundreds of dollars of grass seeding. Between grasshoppers and taxes many of our farmers will have to give up farming. We have tried to kill them with arsenate of lead but it doesn't seem to amount to much."

O. B., of Bellaire, is just as positive about the damage. "The grasshopper plague is so much worse this year than in former years that there can be no comparison," he says, and

(*Continued on page* 11)

The Truth About the Grasshopper Plague

ABOUT THE first of June the enterprising press correspondents of some of the state dailies who had possibly never seen a grasshopper before sent out stories broadcast that the greatest grasshopper plague in the history of the state had struck Northwestern Michigan, and were hungrily engaged in eating up entire fields of hay, grain and potatoes. Some of the stories of the ruin were so ridiculous that the editor who has himself lived among the grasshoppers doubted their authenticity and said so in an editorial which was published in the June 19th issue of The Business Farmer. Immediately there was a great furore among the story tellers. Some of the newspapers in the Northwestern part of the state which were never before known to turn a hand to help the farmer verbally berated The Business Farmer for its skepticism, saying that the farmers were more interested in saving their crops than they were in sustaining the market value of their farms. They did not explain, however, how exaggerated press reports spread over the entire United States were going to help kill the hoppers. After the editorial was published the editor was in Washington, D. C., six hundred miles away from Michigan and the first subject which a brother farm paper editor from one of the far western states brought up as the "terrible" grasshopper plague in Michigan. It needs no explaining on our part to show what an effect such propaganda would have upon the value of Michigan farms and upon the future of the rural communities of the state. Upon our return from Washington we decided to make a survey of the hopper situation and sent letters to ten farmers in each of ten counties in the section said to be the worst afflicted. The almost unanimous opinion of these farmers was that the hopper plague was not as bad as in previous years, the damage less, and that no fields to their knowledge had been entirely destroyed. It is true that in isolated sections the damage was very great and a few farmers declare that the reports were not exaggerated. It is not the primary purpose of this article to defend our position upon the matter, but to present the true facts and more important than all else to discuss means for the future control of the pest. Of all newspapers published The Business Farmer ought to be and is the most interested in the agriculture of Northwestern Michigan because of its large circulation in that section. It does not believe in telling to the world exaggerated stories of grasshopper plagues because its subscribers living in that section may want to sell their farms some day and who would want to buy a farm in a section so hopper-ridden as the newspapers have claimed Northern Michigan to be? We do believe in discussing the situation frankly among ourselves and instead of waiting another year until the hoppers have begun their work, plan now the means of combatting them.—Editor.

Legislation Needed to Compel Poisoning of Grasshoppers

THE GRASSHOPPER pest exists through no fault of the farmer. He suffers great loss as a result of its depredations. Indirectly the state also suffers a loss. The farmer is powerless to control the pest unless the measures of control are used on all the land affected. Millions of acres of land in the hopper ridden sections are owned by the state, lumber companies and other non-residents. Because none of these are engaged in the production of crops they refuse to help eradicate the hoppers. This is not right. Either the state should take complete charge of the grasshopper eradication, or else every land owner should be forced to spread poison on his property. The Business Farmer pledges itself to the following program: First, if possible, to secure a law at the next session of the legislature that will put the entire job of grasshopper control into the hands of the state, under the supervision of the M. A. C. If that cannot be done, then to enact legislation which will compel all land owners to combat the pest or in case they refuse, to authorize the local authorities to spread poison upon their lands and levy taxes against the property owner to pay the expense.—Editor.

Income Tax in Other States, Why Not Michigan?

Next Session of Legislature Should be Asked to Adopt Measures for More Equitable Taxation

By C. H. BRAMBLE
Overseer Michigan State Grange

The Scully Income Tax Bill?

DURING the last session of the legislature Sen. Scully of Almont introduced a resolution to submit to the people an amendment to the Constitution to provide for an income tax. The resolution was referred to the Committee which thought so much of it that they kept it during the entire session. The Business Farmer has always believed in the income tax, for the same reasons as set forth by Mr. Bramble in the accompanying article, viz.: because it compels people to pay taxes according to their ability to pay. Other states, as Mr. Bramble shows, hove adopted income tax laws, and there is no reason why the next legislature should not take the subject up.—Editor.

AMENDMENT to section 3 article 10 of the constitution: "The legislature shall provide a law, a uniform of taxation except on property paying specific taxes, and taxes shall be levied on such property as shall be prescribed by law. (Provision may be made by law for a tax on incomes, which tax may be graduated and from which reasonable exemptions may be allowed. For the purposes of such tax property and persons, firms and corporations upon which such tax may operate may be classified. All taxes assessed and collected on incomes derived in whole or in part from the use or operation of property that is now taxed by law for the benefit of the primary school fund, shall in the proportion that such incomes are derived, be credited to such fund.) Provided, that the legislature shall provide by law a uniform rule of taxation for such property as shall be assessed by a State Board of Assessors and the rate of taxation on such property shall be the rate which the State Board of Assessors shall ascertain and determine is the average rate levied upon other property upon which ad valorem taxes are assessed for state, county, township school and municipal purposes."

The income tax is the outgrowth of our modern civilization and democratic ideas. It is appling the principle set forth by Adam Smith in his "Wealth of Nations." Namely: "That the subjects of every state ought to contribute to the support of governments as nearly as possible in proportion to the revenue they enjoy under the protection of the state." It is conceded by all authorities that the personal and intangible property of the state and nation has very largely escaped taxation. The first income tax was the outgrowth of the democratic ideas in Florence at the close of the fifteenth century. Their attention was attracted to the enormous fortunes made in trade and commerce that escaped taxation. Later it was enacted in England during the first part of the nineteenth century to finance their many wars. It was fixed upon the British government as a national policy in 1853 by Gladstone and is today Great Britain's chief source of revenue as well as in France and Italy. United States used it to finance the war of the Rebellion. Repealed it in 1872. It was again enacted in 1895 and declared unconstitutional by a divided court. On the recommendation of Roosevelt in 1900, our constitution was amended by vote of the people early in this present century. An income tax was levied by the federal government to finance the late world war and will this year produce a revenue of at least five billion dollars. It carries out Adam Smith's idea of taxation. It measures a man's tax by his ability to pay. In fact, it is the democratic idea of taxation, namely: a square deal to all. The taxpayers of Michigan when they paid their December taxes, began to realize a need of some system of taxation that would reach the intangible property of our state. It is estimated by careful financiers that the intangible personal property escaping taxation in Michigan has a value and an income far in excess of the value and income of the real estate. Our taxes in one short year have been increased 91 per cent. It has about reached the limit. In 1918 the intangible property of Wisconsin under an income tax paid over $10,000,000 of revenue to the state and municipalities. In Michigan we paid an excess of over former years of over $9,000,000 which was added to the property tax. The income tax has been recommended by our state tax commission in lieu of personal intangible property taxes. Amendment to our state constitution was introduced in the last legislature but was given no consideration by its members. It never will be considered as long as the representatives from the commercial centers dominate our legislature. A study of a history of income tax will show that it has always been opposed by the recipients of large salaries and large incomes and by large industrial centers. The tax is just and is opposed from selfish motives only, therefore, it is up to the voters of the State of Michigan to see that a legislature and governor is elected next fall who will revise our taxing system and provide means for reaching by taxation the intangible property of our state.

The following is a synopsis of what other states in the union are doing.

Study these carefully and I think you will find something that will fit the condition of Michigan.

In 1915 the State of Connecticut imposed an income tax on manufacturing and mercantile corporations based on the reports to the federal government. The rate is 2 per cent upon the net taxable amount reported to the federal government.

Delaware passed an income law in 1917; imposed a 1 per cent income tax upon all incomes over $1,000. This income tax has exemptions and allowances very similar to the federal income tax law.

Missouri passed an income tax law in 1917. Imposes a one-half of 1 per cent on all incomes from individuals, corporations and companies, above $3,000 for a single person and $4,000 for husband and wife. The exemptions and allowances are similar to those under the federal law.

Oklahoma passed an income tax law in 1910 which was afterward amended in 1915. This is a graduated income tax on all net incomes above $3,000 for an individual and $4,000 for a husband and wife with $300 exemption for children (a) Seven and one-half mills on the first $10,000 of excess income above exemptions. (b) On the next $15,000 of such excess one and one-half per cent. (c) All incomes in excess of the above 2 per cent.

South Carolina has a graduated income tax above $25,000 on all net incomes from whatever source. Incomes $2,500 to $5,000, 1 per cent; $5,00 to $7,500, 1 1-2 per cent; $7,500 to $10,000, 2 per cent; $10,000 to $15,000, 2 1-2 per cent; $15,000 and over 3 per cent. The world incomes means gross profits after deductions made for necessary expenses for carrying on business or occupation.

Virginia imposes a tax of one per cent upon all net incomes from whatever source above $1,200 for individuals and above $1,800 for husband and wife. Added allowance for $200 for each child. The exemptions are very similar to the federal law.

West Virginia levies an excise tax for the privilege of doing business in the state on all corporations and companies organized for profit. The act is a model on the federal insurance law. The rate is one-half of one per cent on net income of all kinds of business transacted and capital invested in the state.

Last year the State of New York found itself facing a deficit of $53,000,000 due largely to prohibition and also due to the inadequate property tax on personal and the allusive nature of personal property as a revenue producer. She therefore imposed a graduated incomes tax on all incomes and profits; above $1,000 for an individual and $2,000 for husband and wife. The tax is one per cent on the first $10,000 above exemptions of one per cent. On the next $40,000 two per cent and above $50,000 three per cent.

Massachusetts income tax places a tax of six per cent upon the interest received from notes, bonds, money at interest and other evidences of debts, so that a five per cent bond actually pays three-tenths of one per cent of principle.

It exempts the above from the general tax. It does not apply to mortgage interest as mortgages are otherwise taxed.

A certain portion of interest paid on indebtedness can be deducted from above tax.

It levies one and one-half per cent on excess, over $2,000 of net incomes from professions, employments trades and business.

There is an allowance of $500 for husband and wife and $250 for each dependent not to exceed $1,000.

One and one-half per cent on annuities in excess of $300.

Three per cent on gains on speculations, dealing in intangible property. This law seeks to supplement the tax on tangible property by placing an income tax on intangible property, that is fair and reasonable to the investor and a tax that is hard to pass along to the other fellow.

In North Carolina taxpayers are required to show on their lists their gross incomes from all property not otherwise taxes—salary and fees, annunities, trades and professions, and to give the sources thereof.

In excess of $2,150 to $2,500 the tax is one per cent; $2,500 to $5,000, one and one-half per cent; $5,000 to $10,000, two per cent; $10,000 and over two and one-half per cent.

Wisconsin passed an income tax law in 1911 which has been amended from time to time to make it more workable. This combines the two ideas of taxing persons progressively, according to ability to pay and taxing real property according to the value. At the time of passing this law she repealed a property tax on intangible personal property and provides that in case taxes are paid on personal property, the receipt can be used with which to pay an equal amount of income tax. The money derived from the income tax is apportioned as follows:

Seventy per cent to the local taxing unit.

Twenty per cent to the county and ten per cent to the state.

It has cost on the average one and one-half per cent to collect this tax. The state has derived twice as much income from this tax as it has cost to administer the law. The first year she collected $3,501,000. The estimated tax upon the personal property which this law supplanted would have been $703,000. In 1917 she collected $5,500,000 and in 1918 the estimated returns was over $10,000,000.

This law exempts individual incomes up to $800, husband and wife, $1,200 and for each child or dependent $200. The exemption and allowances are similar to those under the federal law. Its intent is to supplant the personal property tax. The rate is one per cent upon the first $1,000 of excess profits and one and one-quarter on the second, and one and one-half on the third, one and three-fourths on the fourth, two per cent on the fifth, two and one-half on the sixth, three per cent on the seventh, three and one-half on the eighth, four per cent on the ninth, four and one-half on the tenth, five on the eleventh, five and one-half on the twelfth, all additional amounts six per cent. On corporations on the first $1,000 two per cent, increasing to five per cent on the sixth thousand and six per cent above that amount. This law apparently is very satisfactory.

Campbell-for-Governor Sentiment Grows

A FEW weeks ago the "wise" politicians smiled when the Campbell-for-Governor candidacy was mentioned. Today they are almost a unit in admitting that the gubernatorial nomination lies between Milo D. Campbell and a Wayne County candidate. To some of them this realization is not pleasing. Campbell is not a man the political bosses of the state would like to have in the Governor's chair. He does not take orders easily. They would prefer someone else. But having been forced to concede that Campbell's chances of winning the nomination are excellent, a few of the very ones who were the most opposed to his candidacy at the start are climbing onto the Campbell band wagon in order to be with the winner.

The farmers of Michigan are to be commended for the unanimous way in which they are supporting Mr. Campbell. It can be said that never before was greater interest manifested by the farmers in a political campaign than they are taking in the present one. Mr. Campbell receives two to three times as many invitations to speak at farmers' meetings as he can possibly accept. Every day he speaks at at least one farmers' meeting and some times two.

A few days ago a farmer told a member of the Campbell committee that he had written to his relatives in the city urging them to vote for Mr. Campbell. The idea is so good that we are passing it on to other readers. Readers who have sons, daughters, brothers, sisters or other relatives living in the towns or cities of the state will do themselves and the other farmers of Michigan a service if they will see or write to these relatives explaining why they should vote for Mr. Campbell. Don't neglect to do this, at once. It will help a lot in getting Mr. Campbell votes in the cities where they are badly needed.

The Farmers' Campbell-for-Governor Committee, through its chairman Mr. A. B. Cook, announces that upwards of a hundred dollars has been collected or pledged to the Campbell fund up to August 1st. The following subscriptions were among the first received. The names of other contributors will be published in a later issue. If you have not sent your money to help defray the expenses of the Committee please do so at once, as it is needed. Any sum from 50 cents to $50 is acceptable. Mail your subscription to A. B. Cook, Owosso, Mich., who will receive it, spend it, and make a strict account of it when the campaign is finished.

Subscriptions Received up to Aug. 1

CORRECTION

County Agent Bishop of Lapeer county advises the M. B. F. that the Lapeer County Farm Bureau has not officially endorsed the candidacy of anyone for the state legislature which idea was unintentionally conveyed in a recent issue of M. B. F. Members of the Lapeer farm bureau will act, however almost as a man in supporting the candidacies of Mr. David Butler of Deerfield and Dr. O. G. Johnson of Fostoria.

The New Railroad Rates

THE INCREASED rates granted to the railroads by the Interstate Commerce Commission gives us all something to think about. You cannot add 20 per cent to passenger fares and 20 to 40 per cent to freight tariffs without increasing the cost of farming and without reducing the farmer's income.

It used to be that a farmer living in Grand Traverse county could ship a carload of potatoes to Chicago at around 25 cents a bushel. Under the new rates the cost will be nearer 35 cents a bushel, or an increase of from $40 to $60 per car. Should the buyer refuse to accept the shipment and the farmer has to go to Chicago to investigate the round trip will cost him under the new rates about $25 instead of $14 a few years ago and $21 as at present. The new rates will add a couple dollars to the plow he buys, $6 to $10 per ton of fertilizer, and 2 to 5 cents per rod of fence. Remember that the farmer not only pays the freight on the finished product but upon the raw materials which enter into its making.

The American farmer cannot be expected to meet these large freight increases without getting something in return. He wants service. When he needs cars in the fall of the year to move his crops he doesn't want to be obliged to wait six months after he places his order, forcing him to tie up his money and his credit, and ship perishables in freezing weather. He didn't used to have to put up with such treatment and he doesn't want to now. We are skeptical about the ability of the railroads to make any material improvement in their service for a year or two at least. But we are willing to give them the chance. Congress was kind enough to hand the roads a nice juicy plum and the people will be patient while the roads are digesting it, but look out if the results are not forthcoming.

We are going a long, painful and expensive way around our railroad problem. Congress made a horrible blunder when it returned the roads to private owners in the midst of the chaos attendant upon the reconstruction period. The entire prosperity of the nation is wrapped up in the railroads. If the railroads fail, industry fails and Old Man Panic gets on our trail. Had Congress used any intelligence in considering the railroad problem it would have foreseen that the roads needed the directing hand of a fatherly government for several years following their breakdown. What the roads have needed and still need and what the government could have best supplied was capital and a strong centralized management. Had the opponents of government operation put aside their silly prejudices and given the government one-half the chance to make good that they have given the railroads through the Cummins-Esch bill, who can doubt but that the government would have quickly rehabilitated the roads, improved the service and made a profit at the same time? Who would have regretted dumping every available dollar into the roads six months ago in order to have forestalled the situation in which we find ourselves today?

But the milk has been spilt so why weep? Congress said the roads must have higher rates. We cannot expect the roads to operate at a loss even if they could and would. If they are losing money both their own and the public's interests are endangered. The higher rates we will pay and try to be cheerful about it, but we want value received for our money. If we do not get it,—well,—government ownerships waits just around the corner.

The School Amendment

WE HAVE been much interested in the views expressed by our readers both for and against the proposed amendment to abolish parochial schools. With a few exceptions most of the letters received have been surprisingly free from abuse and religious bigotry. Some who favor the proposed legislation are plainly moved by religous bias. Others are as plainly influenced by an honest desire to raise the standard of citizenship.

There seems to be a good deal of misunderstanding as to the exact difference between the curriculum of the parochial and the public school. There is a wide-spread belief on the part of Protestants that the teachings of the parochial schools are carried on behind closed doors, and that the student, particularly of the Catholic parochial school, is taught that his first obedience is to his church rather than to his country. These statements are indignantly denied by the supporters of the parochial school. They declare that the subjects taught conform with public school requirements; that the public is free to attend their schools; and that nothing is imparted to the student that would shake his allegiance to the United States.

Mr. Jas. Hamilton, author of the amendment, declares in one breath that no religious issue is involved, and in the very next breath he disproves his own statement by quoting alleged sayings of Catholic authorities in an attempt to show that the Catholic parochial school is an evil institution, and that the Catholic church is, perforce, likewise, evil. Close examination of Mr. Hamilton's anti-parochial school literature dscloses no more potent reason for the abolishing of the parochial school than Mr. Hamilton's well-settled notion that the Catholic church should be destroyed and that a good way to do it is through the parochial school. Such being the real purpose, again we ask, why camouflage it by a specious attack upon private schools? Why not define the issue clearly and ask the people of Michigan to amend their constitution to prevent the Catholic religion being taught in this state? The Constitution of the United States contains the answer to that question.

In the absence of any proof that the doctrines which are taught in parochial schools actually pervert the student's conception of good citizenship and loyalty to his flag and country, the opponents of the private school must fall back on their last defense which is opposition to the teaching of the Bible in the lay school. That is, indeed, a strange defense. The vast majority of pupils who graduate from public schools know infinitely more about dead languages than they do the living truths of the Bible. They can quote glibly from Caesar or Homer or Goethe, but ask them to repeat the tenth commandment and they are stumped. We agree with several correspondents that instead of condemning the practice of giving religious instruction in the private schools we should extend the practice to the public schools and give every student, at the option of the parents, an opportunity to study the Bible.

We have asked the Public School Defense League for concrete proofs that the parochial school is a menace to the nation. These proofs have not been supplied. We are, therefore, constrained to abide by our early decision. We will NOT vote for the amendment.

The State Fair

THE MICHIGAN State Fair will open Sept. 3rd for its annual ten day exposition. The fair, we are assured, will be up to its usual standard of excellence both as regards to exhibits and entertainment. It can no longer be said of a Michigan State Fair that it promises to be the "best" of previous expositions, for honest critics have said that the State Fair reached about the highest pinnacle of perfection last year and that the task confronting the fair officials is to maintain this standard of perfection, whch the present year's expostion promises to do in every particular.

The greatest value of the State Fair lies in its educational features. There's fun and laughter to be found in the side shows. The spectacular stunts of the airmen, the feats of the acrobats, the daring of the auto race fiends, and many other marvelous exhibitions of skill and courage cause us to open our mouths in wonder. They fill their purpose no doubt in entertaining those who have no time for weightier things. But they leave us nothing that we may take home with us for the brightening of our lives and the betterment of our occupations.

But among the exhibits there is both inspiration and education. No man can view the best specimens of Michigan live stock and crops without having aroused within him a commendable ambition to match the results of the prize winners. Agricultural progress receives its greatest impetus from the inborn desire of those engaged in the occupation to produce a better crop of grain, vegetables, fruit, etc., than has ever been produced before. Who can say to what extent the agricultural expositions of the State have contributed to the development of crop and live stock standards? That their influence has been great no one can deny. The inspiration to raise better products on the farm, and a large measure of the necessary knowledge, can be gained by annual attendance at the Michigan State Fair. Take the folks and go.

The Other Side of Farm Life

THE FARM! It drives you. It exacts hard labor. It demands long hours. It isolates you. It gnarls your hands and brings furrows to your brow. It deceives you. Today it smiles with promise. Tomorrow its fields may smirk over the ruin of your hopes. It is a poor paymaster. Some years it gives you nothing for your toil; other years a beggarly pittance; rarely, it rewards you handsomely.

Yet, for all its faults, we love it!

For all its faults it offers happiness greater than money can buy in any city on the globe.

There you may, if you are diligent and thrifty, earn enough to feed and clothe you and lay aside a bit for old age. There you may live in peace, quiet and security, far from the mad rush of the city. When the day's work is done you may sit in the cool of the evening in the comfortable old rocking chair with your children about you. Down in the barn the cattle low contentedly as they munch their hay, and the pigs emit an occasional squeal as they quarrel over a stray corn-cob. The chickens in the roost gradually cease their clucking. Twilight absorbs the last faint rays of the expiring sun. The stars peep out, one by one, and give you a friendly wink. The night deepens. A vast contentment with all the world takes hold of you, and you know that life is sweet and God is good.

This is the other side of farm life that makes us forget our woes; drives away our worries; levels our obstacles; and tempers our disappointments. Greater rewards than this cannot be found this side of heaven.

Mott, who would be governor, talks about "my" economy platform as though he had a patent on it. All the gubernatorial candidates are talking about "business administration," "economy," etc., but the only man who has presented a definite program is Milo D. Campbell, who declared six months ago that he would reduce the number of state departments, bureaus, commissions, et al, by the same kind of consolidation plan as Gov. Lowden worked out in Illinois. All others who talk economy and business administration are simply borrowing from Milo Campbell.

We suggest that the five troopers who are "protecting" the three thousand orchards of Berrien county be sent to Russia to curb the Bolsheviki.

What the Neighbors Say

PAROCHIAL SCHOOL GRADUATES SHOW GREATER DELINQUENCY

I am hoping that the following will be acceptable because I deem that a reply is necessary to C. R., Tuscola county and ex-Gov. Ferris. I don't claim any superior knowledge and am probably not as well read as either of the above gentlemen, but what I have to say I know are facts and have the statistics to prove.

In the first place the proposed school amendment is not against any religion as a religion. Second, this amendment is not against parochial or private schools, but we do insist that all children attend the public school first. The out-come of such an arrangement would be a broader and more tolerant consideration of the opinion of their fellowman.

Why do these parochial school supports fear to allow their children to attend the public schools, when they still have a chance to teach them additionally in private school?

What do they fear? Democracy? They say they wish to care for the spiritual welfare of the child. All well and good. But it is absolutely necessary that religion be taught in school hours. Isn't there 18 hours remaining of each day, school day, beside Saturday and Sunday. If it is necessary, then it is our duty as public spirited citizens to demand that religion be taught in our public schools.

Are the Protestant products of the public schools any more wayward, either spiritually or morally.

The enemies of this amendment claim that the parochial school is also necessary to teach the proper morals to the children. Is it? Let's see. Attention Mr. C. R. with your remarks that parochial schools make Christian law-abiding citizens of our youth.

In 1912 Cardinal Farley of N. Y. told the Federation of Catholic Societies "We are too generously represented in penal and other institutions." In 1916 the Rt. Rev. Mgr. Francis Wall of N. Y. said, "It is a dreary commentary upon our religion that so many of our children should pass before the judges and receive sentence for felonies and misdemeanors."

At the same meeting, Judge Cornelius J. Collins said he had facts and figures to prove that Catholics were more delinquent than those of other faiths; that in the children's court 146,000 cases were brought up every year; 60 per cent of which were Catholic, 30 per cent Jewish and the remainder just 10 per cent—of all other faiths. And, get this, only one-fourth of that population are Catholics. Rather looks as if the parochial school law-abiding citizens and their moral welfare had gone glimmering.

Just one more. Over 65 per cent of prison convicts of all grades were attendants of parochial schools, while less than 5 per cent are graduates of our public schools. This is according to Washington Bureau of Statistics. Now the cost should this amendment become law. At the present time there is approximately $200,000,000 worth of revenue producing church property, not including houses of worship, exempt from taxes in this state. Think of it. Place this property on the tax rolls where it belongs and the income derived therefrom will easily take care of the increased cost of the public schools.

I think the above will also answer ex-Gov. Ferris in his statement that these parochial schools in no-wise interferes with our political or social right.. Our constitution says that the church and state are separate. The Syllabus of Pope Pius IX says "Public schools open to all children for the education of the young should be under the control of the church and should not be subject to the civil power nor made to conform to the opinions of the age." It also says, "The church and her priests have the right to immunity from all civil laws." "The people are not the source of civil power." From our Constitution, "Spiritual power comes from God. Civil power from the people." And our public schools are under civil power. Are the above extracts from the "Catholic Law" productive of good citizenship in its broadest meaning? I will leave it to you.—*R. E. Bennett, Sanilac Co.*

CURRIE FOR CONGRESS

We appreciate your columns and wish you would give us even more information about our public officials. In this district it is evident that the leaders of organized labor are fighting Congressman Currie. Many of us feel that it is a good thing that we have a man in Washington who dares to oppose some of their radical and unfair demands.

Mr. Currie grew up with us and for many years was our neighbor on the farm. From practical experience he understands the problems of the farmer. Some of the leading farm organizations advise that our Congressman has been most helpful in their efforts to secure beneficial legislation. You have probably watched his record carefully. Should the farmers attempt any change in this district?—*H. V., Midland county farmer, Mich.*

It is my judgment that Congressman Currie's record and capabilities are so far superior to those of his opponent that there can be no comparison. I understand that Mr. Currie comes from a family of farmers, and I know from my observation of his record that his interests are primarily with the farmers. On all matters of agricultural importance that I have called to his attention during the last session of the legislature he has rendered most valuable service. I know that he did everything within his power to further the bean tariff bill, but he was helpless so long as another Michigan congressman was sitting on the lid. I approve of the action taken by Congressman Currie during the coal strike. I think it took courage and conviction for him to exhort the coal miners of his own district to return to work until their complaints could be settled by arbitration. We have not yet recovered from the effect of that strike. I can see no reason why the farmers of your district should wish to make any change in their congressman this year.—Editor.

PAROCHIAL SCHOOLS

After reading the article written by J. B. in M. B. F. of July 3rd would like to give my opinion on the parochial school amendment.

I do not believe it would be wise to destroy these schools. They are doing no one any harm as anyone but a narrow-minded person can see, but do, I believe, much good and are a great help to our country.

There are thousands of children attending these parochial schools, and if they are closed, our public schools will have to be made larger or new ones put up to make room for these children, more teachers will have to be hired and Mr. J. B. as well as many others will have more school taxes to pay without receiving any direct benefit from it.

I have taught school myself and have visited both Catholic and Holland schools but could not see any secrecy about them. There are many Protestant children attending the Catholic schools. The children are taught in the English language and our school commissioner visits these schools as well as the public school.

This is a free country where people can worship as they please and if some religion is brought into our schools along with the other work it could never do any one any harm and perhaps we would not see so many of our high school students going away.

We have a good school system and any one would have to prove to me how doing away with the parochial schools could make it any better before I could vote to abolish them.

Let us all work together and forget our differences in religion and make our life worth while. A true Christian will not be prejudiced against some other denomination but can see some good in everything.

Yours for success with the best farm paper published.—*M. E. O., Muskegon County.*

TEXACO MOTOR OIL ★ THUBAN COMPOUND ★ HARVESTER OIL ★ AXLE GREASE

Different motive powers require oils of different composition

TEXACO

TRACTOR OIL

Are you using the same oil in your tractor as you use in your automobile or truck?

Compare the work done: The average auto motor carries a relatively light load with many periods of rest. The tractor motor develops its full-rated power with wide-open throttle the whole day long. Higher explosion temperatures and higher pressures must be dealt with. A heavier and more substantial oil must be used.

TEXACO TRACTOR OIL meets the conditions perfectly. It does the work without excessive thinning down. It burns clean—without excessive carbon deposits. It withstands the greatest pressures. It reduces wear. It means more power.

It comes in 33 and 55 gallon well-built steel drums, wooden barrels and half-barrels, and five-gallon cans. Try it. You'll see a difference right away. You'll find it mighty cheap compared to replacing worn parts or frequent repairing.

"There is a Texaco Lubricant for Every Purpose"

The Farm Home
A Department for the Women

EDITED BY CLARE NORRIS

THE WHOLE country has been shocked by the horrible murder of Mrs. LeRoy while the police everywhere are endeavoring to apprehend the perpetrator of this hideous crime.

And while mothers, anxious to shield their daughters from such horrors might wish that less publicity be given in cases such as these, there is another element which enters into the question of publicity. In the first place, others who might be contemplating crimes, reading of the net which is spread for such offenders, may decide that the risk is too great, and resist their insane impulses. While daughters at the adolescent age, boy-mad, as we often express it, can be made to realize that there is a terrific danger in chance acquaintance with young men. This LeRoy was married before—in fact had never secured a divorce from his first wife, and had the woman who met and married him later known his family and been acquainted with his life's history, the fate which awaited her would have been averted.

Perhaps the daughter may chafe a bit under the chaperoning which her parents give her, but it is the wise parent indeed who can adapt herself to her children's life enough so that she can plan their pleasures that they may be perfectly satisfied with the amusements provided and the people whom they meet in the regular way and with the full knowledge of their parents.

It's a great responsibility which devolves upon a mother—surely there can be no greater anywhere. And that mother who makes her home so attractive that daughter will, of choice, bring her friends home and be glad to introduce them to her family—that mother who can forgo her contemplated evening of reading or sewing and help her daughter plan a pleasant evening—who will provide a dainty little lunch occasionally for the young folks, is doing more than she perhaps realizes to keep her daughter under her eye.

THE UNDERWEIGHT CHILD

THE VITAL problem of the underweight child is engaging the attention of physicians and all interested in children throughout the country. The Bureau of Education at Washington has prepared a table showing the weight a child of certain height and age should be. This has been done after taking thousands of tests and with the assistance of our best experts.

It does not necessarily follow that sickly, but in most cases there is all children who are under weight are something wrong and they need very careful attention as to their habits of eating, sleeping and exercising, that they may grow into healthy, happy energetic boys and girls.

If a child is not hungry and refuses wholesome and nourishing food, it may be due to lack of proper rest and out-door exercise. Play in the open air every day with suitable clothing, even in wet and cold weather, is a great essential. Early to bed habits and a nap or rest during the day is another. Eating sweets between meals should be forbidden. Given these three aids, the delicate child should develop a good appetite and be ready and eager to eat the wholesome foods such as milk, eggs, vegetables, cereals, simple desserts, etc., he must have.

The child who plays or sits in the house, goes to bed late, sleeps in close rooms, eats what he pleases and when he pleases, as a result has no appetite for his meals of nourishing food. As a result of not eating, he lacks vitality, becomes nervous, listless, pale and weak and so will not want to play or work and again will have no appetite. Thus a bad "circle" is established. Thus things get worse and worse until a start is made in the right direction. This start may be accomplished by encouraging out-door play, enforcing early hours, seeing that the sleeping rooms are properly ventilated and that the between meal habit of eating candy and sweets is stopped. Thus a better mode of life is established and the results show a clear-eyed, rosy child, full of vitality and joy.

Weekly Cheer

Smile and the world smiles with you,
"Knock," and you knock alone;
For a cheerful grin
Will let you in
Where the kicker is never known.

JELLY AND JAM MAKING WITH SUGAR SUBSTITUTES

IF YOU have never tried making the more difficult fruits into jellies, it might be well not to begin on them while using sugar substitutes, but use the ones that jelly more readily; e. g., sour apples, currants, raspberries, gooseberries, grapes and oranges. The color and texture is excellent in jelly made with corn syrup alone, but it is best to allow it to remain in a glass for several days after making before serving it.

Directions for Making Jelly With Sugar Substitutes:

Prepare your fruit juice as you do when making jelly with sugar. After it is heated boiling hot, add an equal amount of white corn syrup, (1 cup of juice to 1 cup of syrup, and cook rapidly until the mixture "flakes" or "sheet" off of the spoon. It takes a slightly longer time to reach this stage when using sugar substitutes. Note: When using grapes and currants, 1 1-4c. of corn syrup to 1 cup of fruit juice may be used.

If the jelly is not sweet enough when using all syrup the following proportions may be used:

2 cups of fruit juice.
3-4 cups of sugar.

Note: With currants and grapes, 1 cup of sugar may be used.

Gooseberry Jam

4 cups gooseberries.
1 cup water.
2 cups

Cook gooseberries in water until they burst. Add syrup and continue cooking until the desired consistency is attained Pour into sterilized glasses or jars immediately and seal.

Peach Marmalade

3 cups sliced peaches.
1 cup syrup.

Cook peaches in a small amount of water until they are soft. Add syrup and cook until sufficiently thick. If spices are desired they may be added at the same time as the syrup.

Peach Preserves

Heat 2 cups of corn syrup and a piece of stick cinnamon. Add sliced peaches and cook slowly until fruit is clear and the syrup is of the desired density.

Tomato Preserves

1 lb. tomatoes.
1 lemon.
1 cup corn syrup.
1 piece ginger root.

Slice tomatoes pour syrup over them and allow to stand over night in a cool place. The next morning pour off the juice and heat; add tomatoes, lemon sliced thin, and ginger root. Cook until tomatoes are clear and the syrup thick.

The Children's Hour

DEAR CHILDREN: As we haven't much space this week I am not going to write you a very long letter, but I do want to take up a little space to call your attention to the story just below our letter. I read it a few days ago and it has such a nice moral to it that I want you children to read it. After you have read it write and tell me why we should observe this moral. If you like stories of this kind we will print more of them.—AUNT CLARE.

THE HEN AND THE TURTLE

AND THE Memory-Man said: "In Lze-Cheung, in China, a farmer once caught a Mountain Turtle. It was very big, so that it took two men to carry it home, and the farmer said, 'We will keep him in the yard for good luck, because he is too old to eat.'

"But the little chickens, the busybodies of the farmyard, disliked the scornful way in which the Turtle looked at them and every time they spoke to him, he humbled them. They complained to their mother, the Hen, who came and made a terrible fuss. When she had finished the Turtle said calmly:

"'What does it matter what you say? Soon you will be killed and roasted. And even if you should not be killed for food, what is your life? The whole life of a cackling Hen is as a day to me, a Mountain Turtle. You would do better to learn from me, who has seen many generations of Hens.'

"More is to be learned from the experience of an aged man, if though he be stupid, than from the wit of a young man, even though he be clever.—R. W.

OUR BOYS AND GIRLS

Dear Aunt Clare—This is my first time I have written. I am a boy 12 years of age and am in the sirth grade at school for pets I have a cat and a cow. We take the M. B. F. We all like it. I hope to see my letter in print. William Schulk, Rogers, Mich.

Dear Aunt Clare—This is my first letter. I like to read "The Children's Hour." My daddy takes the M. B. F. He thinks it the only paper. We live on an 120 acre farm. I will close, hoping to see my letter in print. Orvel A. Trowbridge, Manton, Mich.

Dear Aunt Clare—My father takes the M. B. F. and likes it very much. I have three brothers and one sister. For pets I have two rabbits and a dog. I am 9 years old and in the 6th grade. My father is going up north and he is going to get me a gun. I hope to see my letter in print. Davol Binley, Homer, Mich.

Dear Aunt Clare—I am a city girl from Detroit taking a vacation here on the farm with some farm friends. I read "The Children's Hour" and enjoy it very much. I read it last year too. My school was out the 24th of June. I am eleven years old and in the A-7 grade. The name of my school is Northeastern High. I have eight teachers daily to teach me. For pets I have five rabbits and a cat. Cornelia Grike, Grass Lake, Mich.

Dear Aunt Clare—This is the first I have written toyou. I am a girlr 10 years old and am in the 7th grade at school. My teacher's name is Miss Loretta Maloney. We take the M. B. F. and like it very much. I like the Children's page the best. I have eight sisters and six brothers. We have a farm of 400 acres. We have a Ford tractor a Ford truck and a Dort passenger car. We have 380 chickens, 24 cows, 18 sheep, 75 geese, 94 ducks, 14 horses and for pets I have 34 rabbits, 5 cats and 3 dogs. We are going to move to Bay City this fall and I am going to high school and am going to be a teacher. I am going to Alpena for a visit this year. I wish some of the girls would write to me. Leona Tacey, Essexville, Mich., R 1, Box 59.

Dear Aunt Clare—As I have never written to you before I will tell you of my pets. I have 8 cats a jersey calf and a white rabbit. I am twelve years old, am in the 7th grade. My father takes the M. B. F. and finds it very interesting. I am sending you a poem of my own composition. Hoping to see it in print. Doris Baughn Remus, Mich., R. 4.

"Bare Foot Girl'"

Blessings' on thee barefoot girl,
Happy eyes and tangled curls,
Lips of red and eyes of blue,
A barefoot boy who thinks of you.
Helps her father every morn,
Milks the cows and blows the horn,
Picks the berries every day, helps in every other way.
Time has flown, days are past,
Bare foot girl is now a lass,
Golden days now every morn.
Lad a lassie owns the farm
Dad's retired far away,
The farm goes on in a different way.
Success is all that we can say,
That ends the rhyme in a blissfull way.

Dear Aunt Clare—This is the first I have written to you. I am a girl 11 years old and will be in the 8th grade when school starts. We take the M. B. F. and like it fine. I am sending a story that I made up myself. Hoping to see my letter in print. Gertrude Boerner, Mio, Mich.

Bessie and the Billie

Once upon a time there was a girl whose name was Bessie White. She went to school. Mr. Jones was White's neighbor and lived right beside them. When Bessie went to school she always went through Mr. Jones' field as it was shorter. Mr. Jones told her not to go through there as he had a Billy goat in there. One day as Bessie was coming home from school she thought she would go through the field as it was very hot going by the road, so she started. She got a little ways when up sprang Billie goat and started after Bessie. She ran toward a stump as she was going she took off her apron. When she got to the stump she got behind it and held her apron in front of the stump. Billie goat ran right into the stump. After a while Bessie came out from behind the stump and saw Billie lying there very still. She went and told Mr. Jones about it. Billie was only stunned. Bessie never went through the field again.

When We Go Swimmin'

Boy! it's great to shed your oxfords,
And to shake your happy rags,
When the summer sun is boiling in the sky!
And its swell to trim your toe-nails
On the rocks and river snags,
And to bid the blistering bank a brave Good-by.

Fellows, we must hit the by-way
That goes winding in and out,
Wriggling right up to the waters, willow-girt,
That's the highway, lads, that's my way,
That's the road that suits a scout
And bids good-by to troubles, duds and dirt.

How you dive in, how you splash in!
How you dash in, if you dare:
Oh the happy thrill, the pulse-beat, the delight:
How your head does split the water:
How your heels do hit the air:
How you vanish, as by magic, out of sight!

Then you bob up with a shiver
Gently creeping down your spine,
Like a little tiger-kitten hunting game.
Oh, the quiver of the river
When you shiver, ain't it fine,
Don't it make the bloomin' bath-tub blush for shame?

—*C. W. Moorman in May Boy's Life.*

Answer to Last Week's Puzzle

Angling. Tennis. Courting. Croquet.

"FOR SEE, except where your holdings are concerned, the market is reasonable. But take your holdings. There's Frisco Consolidated. There is no sense nor logic that it should be beared this way. Only your holdings are being beared. New York, Vermont and Connecticut paid fifteen per cent the last four quarters and is as solid as Gibraltar. Yet its down, and down hard. The same with Montana Lode, Death Valley Copper, Imperial Tungsten, Northwestern Electric. Take Alaska Trodwell—as solid as the everlasting rock. The movement against it started only yesterday late. It closed eight points down and today has slumped twice as much more. Every one, stock in which you are heavily interested. And no other stocks involved. The rest of the market is firm."

Bascom shrugged his shoulders despairingly.

"Are you sure you cannot think of somebody who is doing this and who may be your enemy?"

"Not for the life of me, Bascom. Can't think of a soul. I haven't made any enemies, because since my father died, I have not been active. Tampico Petroleum is the only thing I ever got busy with and even now it's all right." He strolled over to the ticker. "There. Half a point up for five hundred shares."

"Just the same, somebody's after you," Bascom assured him. "The thing is clear as the sun at midday. I have been going over the reports of the different stocks at issue. They are colored, artfully and delicately colored, and the coloring matter is pessimistic and official. Why did Northwestern Electric pass its dividend? Why did they put that black eye stuff into Mulhaney's report on Montana Lode? Oh, never mind the rest of the black-eyeing, but why all this activity of unloading? It's clear. There's a raid. It's been slowly and steadily growing. And it's ripe to break at the first rumor of war, at a big strike, or financial panic—at anything that will bear the entire market.

"Look at the situation you're in now, when all holdings except your own are normal. I've covered your margins, and covered them. A grave proportion of your straight collateral is already up. And your margins keep on shrinking. You can scarcely throw them overboard. It might start a break. It's too ticklish."

"There's Tampico Petroleum, smiling as pretty as you please—it's collateral enough to cover anything," Francis suggested. "Though I've been chary of touching it," he amended.

Bascom shook his head.

"There's the Mexican revolution, and our own spineless administration. If we involved Tampico Petroleum and anything serious should break down there, you'd be finished, cleaned out, broke.

"And yet," Bascom resumed, "I see no other way out than to use Tampico Petroleum. You see, I have almost exhausted what you have placed in my hands. And this is no whirlwind raid. It's slow and steady as an advancing glacier. I've only handled the market for you all these years, and this is the first tight place we've got into. Now your general business affairs? Collins has the handling and knows. You must know. What securities can you let me have? Now? And tomorrow? And next week? And the next three weeks?"

"How much do you want?" Francis questioned back.

"A million before closing time today." Bascom pointed eloquently at the ticker. "At least twenty million more in the next three weeks, if—and mark you that if well—if the world remains at peace, and if the general market remains as normal as it has been for the past six months."

Francis stood up with decision and reached for his hat.

"Im going to Collins at once. He knows far more about my outside business than I know myself. I shall have at least the million in your hands before closing time, and I've a shrewd suspicion that I'll cover the rest during the next several weeks."

"Remember," Bascom warned him as the shook hands, "it's the very slowness of this raid that is ominous. It's directed against you, and it's no fly-by-night affair. Whoever is making it, is doing it big, and must be big."

Several times, late that afternoon and evening the Queen was called up by the slave of the flying speech and enabled to talk with her husband. To her delight, in her own room, by her bedside, she found a telephone, through which, by calling up Collins' office, she gave her good night to Francis. Also, she essayed to kiss her heart to him, and received back, queer and vague sound, his answering kiss.

She knew not how long she had slept, when she awoke. Not moving, through her half-open eyes she saw Francis peer into the room and across to her. When he had gone softly away, she leapt out of bed and ran to the door in time to see him start down the staircase.

More trouble with the great god Business—was her surmise. He was going down to that wonderful room, the library to read more of the dread god's threats and warnings that were so mysteriously made to take form of written speech to the clicking of the ticker. She looked at herself in the mirror, adjusted her hair, and with a little love smile of anticipation on her lips put on a dressing gown—another of the marvelous pretties of Francis' forethought and providing.

"Hearts of Three"

By JACK LONDON

Author of the "Valley of the Moon," and other stories.

At the entrance of the library she paused, hearing the voice of another than Francis. At first thought she decided it was the flying speech but immediately afterward she knew it to be too loud and near and different. Peeping in, she saw two men drawn up in big leather chairs near to each other and facing. Francis tired of face from the day's exertions still wore his business suit; but the other was clad in evening dress. And she heard him call her husband "Francis," who in turn, called him "Johnny." That, and the familiarity of their conversation, conveyed to her that they were old, close friends.

"And don't tell me, Francis," the other was saying, "that you've frivoled through Panama all this while without losing your heart to the senoritas a dozen times."

"Only once," Francis replied, after a pause, in which the Queen noted that he gazed steadily at his friend.

"Further," he went on, after another pause, "I really lost my heart—but not my head. Johnny Pathmore, O Johnny Pathmore, you are a mere flirtatious brute, but I tell you that you've lots to learn. I tell you that in Panama I found the most wonderful woman in the world—a woman that I was glad I had lived to know, a woman that I would gladly die for; a woman of fire, of passion, of sweetness, of nobility, a very queen of women."

And the Queen, listening and looking upon the intense exaltation of his face, smiled with proud fondness and certitude to herself, for had she not won a husband who remained a lover?

"And did the lady, er—ah—did she reciprocate?" Johnny Pathmore ventured

The Queen saw Francis nod as he solemnly replied.

"She loves me as I love her—this I know in all absoluteness." He stood up suddenly. "Wait. I will show her to you."

And as he started toward the door the Queen in roguishness of a very extreme happiness at her husband's confession she had overheard, fled tripplingly to hide in the wide doorway of a grand room which the maid had informed her was the drawing room, whatever such room might be. Deliciously imaging Francis' surprise at not finding her in bed, she watch him go up the wide marble staircase. In a few moments he descended. With a slight chill at the heart she observed that he betrayed no perturbation at not having found her. In his hand he carried a scroll or roll of thin, white cardboard. Looking neither to right nor left he re-entered the library.

Peeping in, she saw him unroll the scroll, present it before Johnny Pathmore's eyes, and heard him say:

"Judge for yourself. There she is."

"But why be so funeral about it, old man?" Johnny Pathmore queried after a prolonged examination of the photograph.

"Because we met too late. I was compelled to marry another. And I left her forever, just before she was

THE SIGN OF ROWENA QUALITY

There's Economy and Satisfaction in Quality Flour

and there is a far greater difference in flour than is generally realized. LILY WHITE is real economy because it costs only a little more than ordinary flours. Baking results are incomparably better when this famous high-grade flour is used.

Lily White

"The Flour the Best Cooks Use"

Look for the ROWENA trade-mark on the sack

is made from the hearts of the finest wheat grown in America. It is milled with extraordinary skill and care to produce a flour of perfect balance, of excellent volume, of unsurpassed color. No wheat is so thoroughly cleaned, scoured and washed before being milled.

You see the results in the bread, rolls, biscuits and pastry baked from LILY WHITE—they are good looking, light, tender, of appetizing flavor and highly nutritious.

Because we know that LILY WHITE is the finest quality that choicest raw materials and conscientious milling make possible, we guarantee it. It must give perfect satisfaction or the price paid for it will be refunded.

The woman who bakes for the family can give them a treat if she uses this superfine flour. Ask for it at your dealer's.

MARKET FLASHES

TRADE AND MARKET REVIEW

The question on the public's mind today is, "How will the increase in freight rates effect prices of commodities?" It is the opinion of the writer that these new rates, which I understand are to go into effect the latter part of this month, will not make much of an impression on the future trend of prices, for a time at least, owing to the fact that, prices are attempting to get back to pre-war level as consumers will not buy only what is absolutely necessary at their present level. Prices have receded rapidly the past few months but the consumer feels they are still too high. The costs of transportation is but a small item when it comes to fixing the market price of an article. Practically the entire thing rests on supply and demand; if the demand is large and the supply is scarce the price advances, and if there is huge supply with but little demand the price declines and the transportation costs is but an iota in either case when deciding the price. Of course, I do not believe that prices will descend to quite as low as they would have if the increase had not been granted, but as I said before, how much they will decline depends on the supply and demand.

According to press dispatches, the Interstate Commerce Commission is going to demand better service in payment for the grant to increase freight rates. One of the members of the Commission is quoted as saying: "If the railroads do not make good now something else must be attempted, the Plumb plan or some form of government ownership."

Drastic fluctuation was featured by the grain markets during the current week. The week began with prices very weak and going downward rapidly, then news of war was received from Europe and dealers who were selling freely stopped selling and began buying everything in sight with the result that prices advanced sharply. Grain prices are higher on all markets than they were last week but markets are weak. Dealers, after investigating early reports, are less inclined to take the war news seriously and are offering to sell. Markets will fluctuate for some time. It has always happened when markets were making a big change. Take for instance before the war, when prices were headed skyward, they did not advance continually, but every once in a while they declined for a few days, then turned and advanced again. The markets are shaky when making such a change and reports, which ordinarily would not be noticed, cause them to fluctuate.

Crops in general are reported in good condition. Winter wheat is yielding satisfactorily. Farmers are also getting excellent yields from their oat and rye crops. Corn in some sections has been suffering from dry weather but rains have been reported in these sections the past few days.

LAST MINUTE WIRES

DETROIT—Grains weak and lower prices expected. Beans inactive. Hay in good demand. Cattle market demoralized, and hogs dull.

CHICAGO—Less war-like news causes grains to slump. Hog market dull. Cattle slightly higher. Beans steady.

(Note: The above summarized wires are received AFTER the balance of the market page is set in type. They contain last minute information up to within one-half hour of going to press.—Editor.

WAR NEWS FORCE WHEAT UP

WHEAT PRICES PER BU., AUG. 10, 1920			
Grade	Detroit	Chicago	N. Y.
No. 2 Red	2.42	2.47½	2.50
No. 2 White	2.40	2.47	2.60
No. 2 Mixed	2.40		2.75
PRICES ONE YEAR AGO			
Grade	Detroit	Chicago	N. Y.
No. 2 Red	2.23½	2.33½	2.34
No. 2 White	2.21½		
No. 2 Mixed	2.21½		

The wheat market of the past week was one of rapid fluctuation. It began the week by declining, then war news came from Europe and the market rapidly changed and started upward, but the market is nearly at a standstill right now as dealers have had time to give the European war news serious thought and most of them fully believe that there will be little if any fighting because they think Russia will stop before France or England can swing their fighting forces into line. Feeling of this kind will soon weaken the market. Reports of the large carry-over from the 1919 crop and favorable news from the states that are threshing also help to give the market a bearish look. It is estimated that the United States has a carry-over of 109 million bushels, and it has been estimated that the present crop will be about 840 million bushels. This brings the total of number of bushels available this fall to over 950 million. The damage to spring wheat has been more than offset by the increased yields in Kansas, Nebraska and Oklahoma. We believe the market will continue to decline, not without sudden turns and sharp advances however, because the market is going to fluctuate, and will continue to fluctuate when the market is passing through such a period as it is now. Our opinion is that you will see considerable lower prices before 1921.

CORN HIGHER BUT MARKET SHOWS WEAKNESS

CORN PRICES PER BU., AUG. 10. 1920			
Grade	Detroit	Chicago	N. Y.
No. 2 Yellow	1.62	1.58¼	1.72¼
No. 3 Yellow			
No. 4 Yellow			
PRICES ONE YEAR AGO			
Grade	Detroit	Chicago	N. Y.

No. 3 Yellow	2.01	1.94	2.07
No. 4 Yellow	1.98		

News of the growing crop in need of rain in several states and the war news switched the trend of corn prices and caused this course grain to advance along with wheat. Millers were also in the market a few days to help boost prices. The market is weaker at present owing to the discounting of the war news and to recent rains in the districts where it was needed most, and, we believe, lower prices will be in style. Reports of the growing crop show prospects rather poor in the East and reports of damage to the crop by worms continue to come from the West, but not as much as usual, and the prospects in general are for a good crop.

OATS ADVANCE

Oats did not advance very much when compared to wheat but oats are nearing a pre-war level and the market is in a firmer condition. We do not look for oat prices to decline as fast as wheat and corn from now on. Threshing returns give the crop to be turning out better than was expected and one grain trade paper estimates the 1920 yield at around 1,375,000,000 bushels. A report from the East stated that England was asking for offers on oats, otherwise nothing has been reported regarding export trade in the new grain. The grain is being offered freely and the shortage of cars is the only thing that keeps a greater supply from the markets. The railroads are catching up on their orders and expect to soon have more cars available for grain.

OAT PRICES PER BU., AUGUST 10. 1920			
Grade	Detroit	Chicago	N. Y.

Standard	.79	.76	.80
No. 3 White	.78	.75	
No. 4 White	.77	.74	

RYE FOLLOWS OTHER GRAINS

Rye, owing to the same news that affected other grains advanced 20c on the Detroit market and is quoted at $1.90 for No. 2. Declines are expected to be reported shortly as this grain does not retain strength owing to the fact that export buying was what made the price, and there is no export demand now. Rye is turning out better in Europe than was expected and it is a question as to whether rye will be as popular here in this country again this coming winter and next spring as it was last winter and spring.

BEANS DECLINE AGAIN

BEAN PRICES PER CWT., AUG. 10, 1920			
Grade	Detroit	Chicago	N. Y.

Grade	Detroit	Chicago	N. Y.
C. H. P.	8.25		
Prime			
Red Kidneys			

We are sorry to say this, but we have more declines to report in the bean market. This time the entire drop amounts to 35c. It is the kotenashis bean that is spoiling the market for the navy bean. These beans are selling for 5c a pound. It is reported that there is a considerable smaller acreage of these kotenashis beans planted this year. Let us hope so. Maybe the white navy bean will come into its own and sell at a price that will net the farmer a profit. We have predicted that the price of beans would take a turn, and I presume you farmers think we are crazy or something like that because we have predicted this in the face of declines. Well, we are still predicting higher prices, and we fully believe they are bound to come. We are basing our predictions, not only on our own convictions but on the opinions of some of America's foremost market experts. The crop throughout the country is reported in fine condition and prospects for a big yield are good.

LIVESTOCK MARKET
(By H. H. Mack)

There never was a time before in the past history of this country, when the farmer feeder of live stock was so completely at a loss to know what to do. Uncertainty and lack of confidence in the future prosperity of the country as a whole are quite general, just now, among all classes of men but they are gripping the farmer to so great an extent that he is almost ready to give up the battle. The farmer is losing faith in the entire market proposition, a condition which is not surprising when we remember the hard knocks which he has had during the last 18 months. The recent wild fluctuations in the grain market, the ups and downs of the hog market and the "downs" of the sheep and cattle markets, during the last six months, have just about brought him to the conclusion that he will give up feeding live stock, entirely, until market demand becomes more reliable and selling prices a little nearer to the cost of production. The attitude of the feeder is reflected in current market quotations for feeding stock of all kinds, quotations for feeding cattle, stockers, feeding lambs and wethers being at the season's extreme low point in all markets.

Chicago had a bad week in cattle, all kinds showing a sharp decline, during the early part of the period, but regaining a part of the loss before the week ended. Western states are gathering grass cattle in large numbers, these days and increasing receipts of this grade of cattle mean lower prices all along the line. There is yet no grass cattle coming that will take the place of corn fed stock but the Montana run of grassers is not far away; grassers from the last mentioned state usually carry more and better flesh than the "half and half" kind which the east and middle west are sending forward at this time and labeling them dry-fed.

Detroit got a moderate run of cattle to begin the week with and the trade was about the worst of the season; local killers are well-supplied with cattle from the southwest and there is little hope for an improvement in cattle values until Michigan cattle begin to come with better average quality to recommend them. The calf market had an easier tone on Monday in Detroit than that which ruled on the close of last week, prices were about steady for the top grades but it was noticeable that only a few extra good calves brought $19 per cwt. A fairly active demand for milch cows and springers is noted but there is practically no demand for anything of common and cull quality, so they are sold as canners.

The sheep and lamb trade has been working, steadily, to a lower basis during the past week under remarkably large receipts; shippers are loathe to send their stock forward to be sacrificed but they dare not let the opportunity to get cars pass for they do not know when another chance will present itself. Eastern textile interests are busy sending out literature setting forth facts which tend to prove that the world's supply of wool is excessive; this "dope" is, of course, sent exclusively to wool growers. The general public is being furnished an abundance of data from the same source which tends to prove that it will be impossible for clothing to be sold any lower than the present scale of prices. Every man, who falls for such piffle, deserves all he gets. While the outlook for the sheep-growing industry is far from encouraging the writer is of the opinion that lamb feeders, who improve the present opportunity to purchase a supply of likely western lambs, will make a better profit on the feeding venture than they have made for a long time. The Detroit sheep and lamb trade was very dull and slow on Monday with the best lambs on sale going at $13 to $13.50 per cwt.; the average quality of local arrivals was very common.

The market for live hogs faces a set of badly mixed conditions and it would seem that influences must be about evenly balanced for price changes during the past week have been slight. Buyers for shipping purposes have set the pace, of late, but packers have shown less disposition to pound values, the influence being that they are not adverse to an advance in both commodity and live hogs at this time. Hog receipts have been light of late all around the market circle and the quality of the offerings has been about the poorest of the season. War talk tends to harden values but this is amply offset by a declining foreign exchange. The exportation of hog products is increasing from week to week; on the other hand, the supply of lard and cured meats of all kinds was hardly ever before known to be as large as at the present time. The writer is looking for a decrease in current receipts of hogs during the next 30 days and gradually hardening values.

BEET GROWERS RENEW EFFORTS FOR RECOGNITION

(Continued from page 3)

at the current market quotations and clean up a few extra million? No, the government probably won't let them get away with any such profits as that. The government would have a right to assume that farmers producing beets at a guaranteed price of $10 per ton are satisfied with that figure, and it would be entirely justified in fixing the wholesale price of sugar at 10 cents. We do not say that these things will come about, but we suspect they will.

For these reasons it is important that the growers do not sign a contract for 1921 which does not guarantee a larger minimum than $10. The market price of sugar, if permitted to be regulated by the world supply and demand, will probably not return to normal for a period of years. If farmers will grow beets at $10 per ton, the consumer who buys beet sugar should not be asked to pay more than 13 or 14 cents per pound. If the farmer finds that he must have $14 per ton in order to pay him cost of production, protect him from risk and yield him a fair profit, the government would certainly never order him to produce them for less. So it is going to be up to the farmer to raise his minimum high enough to protect himself when Uncle Sam steps in. And that is the big reason why the sugar beet growers,—every man who intends to grow beets another year,—should join the Growers' Ass'n and work in harmony for a contract that will protect them in the face of such exigencies.

HOW SHALL WE FIGHT THE GRASSHOPPER PLAGUE?

(Continued from page 4)

cites his own losses to prove it. He concludes, "If you could help us in securing legislation compelling everyone to use some means to prevent another year of this plague, we, the farmers would be very grateful to you."

E. P. P., of Mancelona does not believe that the 1920 crop of hoppers should get all the blame for the damage to meadows. "The grasshoppers did not do it all in one year," he argues. "Two years ago I cut 12 acres of timothy and clover and the grasshoppers together with the dry weather never let it start again." Mr. P. thinks we should have a grasshopper law similar to the noxious weed law and men to enforce the law against the lumber owners and others who try to avoid it.

J. D. R., of Mancelona, lost four acres of Sudan grass, five acres of soy beans and five acres of millet. He asserts that the damage has been fully as great as claimed, yet he has no desire to sell his farm for, he says, "We can raise most anything just as good as in the southern part of Michigan, if we could get rid of the grasshoppers." He invites the editor to come to Antrim county and inspect the damage done with his own eyes, which the editor hereby promises to do.

MR. EDWARD F. DOLD

A seasoned business expert and qualified packing house executive.

Born a son of Jacob Dold of Buffalo—one of the four most prominent meat packers of America—he has had exceptional opportunities for acquiring a full, thorough and practical knowledge of the Packing Business in all its ramifications, with the result that today he is an authority on packing house practice and one of the best known men in the business with a wide acquaintance in the trade, his duties having been manifold and bringing him in direct contact with all phases of the industry. As a young man he entered his father's plant on an equal footing with other employees, served his time in the "hog gang," the "beef gang," the "cellar gang," tankhouse, etc., and in line with his father's policy as concerned all his sons, Edward Dold had to qualify as top man in each gang before transfer to another department. After spending some fifteen years in the plant, during the last five years of which he was General Superintendent of The Jacob Dold Packing Company at that time operating three plants located respectively at Buffalo, N. Y., Kansas City, Mo., and Wichita, Kan. Mr. Dold assumed duties taking him outside the plant but not lessening his responsibilities. As Manager of Sales and Secretary and Treasurer his was a large part in the building up of the mammoth business, the success of which has been in excess of any in the field. The matter of handling, processing and adequately marketing by-products of the packing business has been the pet hobby of Mr. Dold, who looks with favor on the dollar saved as compared with the one earned.

His will be the dominating influence in further developing and operating our business and we are indeed justified in our satisfaction resulting in our securing the active services of Mr. Dold to this end.

ADDRESS ALL MAIL TO THE FIRM

Dold

Buffalo, N.Y.

June 2nd., 1920.

Mr. Joseph Garduleski, Sec & Treas.
Detroit Packing Company,
Detroit, Michigan.

Dear Sir:-

In answer to your recent communication wish to state that I have given your matter considerable consideration. After looking over the site of the new Detroit Packing Plant, I am favorably impressed by its location. It can be made into an ideal and economical Packing plant, having ample switching facilities and nearby to local Stock Yards, besides being located within the great City of Detroit with its growing population constituting a great army of consumers of Packing House meat products.

It would seem to me a very good proposition to organize and build at once a large Packing Plant in your City.

I firmly believe that your Company financed along the lines that you have outlined, also economical and up to date methods of handling and marketing products, coupled with proper management, will be a great success from the Stockholder's point of view.

After careful and due deliberation , I have decided to accept your offer of General Manager, also the Presidency of this Company, if so elected by your Board of Directors. I also will make a substantial investment in the Company, which is evidence of my faith in this proposition, besides being an investment adequate with the dignity of the position herein above mentioned. If elected to the Presidency of the Detroit Packing Co., I wish to assure you and our stockholders of the best service that I am capable, and will bring to your Company my life-time's practical Packing House experience, comprising many years of constant activity in all branches of this great Packing Industry.

Yours respectfully,

Edward F. Dold

RIGHT OF WAY

In touring through the country in coming to a four corners, a car coming from the east going west and one coming from the south going north collided, which one should have the right of way? And who's fault was it? There being a fine mist preventing the drivers seeing each other. In driving cattle to market two of them jump over the fence into some crops. They were in there a half an hour. Could the party collect damages?—A Reader.

I am of the opinion that neither car has "a right of way." Cities and villages have usually adopted ordinances providing for "right of way." I am not aware of any such statute covering the state at large. It may be that each was equally at fault but there are some well known rules that courts would apply in determining whose fault it was. The law provides "Upon approaching an intersecting highway, a bridge, dam, sharp curve or steep descent, and also in traversing such intersecting highways, bridge, dam, curve or descent, a person operating a motor vehicle shall have it under control and operate it at such speed as is reasonable and proper, having regard to the traffic then on such highway and the safety of the public." It is possible that if one of the parties observed this regulation of the statute and the other did not the one who did not observe these regulations would be to blame and liable for the damage. If each was equally careless and the carelessness was caused by the mist it may be one of those accidents that no one would be to blame for and no one be liable for the damage. The person injured would be entitled to collect damages from the owner of the trespassing cattle and may collect the same by suit or by distraining the animals.—*W. E. Brown, legal editor.*

REMOVING MARL FROM LAKE

We have a great quantity of marl in Cedar Lake but it is covered with water from 2 to 10 feet deep. Some of the farmers want to get this marl for our land, but don't know how to get it out. Can will have to get to get the marl on shore with? The marl lies on one side of the lake but is out from shore about 10 rods. —E. S. B. Lawton, Mich.

I would say that for the conditions described, I think a drag-line bucket would be the most suitable. This device consists of a cable suspended above the lake by being attached to either a pole or derrick on either side of the marl bed. A steel bucket or scoop is attached to a pulley which travels along this cable. The scoop is fitted with additional pulleys and cable so that it can be lowered into the lake and dragged a sufficient distance through the marl bed to become loaded and then raised above the water and brought to shore. The power used is a gasoline engine and a double drum hoist for operating the cables. This is usually located on the bank of the lake near the derrick.—*O. E. Roby, acting head, Dept. of Farm Mechanics, M. A. C.*

PRIMARY LAW

I would like to get the right meaning in regard to the primary law as it now stands. I find a different opinion expressed by different persons in regards to this part of the law. If I am enrolled as a Democrat can I call for a Republican ballot at the primary election without first enrolling as a Republican. Some say I can some say not. Now which is right? Is there not some certain day or days where a person can register or change his enrollment from one party to some other party? Is it the case if I call for a primary ballot of some other party than the one I am enrolled in do I become enrolled in that party? Some say yes, some no. Which is right?—J. F., Beaverton, Mich.

The law does not require a party registration and a duly qualified and registered voter may call for whatever ballot he desires at the primary election.—*W. A. Brown, legal editor.*

PERSONAL PROPERTY

In case of a mother with a family being left on a farm. What part of the personal property is she entitled to lawfully. Does money deposited include personal property.—A Subscriber Bellevue, Mich.

Money in the bank is personal property. The widow is entitled to her own wearing apparel, the wearing apparel of her husband, the household furniture and other personal property amounting to $200. She is entitled to an allowance from the personal property for her support during a year from the date of death of such an amount per week as the judge of probate may deem to be proper in view of all the circumstances. If there is any personal property left after paying these amounts, after paying the debts and expenses of administration and it does not exceed $150 then it may be also assigned to the widow. If there is other personal after the said payments it is to be divided one third to the widow and two thirds divided equally among all of the children.—*W. E. Brown, legal editor.*

ROAD IMPROVEMENT

I would like a little information on road improvement. We live on a road in Blumfield Twp., Saginaw County, 11 miles S. E. of Bay City, known as the Tuscola Road. Bay County has the road stoned to the county line. Saginaw Co. has it stoned 2 miles from Bay Co. line, having a 2 mile gap of clay road in between. We farmers on said road got a petition to improve the road two years ago and paid to have it put on record. Our county road commissioner said as soon as our turn came our road would be stoned. But they are stoning other roads with later petitions and paying no attention to our road.—A. G., Reese, Mich.

The inquiry does not disclose what law is in force in Saginaw nor under what statute the petition to improve the highway was drawn. Saginaw is a county of over 85,000 population but I am not informed as to whether Saginaw County has voted to come under Act 305 of the Public Acts, or whether there is some other act or amendment in force under which action was attempted. This question is so peculiarly a local one that they should inquire of the County Road Commission for particulars why this road was not built. I believe you will get full information. I am unable to answer the question on the information that is given.—*W. E. Brown, legal editor.*

COLLECTION BOX

FURNITURE COMPLAINT ADJUSTED PROMPTLY

"I want to know if the Hartman Furniture Co., of Chicago is a reliable Co., as I ordered a living room set on the 6th day of April. Not hearing from them by the last of May I wrote them to return my money which was one dollar with order. Please let me know through your excellent paper."—*Mrs. W. L., Manistee, Mich., June 30th.*

Immediately upon receipt of this complaint the Hartmann Co., wrote our subscriber a courteous letter of apology, explaining that the shipment had been promptly made and showing that the delay was the fault of the railroad company. They offered to accept a return of the furniture if our subscriber desired her money refunded.

"Since writing in regards to the Hartmann Furniture Co., I have received notice that the furniture is on the way and thanking you kindly for your willingness to help me."—*Mrs. W. H .L., July 7th.*

COMPLAINT AGAINST BEDELL CO.

I sent a long time ago to the Bedell Company for a pair of slippers at $3.98 and they sent me a pair of canvas slippers at $2.48 and I sent them back and I have written to them but cannot get any answer at all. I either want the money or slippers, so please do the best you can and thank you.—*Mrs. M. L., Chesaning, Mich., July 11th.*

This complaint was referred to the Bedell Co., and one week later Mrs. L. received her slippers according to her following letter:

"As I received my slippers I am sincerely thankful to you and hope I can do you a favor in the future."
—*Mrs. M. L., July 17, 1920.*

HIGHWAY OVERSEER'S PAY

I would like to get a little advice in regard to drawing pay for work as overseer on the highway. Can they make me wait until fall and let my money lay idle? their pay right away? Have I got to go and hire money and pay interest and wait until fall and let my money lie idle? Please give what instructions there are about it.—E. J. M., Stanwood, Mich.

I do not know of any provision of the law that requires your compensation to be paid only in the fall. The law provides that the highway commissioner and overseer of highways shall be entitled to such compensation as the township board shall decide. The Commissioner of highways shall be paid from the general fund in the same manner as other township officers are paid. The compensation of the overseer of highways shall be paid from the road repair fund on approval of the township board. Of course they could not order money paid from a fund that had none, but if there was money in the fund it could be ordered paid to you at such time as you had earned it. You are subject to such order as the board makes as to payment and if not satisfactory your only remedy is to quit. —*W. E. Brown, legal editor.*

KILLING QUACK GRASS

The best way I know of to destroy quack grass is as follows: I take a 72 tooth harrow and turn the teeth to about an angle of 45 degrees. Then I hitch my evener on the rear end of the harrow and haul it across the field backwards. This will raise the roots of the grass to the top of the ground and if you will drag them over every day or two for a week they will soon die. Of course the harrow will be liable to try to bury itself when pulled this way, but by fastening two board strips under the harrow or drag to the frame with wire you can keep it on top of the ground alright.

I generally work my bean ground up this way in dry and hot weather. Beans are a good crop to put on land that has quack grass on it because the beans come up quick and you can cultivate the ground and keep the roots stirred up. I got rid of a number of patches last year in this way. —*J. W. H., Millington, Mich.*

RESOLD POTATOES

About the first week in April a stranger came here buying potatoes and contracted for mine making a small payment down, with the understanding that they were to be shipped the next week (he furnished sacks to put them in). It run along about three weeks and he did not call for them. They were sprouting and shrinking so I sold and shipped them to another man and returned him check for amount he gave me as payment on them, which check he refused to accept and returned to me, threatening to sue for damages. Can he collect damages? —F. M., Bentley, Mich.

I am of the opinion that you should have notified him of your intention to resell the potatoes if he did not take and pay for them at the time you understood he was to take them. A part payment would "bind the bargain" and he would be liable to you for the purchase price even though they sprouted. I am of the opinion that unless there are some additional circumstances he would be entitled to damages.—*W. E. Brown, legal editor.*

PAYING TUITION

Has the school district any right to object to pay tuition to high school on scholars if they do not attend only part of the time and we still have to pay tuition in full. I have a man who owes me the sum of $85, without any note, or security at all. I have asked him several times for it. He finally told me to come and get two pigs valued at $25 that was applied on the amount he owed me. Now he refuses to pay the rest. Is there any way to collect the balance, he has 70 acres of land partly paid for. Will you please tel me what chance I have to collect the balance. Hoping to hear from you soon.—P. J., Montcalm County.

(1) If pupils enroll and attend part of the time I am of the opinion that the district is liable for the full amount of the tuition. (2) He is liable to you for the balance of the debt and a judgment for the amount may be collected from any of his property not exempt from taxation. —*W. E. Brown, legal editor.*

Genuine Aspirin

Name "Bayer" means genuine
Say "Bayer"—Insist!

BAYER

Say "Bayer" when buying Aspirin. Then you are sure of getting true "Bayer Tablets of Aspirin"—genuine Aspirin proved safe by millions and prescribed by physicians for over twenty years. SPACE FOR EXHIBITS AT WEST MICH. STATE FAIR NEARLY ALL TAKEN

"Michigan first," is the motto of the management of the West Michigan State Fair in assigning space for the annual exposition scheduled for Sept. 20-24. Application for space from exhibitors from adjoining states are coming in greater numbers than ever before and the management of the West Michigan State Fair is sending out warnings to state exhibitors that if they wish to have the preferred positions again this year they had better make reservations at once.

All indications point to the largest agricultural fair ever staged in the state. Applications for nearly every available foot of space in the Art Hall, Agricultural Buildings, Livestock buildings and the main fair grounds are now on file and new sections will have to be laid out for the overflow. If Michigan exhibitors wish to secure the preferred locations they had better hurry, for the fair management will soon have to assign space to the out of the state exhibitors.

"HEARTS OF THREE"

(*Continued from page 9*)

to marry another, which marriage had been compelled before either of us ever knew the other existed. And the woman I married, please know, is a good and splendid woman. She will have my devotion forever. Unfortunately, she will never posess my heart."

In a great instant of revulsion, the entire truth came to the Queen. Clutching at her heart with clasped hands, she nearly fainted of the vertigo that assailed her. Although they still talked inside the library, she heard no further word of their utterance as she strove with slow success to draw herself together. Finally, with indrawn shoulders, a little forlorn sort of a ghost of the resplendent woman and wife she had been but a minutes before, she staggered across the hall and slowly, as if in a nightmare wherein speed never resides, dragged herself upstairs. In her room, she lost all control. Francis ring was torn from her finger and stamped upon. Her boudoir cap and her turtle-shell hairpins joined the general havoc under her feet. Convulsed, shuddering, muttering to herself in her extremity, she threw herself upon her bed and only managed, in an ecstasy of anguish, to remain perfectly quiet when Francis peeped in on his way to bed.

An hour, that seemed a thousand centuries, she gave him to go to sleep Then she arose, took in hand the crude jeweled dagger which had been hers in the Valley of the Lost Souls, and softly tiptoed into his room. There on the dresser it was, the large photograph of Leoncia. In thorough indecision, clutching the dagger until the cramp of her palm and fingers hurt her, she debated between her husband and Leoncia. Once, beside his bed, her hand raised to strike, an effusion of tears into her dry eyes obscured her seeing so that her dagger hand dropped as she sobbed auditbly.

Stiffening herself with changed resolve, she crossed over to the dresser. A pad and pencil lying handy, caught her attention. She scribbled two words, tore off the sheet, and placed it upon the face of Leoncia as it lay flat and upturned on the surface of polished wood. Next, with an unerring drive of the dagger, she pinned the note between the pictured semblance of Leoncia's eyes, so that the point of the blade penetrated the wood and left the haft quivering and upright.

(*Continued next week*)

HIS HEARING RESTORED

The invisible antiseptic ear drum invented by Mr. A. O. Leonard, which is in reality a minature megaphone, fitting inside the ear and entirely out of sight is restoring the hearing of literally hundreds of people in New York City. Mr. Leonard invented this remarkable drum to relieve himself of deafness and head noises, and it does this so successfully that no one could tell that he is a deaf man. This ear drum is effective when deafness is caused by catarrh or by perforated, partially or wholly destroyed natural drums. A request for information addressed to A. O. Leonard, Suite 81 70 Fifth Avenue New York, will be given a prompt reply.—Adv.

Feed Every 3rd Hog FREE

Save feed and get your hogs ready for market in less time. Prove at our risk that you can save fully one third your feed, making it possible to feed every third hog free by feeding

Milkoline At 2c a Gallon

Milkoline has a base of pasteurized and sterilized, modified Buttermilk. It is guaranteed not to contain any sulphuric acid or anything of an injurious nature to hogs or poultry.

Aids Digestion: Thousands of the most successful hog raisers from New York to California during the past seven years have proved that Milkoline helps and assists digestion, tending to insure perfect assimilation of feed. It helps tone up the system so that hogs are less subject to disease, and practically insures gains of 2½ pounds per head per day.

University Tested Professor W. B. Combs while Ass't. Prof. of Dairy Husbandry at Missouri University conducted a scientific test on Milkoline and found that Milkoline fed hogs put on more weight and showed 82.67% more profit than hogs not fed Milkoline. W. H. Graham a successful feeder of Middletown, Mo., said $30 worth of Milkoline made him an extra profit of $420. Lee Jackson of Wappingers Falls, N. Y., says Milkoline fixed up a bunch of shoats in fine style and is great for brood sows.

Can't Spoil: Milkoline is guaranteed not to rot, sour or mould. It will keep indefinitely in any climate. Flies do not come near it. It is always uniform, and is guaranteed to make you money or it doesn't cost you anything.

2c a Gallon Milkoline comes in condensed form, and you do the diluting on your own farm. When fed as directed Milkoline mixture (one part Milkoline to 60 parts water or swill) costs only 2c a gallon. Full feeding directions free. It is shipped in convenient kegs and barrels which we supply free. The prices are as follows: 5 gal. $7.50; 10 gal. $12.50; 15 gal. $16.50; 82 gal. $32.00; 55 gal. $19.50. It pays to buy in barrel lots because you save 60c a gal. over the 5 gal. quantities.

30 - Day Guaranteed Trial. You are safe in ordering any quantity of Milkoline today. Feed one half the shipment to your hogs and poultry in a thirty day test, then if you aren't entirely satisfied return the unused part to us at our expense and we'll immediately refund every cent you paid us. We are so confident that you will find Milkoline the best money maker on the farm that the S. W. Boulevard Bank of Kansas City substantiates this offer. You are the sole judge. Send money order, or check, to us or our nearest dealer and we will ship immediately. Our booklet, "How to Hustle Heavy Hogs to Market" will be sent free on request—your name on a card will do.

CATTLE

HOLSTEIN-FRIESIAN

How a Purebred Holstein Bull will Make Money for You

The Iowa Experiment Station recently conducted an experiment under the direction of Prof. L. S. Gillette. A purebred Holstein bull was mated to scrub cows and the resulting heifers were bred to another purebred Holstein bull.

Here's what happened.

Dams average yield, 3255 lbs. of milk, 161 lbs. of fat.

Daughters average yield, 6,313 lbs. of milk, 261 lbs. of fat.

Granddaughters average yield 11,295 lbs. of milk, 431 lbs. of fat.

In other words, the daughters of the purebred Holstein bull averaged:

94% MORE MILK
62% MORE FAT

than their dams, and his granddaughters averaged

245% MORE MILK
168% MORE FAT

than the original scrub dams.

The short cut to greater dairy profits is a purebred Holstein bull.

Think it over!

Send for free booklets.

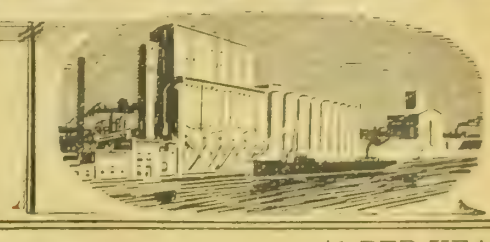
The Michigan

BUSINESS FARMER

An Independent
Farmer's Weekly Owned and
Edited in Michigan



Vol. VII, No. 50 | MT. CLEMENS, SATURDAY, AUGUST 21, 1920 | $1 PER YEAR

A Midsummer Day

In this issue:—Milo Campbell, Farmers' Choice for Governor—Farmers Back Candidates for State Legislature

If you want your share of our 8 per cent investment please reserve it to-day!

Friends:

IF YOU have now or will have after Harvest from a hundred to a thousand dollars or more which you would like to invest in a security paying 8% per annum, please read this through.

Two weeks ago on this page we announced to our readers why we needed this extra capital and why we believed it to be a good investment. On nearly every mail since we have received reservation orders, like the one at the bottom of this page, for from ten to a hundred shares.

We hope you were one of those fortunate enough to get a block of this 8% stock, but if you were not, please act quickly to reserve at least a part of what is still unsold. It is simply a case of "first come, first served!"

THIS IS NOT a stock-selling proposition—no one collects one penny of commission for selling it and every dollar you invest goes into making the company back of Michigan's OWN farm weekly stronger and better prepared to fight the farmer's battles in our home state.

THE WHOLE STORY IS JUST THIS:

We offer 2,500 shares of Preferred stock in the Rural Publishing Company, incorporated in Michigan, 1910, at $10 per share.

We promise to pay you 4 per cent twice-a-year, or 8 per cent annually, on every dollar you invest, before the common stock holders draw one penny in dividends.

We reserve the right to buy this stock back after three years, by paying you 8 per cent per annum from the day you bought the stock AND AN ADDITIONAL BONUS OF 5 per cent, or $5 on every hundred you invest!

We hope that every dollar's worth of this preferred stock will go to friends and readers of The Michigan Business Farmer.

RAPID PROGRESS—You are familiar with the rapid progress which this weekly has made since its founding, as an independent weekly in 1917. The strength of a publication is measured exactly by the number of its loyal friends and we will leave it for you to judge the present circulation or "good-will" value of THE MICHIGAN BUSINESS FARMER. It has not been easy sledding over these war years with a new paper, but our advertising receipts for the first six months of 1920, were just 50 per cent in advance of last year, while our circulation receipts for the same period showed a gain of 26 per cent, or a net gain from all sources over 1919, of 34 per cent. The net earnings for this period amounting to more than the total net earnings from the first issue in 1917 to the end of December, 1919.

A DOUBLE INVESTMENT—While we know that your investigation of our balance sheet and your knowledge of the growth of our business, will justify your confidence in this preferred stock issue which we offer at this time, we want you to feel too, that you are makng a double-investment. THE MICHIGAN BUSINESS FARMER is more than a business without a soul or a purpose, it is an institution which we dedicated from its first issue to "the needs of ALL the farmers of Michigan!" It has no creed, nor politics, sponsors no single farmers' organization but believes in ALL that are working for his welfare. Particularly have we tried to be the friend of those who needed help or encouragement. We have never run from the fight in the farmers' behalf or hesitated a moment between the right and the wrong path. So when we lay before you, our friends, who have stood by this weekly during the first trying years this opportunity to help put it well over-the-top, we hope you will know that you are not only making a good investment for your money, but giving a boost to a Michigan institution working a service for this state, the value of which you are best able to judge.

THE PRESENT OFFERING—From all the above you might take it that we had several hundred thousand dollars to raise. As a matter of fact, we need just TWENTY-FIVE THOUSAND DOLLARS ($25,000), which we have decided to issue as a Preferred Stock, paying Eight per cent (8%) semi-annually or cumulative if any dividend is passed. The preferred stock is a prior claim to all dividends and to the business and property itself, over the common stock and the dividends of 8 per cent per annum MUST be paid in full on the preferred stock before the common stockholders can secure one penny in dividends. It must be redeemed by the company on June 2nd, 1940 at par. The company, however, believing that it will desire to retire this preferred stock after a few years, reserves the right to buy it back at a premium of 50c per share or 5 per cent premium on a share of $10 par value, after three years from date of issue. This means that if the company at the end of even five years should decide to buy back this preferred stock, they would have to pay you $10 per share, plus accumulated dividends at the rate of 8 per cent per annum, plus 5 per cent or 50c per share, which would, if bought back within a five year period amount to 9 per cent per annum on your investment.

SAFETY IN PREFERRED STOCK—The interest in the building, machinery, office equipment and paper stock of the company is to-day appraised in value at $45,000, or nearly double the entire amount of this preferred stock issue. This does not take into consideration nor attach any value to the circulation and good will of the publication, THE MICHIGAN BUSINESS FARMER, its franchises branch offices and advertising contracts, which, as you can imagine are very valuable and would sell as a going-business at a high figure. It is on all the property of the company that this $25,000 has a prior lien over the common stock and when it is understood that the common stock is owned by the publisher, editor and those actively interested in the direction of the company's business, it is obvious that the management will always be so conducted that neither the preferred nor common stock will be in jeopardy.

A CLOSING WORD—We hope to have only friends and readers of long-standing among those fortunate enough to get a block of this stock issue. We hope that it will be scattered into every county in Michigan. For this reason we will sell the remaining shares in blocks of ten shares or more at $10 per share, while it lasts. Payment to be arranged for on a mutually satisfactory basis, when allotment of stock is made.

Geo. M. Slocum

President,
Rural Publishing Company, Inc.

NOTE—Only two hundred and fifty of our readers could avail themselves of this 8% preferred stock. If each took our minimum allotment of not less than $100 or ten shares to a person. Several of our friends and reader have taken one or more thousand dollars worth, **SO THIS WILL IN ALL PROBABILITY BE THE LAST PUBLIC PROSPECTUS OF THE SALE OF THIS SECURITY**, therefore if you want any of it, please send the coupon order form below TO-DAY! "First come, first served," so if the stock is all gone before your reservation order is received, we will return your order with our thanks immediately.

RESERVATION ORDER FOR 8% PREFERRED STOCK

.....1920

Mr. George M. Slocum, President,
THE RURAL PUBLISHING COMPANY, INCORPORATED,
Mt. Clemens, Mich.

If not already sold, please reserve for me.....shares of Eight Per Cent (8%) Preferred stock in the Rural Publishing Company, at Ten Dollars ($10) per share.

Payment to be arranged for on a mutually satisfactory basis, when allotment of stock is made to me, otherwise this reservation order does not obligate me in any way.

Signed .....

P. O. ..... R. F. D. No. .....

(2) County .....State .....

POTATO SITUATION IN MAINE

The acreage of potatoes in Maine has increased 76 per cent over last year, probably due to the high prices last year and indications of a good price the present season.

The acreage in 1919 was 102,000 the tubers being of fine quality and kept good in storage, better than in ordinary years.

It is reported that Maine has 118,000 acres this year (1920) however the stand is generally poor with healthy vines. All indications is for a decrease in production this fall, even with a larger acreage.

Early this spring it was thought the acreage would be cut materially due to the late shipment of fertilizer, but it resulted in later planting. The late planted potato vines are small and unless very favorable growing season prevails they will yield a small crop.

Aroostook County, the potato king county of Maine, is reported as having 90,000 acres, a large increase over 1919. The stand in Aroostook is very uneven however, the vines are looking healthy.

A rainy period for the past three weeks indicate a blight season and at present many farmers are reporting blight.

This is earlier than we usually have blight. The cobbler varieties are looking better than the Mountain varieties. It is pretty hard at present to predict what the yield will be, because blight or frost or something might come.

Potato buyers are offering from $3 to $4 per 165 lb. bbl. on fall delivery contracts.—*Ray S. Hews, Eastson, Maine.*

HOLSTEINS DOMINANT

County Agent F. S. Dunks, Howell, Mich., states that there are 321 breeders of purebred cattle in Livingston County. There are 250 registered Holstein bulls, 37 registered Shorthorns and 15 registered Jersey bulls.

Crop Reports

MONTCALM—The farmers are busy harvesting oats, threshing and plowing for fall grains. Condition of weather is warm with frequent heavy rains. Some winds and hail. The condition of soil is good and crops growing well. The farmers are not selling much of anything but some live stock and a few early potatoes. The farmers here are not building anything at present. Frank Young, an old pioneer resident was instantly killed, his auto having turned turtle, falling upon him. The following prices were offered at Lakeview: Wheat, $2.15; corn, $4; oats $1; rye, $1.55; No. 1 timothy, $30; No. 1 light mixed; $30; cucumbers, $3 per cwt.; hens, 22c; springers, 40c; butter, 55c; butterfat, 54c; eggs, 42c; hogs, veal calves, 15c.—G. B. W.

SANILAC (C)—The haying is about done, winter wheat all in barn or stack. Farmers cutting oats which are a very good crop. Have had a few local rain storms. Have not had much rain in Custer but there seems to have been rains around Sandusky and south of there this week. It would help the crops and make the ground in shape to plow wheat. Where there has not been much rain the ground is getting pretty hard. Some farms are changing hands. There has been two big farms changed hands around Sandusky in the last few days, one a 160 farm sold for $20,000. That is not so bad for a price; it is a good farm. The following prices were offered at Sandusky: Wheat, $2.20; oats, 66c; rye $1.71; barley, $3; beans, C. H. P., $6; peas, $2.25; clover seed, $13.50; timothy seed, $3.40; alsike seed, $13.55; butterfat, 53c; eggs, 50c.—A. B.

GENESEE—Farmers have been busy threshing, harvesting oats and barley cultivating potatoes and beans and plowing. The weather has been exteremely dry until the last week, when we had quite a lot of rain. The heavy rain and hail of a week ago did heavy damage in some localities. The soil has been too dry for plowing but the recent rains will make it fine for working. Quite a lot of threshing has been done in the fields. Some farmers are having good yields of wheat and oats, but on the average the yield will be quite a lot below the average. Hay also was a short crop. Corn is looking good in most instances. Beans average from fair to good. The dry spell hurt the early beans quite a bit. Potatoes are looking good, but there is a small acreage. Apples are also looking good and there are prospects of a large crop. The following prices were offered at Flint: Wheat, $2.35; corn, $1.65; oats, 90c; rye, $1.75; buckwheat, $3.25 per cwt.; beans (C. H. P.) $6 per cwt.; beans (Red Kidney) $11 cwt.; Hay, $25@30; rye, wheat and oat straw, $8@12; potatoes, $2@2.50; onions, $2.75, cabbage, 3c; cucumbers, 75c doz.; hens, 35c; springers 40@45c; ducks, 32c; geese, 22c; turkeys, 40c; butter, creamery 56c; dairy, 53@58c; eggs, 51c; apples, $2@2.75; beef steers, 10@12; beef cows, 8@9; veal calves, 8@19; sheep 7@8; lambs, 16@14.50; hogs, 15@16.—C. W. S.

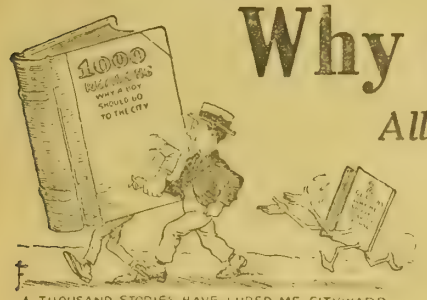
Why the Farm Boy Goes to the City

Allured by City Advantages Painted in Bright but False Colors

By H. G. WEAVER



A THOUSAND STORIES HAVE LURED ME CITYWARD —

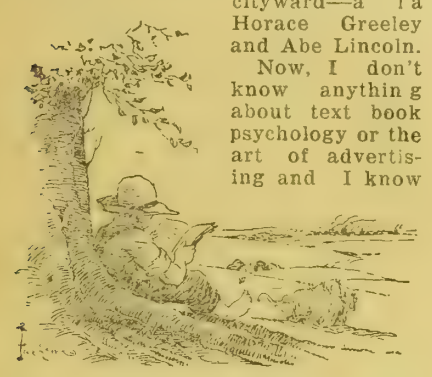
THIS ARTICLE was written by one who might have been a farmer, but chose city life instead. While he is inclined to ignore the economic and practical aspects of the drift of country people to the city, his views are refreshing and contain much pointed truth, comments upon this article are invited.—Editor.

WE HEAR a lot of talk about the farm boy leaving the farm. The chances are that we are going to hear even more of it before we are through.

I live in the city, but personally, I'm in favor of the farm boy staying on the farm—everyone is in favor of the farm boy staying on the farm—that is everyone except the farm boy himself!

It's hard to find a magazine or a newspaper that doesn't bemoan the lamentable condition of the farmer and preach the necessity of the farm boy staying home.

Famous writers write about it. Editors comment on it. Politicians rave over the subject and campaigns are planned to keep the farm boy farming. And while this goes on the farmer lad continues to pack his grip or "telescope" and meander cityward—a la Horace Greeley and Abe Lincoln.



Now, I don't know anything about text book psychology or the art of advertising and I know very little about farming, but I think I know something about human nature—and I think I know something about farmer boys—at least I have this much in common with them:

I was raised in a rural community. I have lived on a farm. Most of my friends and acquaintances are farmers. Practically all of my schoolmates weer farmer boys.

Lastly, I am not old enough to have forgotten what it is like to be a boy and unless things have changed a lot during the past half generation, farmer boys are very much the same as other boys.

Boys don't like to be kept anywhere. Boys don't want to be told where they must stay put!

Personally, I wouldn't give two cents for a boy who doesn't like motion, who doesn't like progress and who doesn't like activity!

The placid, peaceful, plodding side of farm life has been played up so frequently in contrast with the city that the word "farming" has become synonymous with the word "stagnation."

I may be wrong on lots of other things, but I'll risk my meagre reputation that I'm dead right on this:

The way to keep the boy on the farm is not to try to keep him there at all. The thing to do, and the only thing to do, is to make him like the farm and the only way to make him like the farm is to make the farm likable and then prove to him that it is likable. After that's been done you don't need to worry about keeping him there—you couldn't pull him away with a 40-80 tank type.

It's going to take a lot of constructive effort to do this.

Let's get away from the word "stay"—the Young American—the farmer boy—doesn't like to stay anywhere. He likes to move on. It's human nature to want to move on. What's more, he's going to move on! And if he can't move on in the direction of progress, he's going to move on geographically—and that means to the city!

Let's forgt all about this back-to-the-farm stuff. If the movement of labor from the city to the farm is a "backward" movement we had all better quite right now.

Let's abandon the expression "keep the boy on the farm." Let's put the kibosh on it for all times. It sounds too much like Sing Sing prison talk. A boy who is worth having isn't going to let you keep him anywhere. He will determine his own destiny. He will move along just to be independent—and the chap who isn't built that way doesn't count!

My father was a farmer. He was a good farmer. He was an up-to-date farmer. He was aggressive. He was a booster. He was an enthusiast and a Peptomist—in other words he was an exception!

It would have been the most natural thing in the world for me to have followed farming. I'll tell you why I didn't—I'll tell you the truth about it:

Primarily it was because city and industrial life were more effectively press-agented. The newspapers had always been full of stories of commercial and industrial achievement. The popular magazines fairly reeked with highly colored biographies of men who had achieved success in the city—men who were powers in the big industrial world—men who had had their start as hard working farmer boys—men who went to the city to seek greater opportunities.

And the city (according to the stories) received them with open arms. Most of them were elected to the presidency of the United States while not looking; others, of somewhat lesser ability, became steel magnates and oil kings, while the mediocre, second-class, general run of the mine, gravitated to the more lowly stations of bank presidents and railroad directors—at least that's what the stories taught.

That's the kind of stuff the magazines handed me when I was a kid. That's the kind of dope I read in the Sunday papers. Or, if I didn't like it in homepathic doses I could get Horatio Alger's complete works—from "Bill, the Bootblack" to "Mark the Matchboy"—expressed in predigested monosyllables and sold on the easy-payment plan!!

Even my own father couldn't make much headway in competition with the metropolitan press. And again—when I wasn't reading Alger books or milking cows, I was down at the village hostelry listening to suave drummers with diamond scarf pins and kinky noses lamenting the necessity that forced them to visit such [illegible] They would wax eloquent in their descriptions of city [illegible] city conveniences, city salaries, metropolitan attractions, etc.

The Liability Side of His Ledger

That was enough to make me give up the idea of farming, but that was not all—the farmers whom I knew—the majority of farmers, the average farmers, the old-time dyed-in-the wool orthodox farmers—were not a cheerful lot. They were not optimistic. They were not boosters. They didn't have a press agent. They lacked an Horatio Alger.

These same farmers—these average farmers—would listen to the city man's talk. They would listen with open mouths and hands falling limply and helplessly at their sides.

The younger generation also listened—they listened—they thought—they went back home—they lost interest in agriculture—they became bored with farm life—the city beckoned them. Again they re-read the most thrilling chapter of "Ned, the Newsboy" and forthwith took up the study of time tables.

The city is well press-agented. It always has been and I guess it always will be. The farm is not. The lives of great men carry a subtle appeal for the metropolis—the successful farmer is the Uncrowned King. I've read a hundred—I guess a thousand stories that have lured me cityward.

I've never been able to find but two stories that painted farm life as holding possibilities for big achievement and real life!

The farmer needs press agents—he needs lots of 'em—he needs 'em bad. I shudder to think what will happen if this need isn't filled—and filled pretty quick.

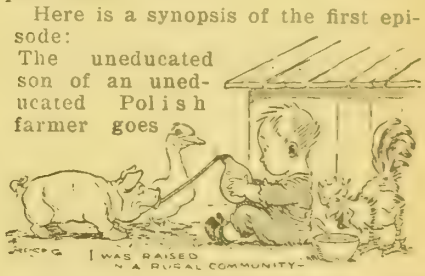
For the past six months I've studied everything I could get my hands on that was supposed to relieve the farm labor situation.

There have been many stories aimed in this general direction, but few have come within shouting distance of the bull's eye.

I'll tell you about one story in particular:

Here is a synopsis of the first episode:

The uneducated son of an uneducated Polish farmer goes



to the city "to work through the winter." In less than twelve months he writes his father than he is making seventy-five dollars a week.

The father answered the letter, to-wit:

"If you make seventy-five dollars a week you stay there. We [illegible]—the whole family—can't make seventy-five dollars a month out here on the farm."

Maybe that kind of stuff does call attention to a serious condition, but I contend that it makes the condition much worse.

Maybe it is a true story—I'll not question its authenticity—it could have happened and personally I believe it did happen.

But—

What is to be gained by [illegible] such an incident?

Does it make the boy on the farm more satisfied?

Does it make the boy who left the farm anxious to return?

Does it tempt the ambitious city [illegible] to take up agriculture as a life work?

(Published by courtesy Hyatt Roller Bearing Co.)

(Concluded in August 28th Issue)

Milo Campbell, Farmers' Choice for Governor

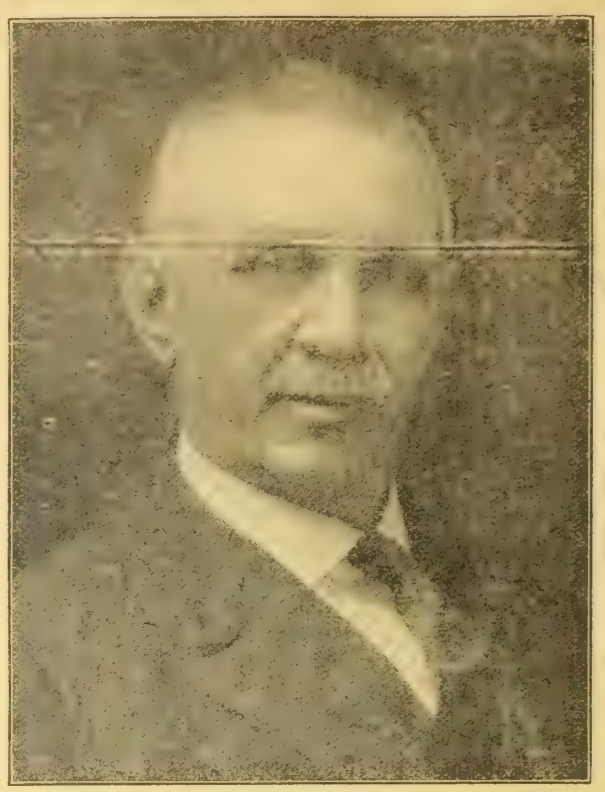
A Brief Sketch of the Life and Deeds of the Man whom we Believe will be the Next Governor

IN 1916, Milo D. Campbell, farmer and lawyer of Coldwater, went as a delegate to a convention of the National Milk Producers' federation in Chicago. He was virtually unknown to those who had gathered from far and near to attend and address that gathering. He had no place on the program. But as he sat in the audience and listened to the speakers; watched the issues that are a part of every convention take shape; saw the convention divide itself into two unequal parts upon these issues, he was seized with the conviction that those who seemed to be in the majority were wrong. Without hesitation and in his characteristic fighting manner, he arose to the floor and in a speech that rang with eloquence and conviction hammered down the defenses of the opposition, carried his point; and before that convention adjourned was elected president of the National Milk Producers' federation.

Such was Milo Campbell's dramatic entrance into the arena where the farmers battles are fought. From that time on he devoted nearly every waking moment to the farmers' cause. He traveled all over the United States driving home truths about the farmer and the farming business. His advice and counsel was sought for by milk producers' association from coast to coast. In every important battle over the right of farmers to organize and sell their products collectively Campbell was there with his coat off and his sleeves rolled up. His legal training coupled with his inate sense of justice, his love and compassion for the farmer, made him a formidable protagonist.

After we entered the war Mr. Campbell was appointed a member of the Agricultural Advisory Committee and spent most of his time in Washington where the Food Administration and the President often consulted his views in conference over matters affecting the farmers. In this connection his counsel was conspicuously frank and fair to all concerned. More than once his watchfulness prevented the adoption of policies that would have been unfair and injurious to the farmers, and more than once he forced the adoption of other policies which for his sponsorship would not have been considered.

THE BUSINESS FARMER did not become acquainted with Mr. Campbell during his boyhood days, nor yet during the years when he rendered splendid service to the state of Michigan, as a legislator, secretary to Gov. Luce, insurance commissioner, etc. It was not until three or four years ago that the exceptional worth of this exceptional man came to our attention and we found that all his life he was nearly always on the job when the farmer's case was heard and that he was nearly always in the right. It was not as a result of any personal consideration for Mr. Campbell but of our admiration for his courage and progressiveness that we have on many occasions given him the hand of approval. Go back thru the files of THE BUSINESS FARMER and you will find article after article in which Milo D. Campbell figured as the outstanding champion of the farmers' rights among the national farm leaders.



MILO D. CAMPBELL

These are some of the reasons which led to the endorsement of Mr. Campbell by the farm organizations and THE BUSINESS FARMER. Some readers have asked upon what grounds Mr. Campbell claims the support of the farmers, and it will not be amiss to review his record.

A Farmer Boy

In the first place Mr. Campbell came from a family of farmers. His father was a farmer in rather moderate circumstances in Branch county. Milo worked on the farm until he was fourteen years of age when it became necessary for him to shift for himself. Through his own efforts he secured an education, being obliged to quit school and college on several occasions in order to replenish his pocket. For a time he taught school and was for several years county superintendent of schools. Later he studied law. While yet quite young he was elected to the legislature, where he exhibited such abilities that Gov. Luce chose him for his private secretary. From then on he has been more or less in the public service, practicing law at odd intervals, but giving a great deal of attention to his two farms in Branch county where he has had at times herds of over one hundred head of pure-bred Holsteins. The past few years he has devoted almost his entire private attention to the active management of his farms.

Among the public positions he has held should be mentioned the United States marshalship for the eastern district of Michigan, Mr. Campbell being appointed by Theodore Roosevelt. He lost his job, however, when Mr. Wilson was elected.

Mr. Campbell is a member of the Congregational church, but is usually liberal in his religious views. He has a pretty fair reputation as a preacher and filled more than one pulpit and in churches of more than one denomination.

Mr. Campbell was in a large measure responsible for the wheat price being set at $2.26 instead of $2. In a conference with Hoover at which Mr. Campbell was one of the few actual farmers present it was all but decided to recommend $2 as the minimum price when Mr. Campbell presented such telling arguments against it that the price was increased to $2.26. Later Mr. Campbell discovered that in many sections of the country the dealers were not paying the farmers what they should under the guaranteed price. He immediately went to Washington, secured an audience with Mr. Hoover to such good purpose that the price to the farmer was raised throughout the country.

Mr. Campbell's greatest work perhaps has been in connection with the dairy industry. The efforts of the politicians of Chicago, New York and other great cities to prosecute the farmers for charging what their milk was worth aroused Mr. Campbell to such lengths that he undertook a campaign of publicity and bitter denunciation of the farmers' persecutors which gained the sympathy of the public and in almost every instance secured an acquittal for the accused farmers. He has contributed in no small way toward putting the dairy industry on a business basis and securing for the farmer a price commensurate with the cost of production.

Nearly two years ago when the government took charge of the wool clip of the country Mr. Campbell uncovered and made public a gigantic conspiracy on the part of the Boston wool combination to defraud the farmers and the public of millions of dollars through their manipulation of the clip. Mr. Campbell presented to the U. S. Wool Division actual facts and figures which caused an investigation and nipped the game of the conspirators in the bud. As recently as the spring of the present year Bernard Baruch of the War Industries Board, to whose attention the matter was brought, publicly acknowledged Mr. Campbell's services in this connection. As a result of these efforts nearly a million dollars will be distributed among the wool growers of the eastern section of the United States.

Mr. Campbell on State Issues

It has been asked where Mr. Campbell stands on such issues as the state constabulary, taxes, the warehouse amendment, state institutions, etc. Mr. Campbell is opposed to the State Constabulary as it now exists. He believes in a state police force, however, to be recruited from the wardens of the fish, game and forest fire departments and the inspectors of the food and drug department. He believes that we have too many wardens with police or semi-police powers. He would consolidate and give each warden power to act in behalf of any state department. But he has no use for state police patrolling the state in uniform. He believes that local officials should be compelled under penalty of removal from office to enforce the law in co-operation with the state wardens, and that the latter should be depended upon in times of violent strikes, riots and other emergencies which are rare occurrences in Michigan.

Mr. Campbell was the first candidate to declare for strict economy in the conduct of state affairs. And he is the only one who has announced a definite plan of economy. He has promised if elected to bring about a reduction in the innumerable boards and commissions of the state, entirely eliminating the functions of some and co-ordinating the functions of others. In this way he believes that a large sum of money can be saved to the taxpayers.

On the warehouse amendment Mr. Campbell has stated that he believes in the principle of submitted constitutional amendments to the vote of the people. There is no doubt that had he been governor during the past two years he would have recommended the submission of this question.

Those who are actively supporting Mr. Campbell's candidacy, and they include nearly all the agricultural leaders of the state and rural communities, are thoroughly satisfied that Mr. Campbell, if elected, will continue to give agriculture the same sympathetic consideration as in the past. As Governor of Michigan he will have the influence and power to render still greater service to Michigan agriculture. The farmers and their wives of this state can put Mr. Campbell in that position. It is up to them.

Farmers Back Candidates for State Legislature

Aroused over Extravagancies of Last Legislature and Warehouse Rebuff Farmers Take Active Hand in Fall Campaigns

By THE EDITOR

IN THE large majority of the agricultural districts of the state the farmers have either endorsed one of their number for the state senate and house of representatives or are working quietly in unison for the candidate most likely to give them the best representation. This is not the result of any state-wide movement to organize the farmers. On the contrary the action is purely local in its inception. The farmers are, however, moved by a common desire. To purge the legislature of its spenders and to punish those who couldn't trust the people to vote on the warehouse amendment.

The sentiment for a change of representatives that will more nearly reflect the views and interests of the farmers is most pronounced in the Thumb, in nearly every district of which there is a hot contest between machine candidates and farmer candidates. Among the farmers there is little division of sentiment. In several districts the local or county farm bureaus have officially endorsed candidates, and members of all farm organizations are joining hands to nominate them.

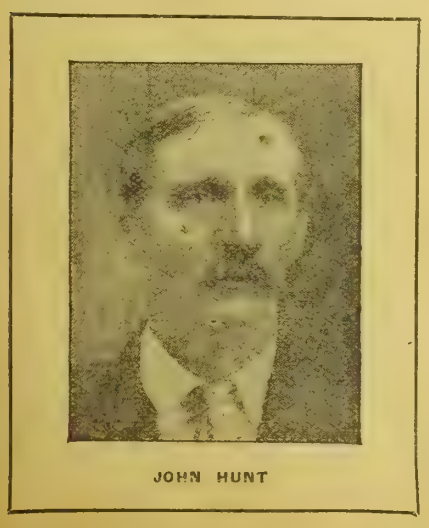
The Twentieth District

The twentieth senatorial district comprises the counties of Huron and Sanilac, represented last year by Geo. B. Forester, a banker of Dackerville, whose record for economy is notorious for its absence. The situation in this district is placed before us by a Harbor Beach subscriber, who writes as follows:

"Mr. John Hunt of Huron county became a candidate for state senator only after long pursuasion by members of the Farm Bureau, supposing it would be a clean-cut race between him and John Wallace. Mr. Wallace withdrew, and now 'they' have selected State Senator Forrester of Sanilac county again, who has filled this office two years. In this district it has been an unwritten law that one county should name the candidate for a two term period and then the other county should have this privilege. This custom has been in effect for many years, but this summer the farmers of the district selected a Huron county man as their candidate. Because of the opposition to the farmer candidate various financial interests in these counties have circulated petitions for the renomination of Sen. Forrester.

"In all fairness Huron county should send the next senator to the state legislature from this district and John Hunt, progressive Huron county farmer is the man who should receive the support of every fair-minded man in Sanilac and Huron counties. Mr. Hunt is personally known to those who have induced him to run, and without question, if elected he would be one of the best senators that the district as a whole ever had.

"John Hunt is a pioneer of Huron county. He owns a large and attractive farm in Verona township on which he has labored for over forty years to turn a forest into fertile. He has been intensely interested in whatever activity would make for better and happier conditions in his community, as the perusal of the following will show:



JOHN HUNT

"Born in Wisconsin. Parents from New England, came with them to Lapeer county, where he was left an orphan at two years of age. Brought up by strangers. Educated in the district and high schools of Oakland county. Taught in district and village schools 13 years. Came to Huron county where he has since resided since 1878. Cut the road to and cleared up a new farm. Twelve years supervisor of Verona township. Twenty-two years president Huron County Mutual Fire Insurance Co. President since its incorporation of the most successful co-operative elevator in Huron county. Helped to organize a county farmers' institute years before the state gave its financial assistance and was five years its president. Is a member of the County Road Commission. He was chairman of the Huron county farm bureau membership drive. If elected he promises to fairly represent every interest of the district."

Clare District

A partial history of the farmers' political movement in the counties of Clare, Gladwin and Roscommon, constituting the Clare representative district and a part of the 38th senatorial district, has already been given in these columns. It was largely thru efforts of John Fitzpatrick of Beaverton that meetings were held in Clare county to discuss endorsement of farmer candidates and resulted in choosing of himself and George Stehle to represent Clare county in making such endorsements. County Agent Atwater of Gladwin county took an active part in a poll of farm bureau members which resulted in the appointment of Mr. Elmer Gedney and Levi Pfenning to represent Gladwin county. With Mr. Edward Coan of Roscommon county these four gentlemen endorsed Mr. Richard Emerson of Grant Township, Clare county, as the farmers' candidate for the house of representatives.

RICHARD EMERSON

As campaign thunder this committee has secured the signed approval of a large number of actual farmers of the district who are personally acquainted with Mr. Emerson and can vouch for his ability and integrity. It is believed that the rest of the farmers of the district will place their confidence in the judgment of these and throw their support to Mr. Emerson.

Mr. Richard Emerson

Mr. Emerson, the candidate, has lived on a farm all his life and at present is farming 130 acres in Grant township, Clare county. He has represented his township on board of supervisors for ten years, and has been chairman of the board for five years. At present he is chairman of the Clare County Road Commission. He has always taken an active part in the agricultural affairs of his county, and is well-equipped to represent the farmers of the Clare district in the legislature.

St. Clair County, 2nd District

Upon the urging of his friends Farmer John Volker of Marine City has entered the race for state representative from the second district of St. Clair county, opposing Mr. Franklin Moore, a well-to-do salt manufacturer of St. Clair, who has held the office two terms. Mr. Volker has the endorsement of the Marine City local of the St. Clair County farm bureau and of the Starville Farmers' Club.

Mr. Moore's stock argument as to why the people of his district should give him a third term is that by virtue of his being speaker pro tem of the 1919 session he stands a good show of being selected speaker of the next session, thereby conferring an honor upon St. Clair county. In fact, Mr. Moore says he has "already received a large number of voluntary pledges of support for that important office." A strange statement, indeed, when no man knows who will constitute the next session of the legislature.

JOHN VOLKER

We have nothing against Mr. Moore. We understand that he was a very accommodating gentleman in the last session of the legislature, voting for most of the appropriations, commissions and other measures involving expenditures of the public money. His claim for future political honors should rest upon his record. THE BUSINESS FARMER reproduces it below that his constituents may become informed thereon:

On page 1863 of the Journal of the House, session 1919, appears the following:

"The Committee on Revision and Amendment of the Constitution, by Mr. Ivory, chairman, reported Senate Resolution No. 5 (proposing the warehouse amendment,) without recommendation.

"Mr. Franklin Moore moved that the joint resolution be laid on the table.

"Mr. Braman demanded the yeas and nays.

"The motion made by Mr. Moore then prevailed, a majority of all members voting therefore, etc."

And that was the end of the warehouse amendment.

Mr. Moore was conveniently absent from the House when the boxing commission bill came up. But he entered a few moments after and was just in time to vote for the resolution to amend the constitution permitting an increase in the salaries of circuit judges.

Although Mr. Moore was in the House at the time the vote was taken on the State Park Commission he was one of five who did not vote either way on the measure. However a few moments later he did vote to permit spearing suckers in the Chippewa river.

Mr. Moore voted for the State Constabulary and an appropriation of $370,000.

John Volker

John Volker, who aspires to succeed Mr. Moore, is as we have said a farmer. He needs no introduction to the people of his district for nearly everyone in St. Clair county knows John Volker. He was born on a farm in Michigan in 1863, and attended the public schools. As a young man he took to sea and sailed the Great Lakes from 1885 to 1903, retiring as chief engineer. He then actively took up farming which he has followed for seventeen years. As one of the leading men of his community he has held various positions of public trust. He has served for a number of years as township treasurer, treasurer of his school district, and in 1914 was elected to a six year term as county road commissioner, a position which he resigned after two years of service. During the war Mr. Volker was active in all the patriotic drives in every one of which his district went "over the top" with flying colors. A son served several years overseas, taking part in many of the important battles in which he was several times wounded.

Mr. Volker is a member of the Grange and Gleaners ,and was secretary-treasurer of the Marine City farm bureau which he resigned, however, in obedience to the constitution of the Bureau when he became a candidate for state representative.

Mr. Volker is a man of high character, honest as the day is long, and his farming and business experience has been such as to equip him well for the position he seeks. He believes firmly that it costs too much to run our state government, and that, if elected he can help reduce expenditures. He believes in letting the pople rule, and giving them an opportunity to express their views on amendments to the Constitution.

If elected, Mr. Volker will probably not be speaker of the next House but he will be something more important than that, a true representative of the people of the second district of St. Clair county.

Sanilac District

In the Sanilac representative district a three-cornered fight is on

CHAS. F. BURNHAM

Farm Bureau to Enter Politics

THE HURON County Farm Bureau will take a hand in county, district and state politics. This, at least, is the report that comes from the meeting of the executive committee and county officers of the bureau held on Tuesday. At that meeting it is said that a resolution was passed pledging the organization to do all it could in the coming primary to promote and secure the nomination of John Hunt for senator; Milo Campbell, for governor; Godfrey Gettle for representative and Chas. B. Scully, of Almont, for lieutenant governor. It is understood that circular letters will be sent out urging the members to support these candidates.

The constitution of the organization is silent on the question of politics, but speakers last winter made statements to the effect that they would not try to control elections, but the members would be expected to support candidates who would favor their interests.

County Agent Campbell says that he is barred from campaign activities because his salary is partly covered by Federal appropriations. This would not necessarily influence the other officers and directors, he said.—Huron County Tribune.

Uncle Sam's Hired Men Who Serve the Farmers

If George Livingston, Market Bureau Chief, Doesn't Put Money in Your Pockets It Won't Be His Fault

By FRANK GEORGE

IT WILL be recalled that in Greek Mythology Argus, the son of Zeus and Niobe, had a hundred eyes. George Livingston, Chief of the Bureau of Markets, United States Department of Agriculture, has but two eyes—being just an every-day human being—but his friends say that his vision is better than Argus' ever was. It has to be good to see all sides of the big farm marketing problems of to-day and then to look after 100 field offices distributed throughout the United States, as well as to direct the activities of some 1,330 employees who are trying to solve them.

But going back a little farther, George Livingston first saw the light of day on September 14, 1886. Thereafter, he spent 18 years on a farm. During that time he saw a great many things. Other people saw them too. But whereas others sat down and grumbled at the hard lot of the farmer, George Livingston determined to apply corrective measures if he ever got the opportunity. At the same time he perceived that Mr. Opportunity might fail to put in an appearance, so he donned his hunting togs and went after him.

At twenty-nine G. L. was an authority on grain and grain marketing. He had graduated from the Ohio State University and thereafter spent five years specializing in agricultural and marketing methods in the capacity of instructor and assistant professor at various universities. His post-graduate course at Corness University subsequently led him to Europe to study agricultural practices there. Then he joined the Bureau of Markets. His executive ability and genius for organization were soon recognized and four years later he was appointed chief of the bureau.

Quick to recognize ability in others George Livingston is never satisfied until its full force is being applied. When he established the grain inspection service he assembled the best talent that could be found—men who knew their business from the ground up. It was not an easy job. There were many persons who knew that while the adoption of standard grades would remove the guesswork from grain marketing and therefore be of huge benefit to the farmer, it would also reduce their own incomes considerably. However, that did not deter G. L. for a moment. But instead of holding a bludgeon over their heads he sought quietly to secure their co-operation. And he did. That is the way he does everything—quietly, courteously, unerringly.

For more than half a century agricultural experts and agencies have devoted almost their entire attention to production problems. But these experts are now agreed that the question of marketing is of equal importance, and that the present marketing system is wasteful and inefficient in many spots. They say that with the present methods farmers lose millions of dollars annually. More important than that is the economic waste caused by the quantity of food actually lost.

It is only comparatively recently, however, that any organized effort has been made to develop the machinery of marketing to meet the nation's requirements. And with the United States leading the world in the maintenance of a government agency to study and devise new marketing methods, economists and students of food distribution problems everywhere are watching closely the results secured by the Bureau of Markets and the man who directs its activities.

Thoroughgoing investigations of existing conditions are basically necessary to improvement of marketing conditions. The Bureau of Markets studies current market conditions, the demand for specific crops, sources of supply, methods of grading, standardizing, packing and shipping farm products, transportation and storage, the nature of the commercial transactions by means of which farm products move from the producer to the consumer, waste in marketing, methods of accounting and business practice used by agencies engaged in the marketing of farm products, co-operative associations of farmers for marketing farm products the purchasing of farm supplies, etc.

The specific commodities to which the most attention has been given are cotton and cotton seed, live stock, meats and animal by-products, dairy products, grain, hay, feeds and seeds and fruits and vegetables.

Already conspicuous achievements have been secured by establishing standard grades for farm products, reducing waste caused by faulty storage and shipping methods, and lowering costs of distribution of some agricultural products. One or two examples will indicate what it is possible to accomplish by improving the present marketing methods.

By developing an inexpensive storage house for sweet potatoes and widely advocating its use the loss by decay of the sweet potato crop has been reduced from 25 per cent to 2 per cent—a saving ofabout $2,000,000 a year.

The president of a national bank in Marshall County, Texas, has stated that the service rendered by the Bureau of Markets in connection with the assistance given cotton growers in grading and stapling cotton before sale has been worth $150,000 to the county. Another prominent man in Hall county, Texas, states that similar service performed there has been worth $200,000. Hundreds of letters containing statements such as these regarding all agricultural products are continually received by the bureau.

G. L. considers that the standardization of farm products and the containers in which they are packed is fundamentally the most important work being performed by the bureau; a work that is basic to all improvement in marketing, for without established standards and grades there is no recognized basis for buying and selling; no common language by which the parties to a transaction may understand each other; no uniform standard of quality upon which values and prices may be based.

Mandatory standards have been fixed for American Upland cotton, including grade, coor and length of staple; for shelled corn, wheat and oats and for climax baskets and containers for small fruits, berries and vegetables. Permissive standards have been recommended for white potatoes, sweet potatoes, Bermuda onions, strawberries, Seo Island and American-Egyptian cottons, and tentative standards have been formulated for some other commodities. There is urgent need for the standardization of hay, wool, live stock, dairy and poultry products. In the matter of hay alone many farmers have stated that 9-10 of the losses sustained in the hay business are due to a lack of standard grades and a uniform impartial inspection service.

He also believes that the economic waste caused by shipping products to glutted markets and away from under-supplied markets, will be prevented by the use of the Bureau of Markets news service which many farmers find of inestimable value in marketing their produce. These reports cover live stock and meats, poultry and dairy products, fruits, vegetables, peanuts, cotton, hay, feed, and seed. The cantaloupe growers and shippers of California state that this service together with the assistance given by personal representatives of the Bureau of Markets, have saved them $1,000,000 in a single season.

The daily, weekly and monthly reports and summaries showing market conditions, prices, movement, supply and demand in connection with live stock, meats, wool, hides and skins; the preliminary standardization of classes and grades of these products; investigations of waste and loss in marketing with suggestions for improved methods and stock yard supervision calculated to detect and prevent dishonest practices have effected a stabilization of the live stock markets and a saving of millions of dollars, directly and indirectly, to the producers, shippers, and handlers concerned.

Prior to the establishment of these market news services a few large organizations only were able to obtain reliable information on market conditions. Such information is now available to producers and to all interested parties. This protects the small producer and dealer, brings about more stable conditions and better distribution, and benefits consumers as well.

To make its reports of the utmost practical usefulness, the bureau has equipped itself with the fastest system of communication available today, and its branch offices in the great consuming and distributing markets are connected by leased telegraph lines operated by bureau telegraphers. These wires are busy from eight to twelve hours a day in the exclusive transmission of information which is vital to intelligent and successful food distribution. At one time during the war the bureau operated 17,000 miles of leased wires. These wires now extend about 5,000 miles and the mileage must be further decreased on account of reduced appropriations.

Before the news services could be successfully operated it was necessary to get the co-operation of the railroads, to obtain information regarding the carlot movement of certain commodities. At the present time nearly 1,200 agents on 474 railroads, involving 248,000 miles of road, send in reports which are used in connection with the daily telegraphic bulletins on fruits, vegetables live stock and meats.

Another important factor in marketing is the Food Products Inspection Service established by the bureau, by the use of which shippers and others interested can obtain certificates attesting the condition of their perishable products received at central markets; a service that facilitates the distribution of the products covered, hastens the release of cars, lessens deterioration and waste on account of delays resulting from disputes as to the condition of products, and prevents unfair trade practices.

At the present time fruit and vegetable inspectors are stationed at twenty-five markets, about 147 additional markets being served from these stations. Butter inspectors are stationed in New York, Philadelphia, Chicago and Boston.

Then there is the organization of farmers' co-operative associations—permanent, economic institutions that have a far-reaching effect. There are now more than 14,000 farmers' co-operative associations in the United States, in the organization of many of which the bureau was called upon to lend assistance. A staff of experts is maintained to study practical methods of co-operative marketing and to place the results in the hands of the farmers.

The writer endeavored to draw out from George Livingston something about himself. But without success. Self has no place in his lexicon. But

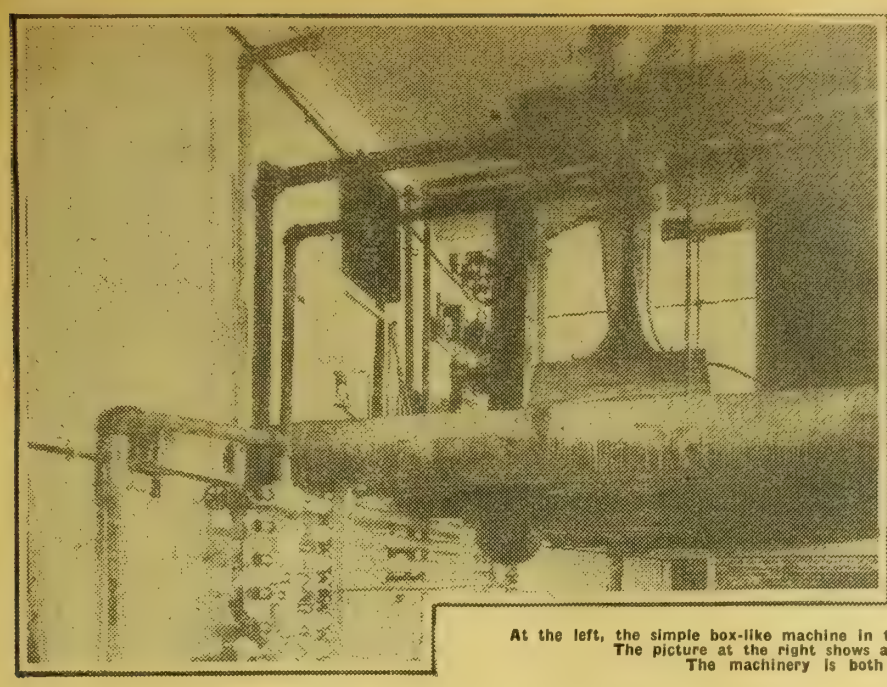
(*Continued on Page* 19)

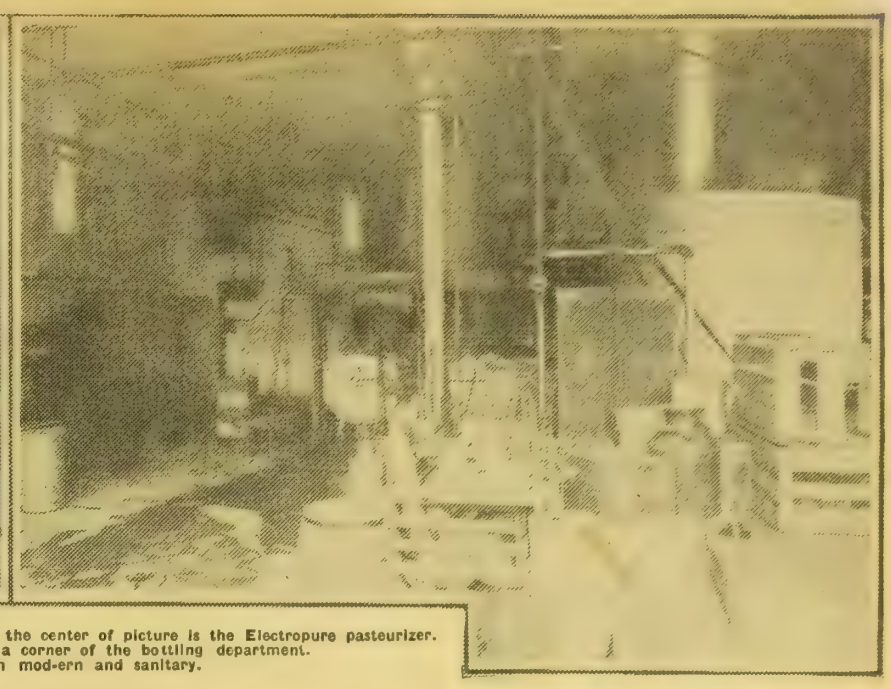
Work of the Bureau of Markets

THE UNITED States Department of Agriculture and the State agricultural colleges and experiment stations for many years have been rendering definite assistance to farmers in the solution of problems concerning agricultural production. A few years ago, however, the necessity for devoting attention to marketing problems became apparent and an Office of Markets in the Department of Agriculture was created in 1913. This office subsequently developed into the Bureau of Markets. The function of this bureau is to assist the farmer in solving problems of marketing and distribution, as the Bureaus of Plant and Animal Industry of the Department of Agriculture have for a great many years assisted him in solving problems of production. The Bureau of Markets deals definitely with the selling end of farming and is, therefore, concerned with questions of economics and business. It has been in existence about seven years and during this relatively short time has done pioneer work in an undeveloped field.

The work of the Bureau of Markets covers the entire United States and it has branch offices or representatives in about fifty places.

The man who has made the Bureau of Markets one of the most valuable departments of the Department of Agriculture, Mr. George Livingston.





At the left, the simple box-like machine in the center of picture is the Electropure pasteurizer. The picture at the right shows a corner of the bottling department. The machinery is both mod-ern and sanitary.

Farmers Market Their Own Milk in Ohio City

Story of How Milk Rroducers of Richland County, Ohio, Overcame Their Distributing Problems

(*By Special Correspondent*)

UP TO AUGUST, 1918 the producers of Richland County, Ohio, were practically at the mercy of the regular distributors, principally one, as this distributor had absorbed every other dealer of any consequence. Thus intrenched the survivor began a systematic effort to still further enrich himself at the expense of the producers. Not only was the price of milk and cream materially reduced but the weights and tests were continually in question. Whole milk dropped to an average for the year of $2.20 per hundred, or one hundred and ten or twenty, depending on how the scales were set, for 3.5 per cent butter fat test and 4 cents a point above and that much less below.

About a year before the above date a feeble effort had been made to oppose these high-handed methods in the organization of a small company with ten thousand capital and named the Richland County Farmers Dairy and Produce Company, but the most formidable part of this undertaking was its name. Nothing tangible was accomplished towards regulating or raising prices. Bad management, small capital, poor equipment and an inevitable deficit soon brought forth an S. O. S. from the few who still clung to the wreckage. This call was answered by J. F. Rudd, President of the Electropure Company, of Chicago.

Mr. Rudd, who was an experienced organizer, met with the producers a number of times, and finally made them a proposition to organize The Mansfield Electropure Dairy Co., with a capital stock of $95,000, using the Electropure process to treat their milk instead of pasteurization.

Some two hundred producers subscribed the stock and the most modern dairy machinery and equipment was installed, of sufficient capacity to handle one thousand gallons of milk, five hundred gallons of ice cream and two thousand pounds of butter a day, which if properly handled would make handsome returns on the investment. In Mansfield there was a ready market for that amount of dairy products of a better quality than was being furnished.

But right here is where the directors made the mistake which has so often been made in organizations of this kind. They seemed to think that almost anybody could manage a dairy distributing plant, and the worst part of the stupidity was that they could not be convinced of this vital error until four men had tried and failed, each leaving a number of excuses but not a single reason—at least not the right reason for their failure, until H. M. Ruhl took charge as temporary manager. One thing that Mr. Ruhl knew better than anything else was that he did not know anything about the dairy business from the distributing standpoint. Another thing he knew which was just as important—that it was absolutely necessary to secure a manager, at almost any price within reason, who knew every phase of a dairy plant and of marketing the product.

Mr. Ruhl's idea of a manager was that he should be a man who had thoroughly learned the dairy business from the ground up. A man who could, if necessary, make good ice cream, churn butter scientifically, know how to treat and care for milk, utilize the by-products and above all, one who knew what bacteria were and how to keep them down to a minimum by employing proper sanitary measures, proper treatment of milk and cream, clean bottles, clean pipes, clean cans and clean everything. He must understand that while ordinarily "cleanliness is next to godliness," in the dairy business is a very part of godliness.

After considerable effort Mr. Ruhl succeeded in convincing the board of directors that he was right, and he was author ized to look for a man meeting his specifications. This was no easy task, because the men who would measure up all seemed to have better jobs, at better pay than his company could afford.

But finally a plan was worked out whereby the manager would become a direct partner in the business. He was to be given a small salary, fifty dollars a week, and fifteen per cent of the net profits. Under this arrangement J. L. Dickerson, a thorough dairy and creamery man, was attracted to the position. He at once began to do things. Not that his predecessors had not been active, but evidently through inexperience have been doing the wrong thing, because Mr. Dickerson's very first monthly balance sheet showed black figures at the end instead of red; and after three months of his management the company was earning at the rate of better than 16 per cent on the entire capital, and these figures are steadily increasing.

So much for the direct benefits. The indirect benefits to the producers of Richland County are far greater. As soon as The Mansfield Electropure Dairy Company was ready to do business they announced that they would raise the price of whole milk to $3 per hundred for 3.5 per cent butter fat test and 5 cents a point above and below, this price to be a minimum for the year. The other companies, of course, had to follow, which meant that every producer in the county was at once receiving 80c a hundred more for his milk, an estimated increase of $4,000 a day, or $1,460,000 a year. At the present time the producer is receiving $3.50 a hundred for his milk, which is the Cleveland price, as compared with $2.20 received before the producers' company was organized. The average price paid in Cleveland in 1918 was $3.20, so the increase cannot be wholly attributed to the general upward trend. There would have been no upward trend in Richland County if the producers had not taken the matter in their own hands and demonstrated that they could run their own business.

The producers of Richland County are anxious that the story of their final success should be known to the producers of other parts of the country, but are also very solicitous that other producers do not repeat their mistakes, should they undertake to solve their problem in a similar way.

Electrical Pasteurization of Milk

The method used by the Mansfield producers to pasteurize their milk is described in the July 3rd issue of the *Literary Digest* as follows:

"The efficiency of the electrical method of sterilizing infected milk has been conclusively proved, according to *The Lancet* (London). The conclusion now is that milk can be rendered free from intestinal bacilli and those of tuberculosis by the electrical method described without raising the temperature higher than 63 degrees or 64 degrees C. Says the writer:

" 'The temperature effect is very short in duration and in itself is not the principal factor in the destruction of the bacteria. It is stated that though the milk is not sterilized in the strict sense of the word, yet the percentage reduction of the bacteria taken over a period of a fortnight, is 99.93.

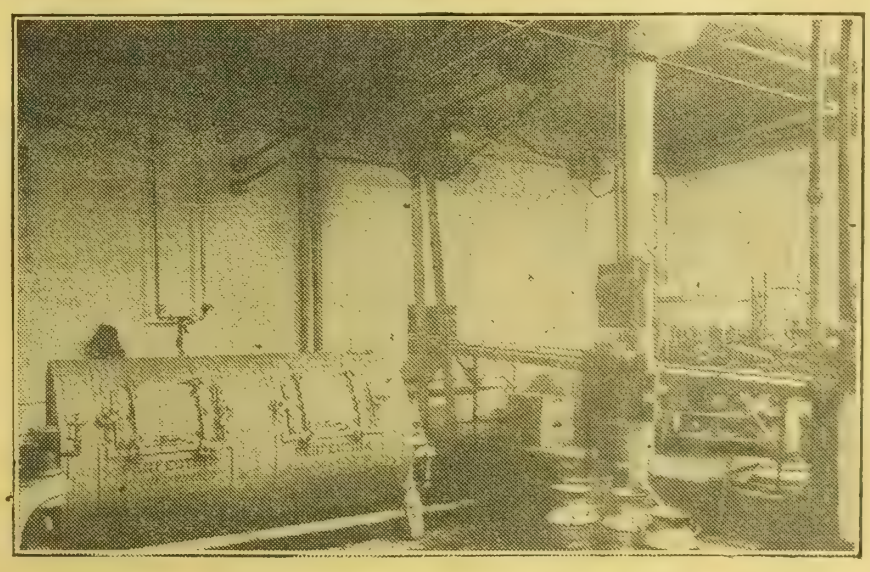
" 'The keeping power of the milk appears to be increased, the taste is not altered, and, so far as careful chemical examination can determine, the properties not impaired, it is definitely stated that the milk so treated can be described accurately as raw milk free from pathogenetic bacteria. No very extensive work has been done nor safe conclusions deducted as to the biological value of the milk so treated, but so far babies fed on this milk are reported to have done 'extremely' well. The bactericidal effects are attributed not to the direct action of the current, as such, upon the bacilli, but to the heat generated in its passage.

" 'The opinion is expressed that in the electrical method the current raises the temperature of the milk more quickly than occurs in simple heat-sterilizing, and since this current passes through every part of the milk the heat which it generates reaches the whole of the fluid at the same moment. We note that the electrodes used are made of copper, and it is known that traces of this metal serve a bactericidal purpose, but in the report it is stated that no trace of any copper or other metal could be found.

" 'The Medical Research Committee concludes that this work has presented us with 'an elegant and practical method of purifying milk for human consumption, of which the use upon a large scale becomes now a problem for closer financial and administrative examination.' "

Economic Value of Method

THE BUSINESS FARMER understands that tests of this machine have definitely proven its economic advantages over the old method of pasteurization. It is stated that the machine can be operated from one-fourth to one-third the cost of operating the steam pasteurizer. Experiments conducted by Prof. Coolidge of the M. A. C., and by members of the Detroit Board of Health seem to prove that the product is of an unusually high quality, having few of the objectionable qualities of pasteurized milk. We will have more to say in a later issue about this machine.



The surplus is manufactured into butter, cheese, ice-cream, etc.

MARKET FLASHES

TRADE AND MARKET REVIEW

Wall Street is predicting that the rate increase granted by the Interstate Commerce Commission will cause lower prices. And it is quite likely as officials of railroads operating east from Chicago and St. Louis report labor conditions better and increased efficiency in the handling of freight, and the roads are rapidly clearing away the freight congestion. Grain markets have declined in the face of small receipts owing to the fact that even though supplies were small they exceeded the demand, and if larger receipts are received at the markets—and and there will be an increased movement of grain as soon as the railroads get the present congestion cleared away—prices will decline even faster than they have been recently. Another factor that is bearing the markets is the credit outlook. Europe is curtailing her exports from this country because of recent decrease in the exchange value of her money in the United States. Credit she cannot get so her imports must decrease. Companies have been formed here in this country to assist foreign countries by advancing credit to them, but these companies have gone no further, as the officials have began to wonder when they would get their money back, and, even though they can get high interest rates, it does not appeal to them with markets and finances in the present condition. These companies were formed, however, before the present slump in prices. Credit for citizens of this country continues rather tight, especially for the man that wishes to speculate on Wall Street. Men that deal in Wall Street stocks has been in the habit of borrowing around 80 per cent of their money on their securities but there is nothing doing at the banks on business of this kind now. One banker says that it is his opinion that money will never be as plentiful again on Wall Street as it has been up to the last few months.

Last Saturday the Interstate Commerce Commission decided how the increased freight rates will be applied in the state of Illinois. They granted the roads the right to increase the rates 40 per cent on interstate traffic between Illinois and eastern territory and a 35 per cent increase between Illinois and western territory. The commission states that this state is so situated that it may be regarded as partly in the eastern territory and partly in the western. We have been unable to learn whether this will also apply to Michigan or not, but after reviewing the commission's decision regarding the "Sucker State" there is no question but that we will be partly, if not entirely, within the 40 per cent limit.

The war news, which has been pushing grain prices skyward, has worn itself out and prices are again easy in all grains but corn. It is believed that the only thing that would cause grains, excepting corn, to advance at present would be reports of serious crop damage, but the only crop that can be damaged seriously is corn as other crops are harvested or too far along. There are reports from the west of damage to the corn crop by early frosts. These reports have given the corn market strength during the past few days which we feel sure is only temporary. Apparently there is only one chance for higher prices and that is shippers being unable to secure cars, but this will have to happen between now and next spring as authorities believe that there will be plenty of new cars and locomotives by next spring.

LAST MINUTE WIRES

DETROIT—Wheat easy. Corn quiet and steady. Oats scarce and firm. Beans inactive and steady. Cattle and hog markets slow.

CHICAGO—Grains are weak and demand light. Both cattle and hogs are steady to strong. Hay in demand.

(Note: The above summarized wires are received AFTER the balance of the market page is set in type. They contain last minute information up to within one-half hour of going to press.—Editor.

WHEAT WEAKENS

WHEAT PRICES PER BU., AUG. 17, 1920			
Grade	Detroit	Chicago	N. Y.
No. 2 Red	2.47	2.54½	2.67
No. 2 White	2.45	2.55½	2.67
No. 2 Mixed	2.45		2.80
PRICES ONE YEAR AGO			
Grade	Detroit	Chicago	N. Y.
No. 2 Red	2.23½		2.34
No. 2 White	2.21⅛		2.32
No. 2 Mixed	2.21½		2.32

The war news has been dissipated and no longer gives strength or influences the trend of prices in the wheat market as it did a week ago. The market is weak but prices are higher than they were at the close of last week. Wheat, for the present, is not expected to decline as fast as it did owing to the increase in shipping demand. Demand from the mills is strong at all milling point excepting Detroit. Export demand is very large again. Most of this export trading is done through the gulf ports. Some of these ports have their yards full of loaded cars that cannot be handled because of the failure of ships to arrive. Government crop reports of August 1st, for Michigan, show early threshing returns of winter wheat indicate poor yields in the southwestern part of the state owing to Hessian fly damage and winter-killing, but in other sections the yield is about normal. The reported average for this state is 15 bushels per acre. This puts the entire crop for Michigan at 12,855,000 bushels. Last year 19,285,000 bushels were produced. The U. S. Department of Agriculture in its August 1st report forecasts the spring wheat yield for the United States to be 262,000,000 bushels as against 291,000,000 bushels for last month. They place the amount of winter wheat at 533,000,000 bushels while the July 1st forecast was 518,000,000 bushels. This makes the total for all wheat 795,000,000 bushels, or 74,000,000 bushels less than July 1st report.

CORN EASY

CORN PRICES PER BU., AUG. 17, 1920			
Grade	Detroit	Chicago	N. Y.
No. 2 Yellow	1.70	1.65½	1.80½
No. 3 Yellow			
No. 4 Yellow			
PRICES ONE YEAR AGO			
Grade	Detroit	Chicago	N. Y.
No. 2 Yellow	2.08	2.04	2.65
No. 3 Yellow	2.06	2.01	
No. 4 Yellow	2.02	1.97	

Enough strength was gained by the corn market from different sources so that when the news of war took on a more peaceful look the market did not weaken like other grains. One of the sources from which the strength came from was unfavorable reports of growing crop. Some sections claim the crop is too dry. Reports have come from Iowa stating that they had had several quite severe frosts and that there would be a good many acres of corn in that state that would never get ripe. Another factor that is holding the market steady is that farmers are holding their old corn as they feel the price is too low already. According to Department of Agriculture reports corn varies a great deal in condition here in Michigan but in general, averages better than last year by about three per cent. Around 19,420,000 bushels will be the production if the present condition can be maintained, but in order to retain it we will have to have sufficient rainfall during the next ten or fifteen days. The farmers living near Brighton in Livingston county suffered considerable damage to their corn crop by hail last week. Some report entire fields a complete loss. The government reports we will have 3,002,000,000 bushels of corn from the way it looks. This is a substantial gain over last month's prediction. An Indiana farmer reports corn too hard for roasting in his state, and that there will be a bumper crop there.

OATS INCLINED TO BE FIRM

OAT PRICES PER BU., AUGUST 17, 1920			
Grade	Detroit	Chicago	N. Y.
No. 2 White	1.00	.75	.98
No. 3 White	.99	.73½	
No. 4 White	.98		
PRICES ONE YEAR AGO			
Grade	Detroit	Chicago	N. Y.
Standard	.81	.76	
No. 3 White	.80	.74	
No. 4 White	.79		

Oat markets are experiencing a very good demand but a serious shortage of receipts and consumers are beginning to worry about where they are going to get enough of this grain to supply them until October. They do not make much use of the new crop for feeding until that time. According to Verne H. Church, U. S. Bureau of Crop Estimates, the present condition of oats in Michigan promises a yield of 52,490,000 bushels. The crops is 30 per cent better than it was last year at this time, and six per cent better than the ten year average. The yield for the entire United States is estimated by the Bureau of Crop Estimates to be 1,402,000,000 bushels, or 154,000,000 bushels more than was harvested last year.

RYE IN ACTIVE DEMAND

Like wheat, the rye market advanced on foreign buying and then declined later, but there is so little rye on the market that the price has not declined very fast. There is not much local milling demand to hold the price up where it is, but reports are about that Germany is taking rye rather freely under cover. The government report suggests a crop of 77,900,000 bushels for the country, which is over 9,000,000 bushels less than last year. Rye rules steady on Detroit market at $2.05 for No. 2.

BEANS QUIET

BEAN PRICES PER CWT., AUG. 17, 1920

C. H. P.	8.25		
Prime			
Red Kidneys			

We have another decline to report in bean prices on the Detroit market. They declined 15c during the current week, but the market is fairly steady and quiet. Regarding the future trend of the bean market, J. Ralph Pickell, the prominent grain market authority, says, "Look for higher values between now and October." The average condition of beans in this state, as reported by government agents, is 90 per cent, and if this conditions is maintained from now on throughout the fall we will have a yield of about 3,194,000 bushels. It is estimated that the yield for the six leading states will be 11,417,000 bushels, which is only 71,000 bushels less than last year's yield. Remember we are predicting higher prices.

COMMITTEE
802 Majestic Bldg., Detroit

cline. Although slightly below the average of last month the potato crop in Michigan is in excellent condition, and a yield of 32,688,000 is forecasted. This will be 4,176,000 bushels more than was produced last year. The estimated crop for the United States is 402,000,000 bushels. Last year's yield was only 882,000,000 bushels.

Hay is firm and in better demand than supply. The crop has made some improvement during the last month and the total production for the state is estimated to be 3,359,000 tons, which is slightly above the yield of last year. Clover is averaging 1.15 tons per acre. The government places the yield for the United States at 88,600,000 tons, which is only 2,700,000 tons less than last year's production. Hay prices are expected to advance owing to the inability to secure cars to ship in.

WOOL MARKETS

The wool market continues practically unchanged in its stagnant condition, with almost no wool moving at least not enough to base fair quotations on, as most of what has changed hands has been at what amounts to forced sale, or else has been bought by those who had to have the wool to keep going. Prices are quoted "nominally" as high as 70c, still, but the practical top is 50c for the very best wools which have been sold.

All interests are keeping a sharp eye on the market, according to reports, however, and any indications of activity will be closely followed by all concerned, as the feeling is becoming more and more general that the present "dead" condition cannot continue indefinitely longer.

LIVE STOCK MARKETS

DETROIT—Cattle: Market steady at last week's close, but trade very slow; some going over unsold; best heavy steers, $12@13; best heavy steers, $9.50@10.50; mixed steers and heifers, $7.50@8.50; handy light butchers, $6.50@7.25; light butchers, $5.75@6.25; best cows, $8@8.25; butcher cows, $6@7; cutters, $4.75@5; canners, $4@4.50; best heavy bulls, $7.50@7.75; bologna bulls, $6@7; stock bulls, $5.50@5.75; feeders, $8@9; stockers, $6@8; milkers and springers, $70@140. Veal calves—Market very slow at last week's close; quality very common; heavy culls 50c to $1 lower best $18@18.50; others, $7@14. Sheep and lambs—Market 50c to 75c lower; common thin lambs very dull; almost unsalable; best lambs, $11@12; fair lambs, $9.50@11; light to common lambs, $6@8; fair to good sheep, $6@6.50; culls and common, $2@4. Hogs—Market slow; good mixed, $15.75@16; heavy, $15@15.50; pigs, $15@15.25; roughs, $12@12.75; stags, $8@10.

CHICAGO—Cattle: Light and handy weight steers steady to strong, top lightweight $17.50 best heavies and yearlings $17.25; bulk choice, $16.25@17.15; others steady, slow, average 25c lower; plain heavy cattle, very draggy, bulk good grades, $15@15.75; grassers mostly $9.50@14.50; good to best cows, $10@12.50; canners and cutters, $4.25@6.25; mostly steady; medium cows, $6.50@9.50; unevenly 25c lower; bulls 25c lower; spot 50c off; bologna mostly $6.25@7.50; veal calves mostly 25c lower, others 25 to 50c lower; bulk choice vealers, $14.75@15; selected lots, $13.25@15.50; stockers steady. Hogs: 10 to 15c higher, best closing steady to strong with Saturday's average; others steady to 10c lower; top, $16; bulk light and butchers, $15.25@15.85; bulk packing sows, $14.15@14.50; pigs strong; bulk desirable, kinds, $14.25@15; Sheep, killing classes, steady to 25c lower; top western lambs, $13; top native lambs, $12.75 buk $11@12.25; fat ewes, largely $7@7.25; good Montana wethers, bid, $7.75; feeding lambs steady, the bulk good and choice, $12@12.40.

THE PALMER BROTHERS' CASE

According to reliable sources, Alexander MacVittie, Tuscola county agent, has made public charges against the quality and method of selling, which the Palmer Brothers, Belding, have employed in disposing of Shorthorn bulls, which he claims they imported from Canada.

Several of our readers have written to us within the current week, asking if these charges were true. We had previously begun investigations, because we are determined to "play fair" in a matter of this kind. Under date of August 13th, Palmer Brothers, make the following statement to us:

"In the matter of the slanderous publicity recently given our business in the Michigan press, we wish to express our appreciation of your withholding judgment until you have given us an opportunity to show you our side of the case.

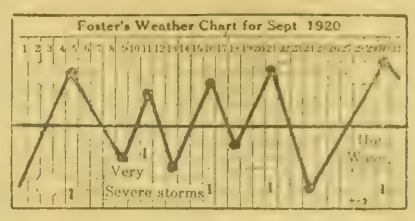
"My brother and myself were in Lansing yesterday to present our case to the extension department, but found them all in northern Michigan on institute work. It is our intention to take the matter up with them again Monday.

"Immediately thereafter we will be in a better position to go into the matter with you either by personal call or letter.

"We feel that when given a chance that we have as good a story as the other side."

THE WEATHER FOR THE WEEK

As Forecasted by W. T. Foster for The Michigan Business Farmer

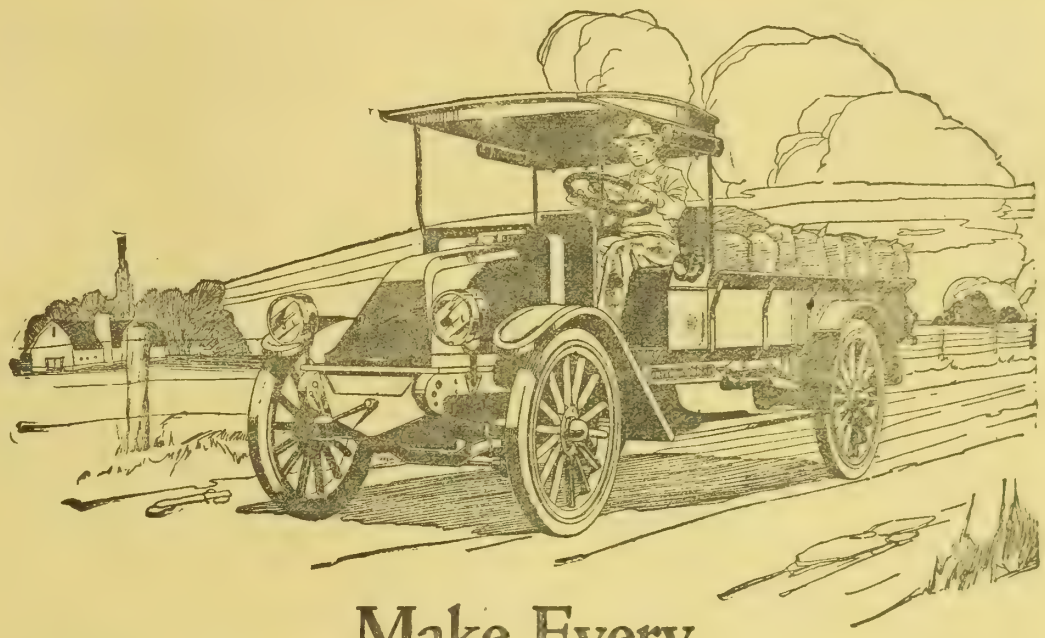


WASHINNGTON D. C. Aug. 21, 1920—Late great improvements in my forecasts will begin with the first of November next. Warm waves will reach Vancouver, B. C., near Aug. 26 and temperatures will rise on all the Pacific slope and over the middle and northern Rockies. Its center will move southeastward, reaching St. Louis on about 28. Its path will be by way of Salt Lake. It will continue southeast from St. Louis, reaching Atlanta about 29, then northeastward, reaching Ottawa and eastern sections about Aug. 30 or 331. Very warm weather will prevail along and south of this central path; cooler north of it.

The central part of the low or storm center will follow the warm wave path about one day behind and the cool wave center about two days behind. This disturbance will have greater than average force; will be larger than usual; more rain is expected from it than past averages of this summer. My forecasts have said that August would bring more rain than July.

I am expecting very destructive frosts in our northern states and the Canadian provinces east of Rockies' crest during the week centering on Sept. 11. Much of the corn crop is late and, as I see it, will be badly damaged. These frosts will also damage some of the late crops in Canada. I am expecting the most severe storms of the year immediately followed by a cold wave and killing frosts during that week.

W. T. Foster



Make Every Minute Pay Dividends

DURING these days of short working hours, high wages and unsettled labor conditions, every hour saved for essential work is money in your pocket. Every hour you spend on the road between your farm and town represents unproductive time. During your busy season someone is getting high wages for this time, or you personally are spending valuable time. Make every minute pay dividends. Reduce the number of hours spent on the road and increase the hours of productive farm work.

You can haul your farm products to town with an *International Motor Truck* and haul supplies back to the farm in about one-fourth of the time that would be required with a team and wagon—a road saving of 300%. Thereby you save, during the year, many hours for necessary farm work—hours and minutes that total into days. You save money in wages, or at least make the high wages that you are paying someone pay you greater returns.

International Motor Trucks are made in nine sizes, from ¾ ton to 3½ ton—a size and style for every hauling requirement. A letter or post-card to the address below will bring complete information descriptive of these low-cost hauling units that make every minute pay dividends.

"Hearts of Three"

By JACK LONDON

Author of the "Valley of the Moon," and other stories.

CHAPTER XXV.

IN THE meantime after the manner of cross purposes in New York, wherein Regan craftily proceeded with his gigantic raid on all Francis' holdings while Francis and Bascom vainly strove to find his identity, so in Panama were at work cross purposes which involved Leoncia and the Solanos, Torres and the Jefe, and, not least in importance, one, Yi Poon, the rotund and moon-faced Chinese.

The little old judge who was the Jefe's creature, sat asleep in court in San Antonio. He had slept placidly for two hours, occasionally nodding his head and muttering profoundly, although the case was a grave one, involving twenty years in San Juan, where the strongest could not survive ten years. But there was no need for the judge to consider evidence or argument. Before the case was called, decision and sentence were in his mind, having been put there by the Jefe. The prisoner's lawyer ceased his perfunctory argument, the clerk of the court sneezed and the judge woke up. He looked about him briskly and said:

"Guilty."

No one was surprised, not even the prisoner.

"Appear tomorrow morning for sentence.—Next case."

Having so ordered the judge prepared to settle down into another nap, when he saw Torres and the Jefe enter the courtroom. A gleam in the Jefe's eye was his cue, and he abruptly dismissed court for the day.

"I have been to Dodriguez Fernandez," the Jefe was explaining five minutes later in the empty courtroom "He says it was a natural gem, and that much would be lost in the cutting, but that nevertheless he would still give five hundred gold for it.—Show it to the judge, Senor Torres, and the rest of the handful of big ones."

And Torres began to lie. He had to lie, because he could not confess the shame of having had the gems taken away from him by the Solanos and the Morgans when they threw him out of the hacienda. And so convincingly did he lie that even the Jefe he convinced, while the judge, except in the matter of brands of strong liquor, accepted everything the Jefe wanted him to believe. In brief, shorn of the multitude of details that Torres threw in, his tale was that he was so certain of the jeweler's under-appraisal that he had despatched the gems by special messenger to his agent in Colon with instructions to forward to New York to Tiffany's for appraisement that might lead to sale.

As they emerged from the courtroom and descended the several steps that were flanked by single adobe pillars marred by bullet scars from previous revolutions, the Jefe was saying:

And so, needing the aegis of the law for our adventure after these gems, and, more than that, both of us loving our good friend the judge, we will let him in for a modest share of whatever we shall gain. He shall represent us in San Antonio while we are gone, and, if needs be, furnish us with the law's protection."

Now it happened that behind one of the pillars, hat pulled over his face Yi Poon half sat, half reclined Nor was he there by mere incident. Long ago he had learned that secrets of value, which always connoted the troubles of humans, were markedly prevalent around courtrooms, which were the local points for the airing of such troubles when they became acute. One could never tell. At any moment a secret might leap at one or brim over to one. Therefore it was like a fisherman casting his line into the sea for Yi Poon to watch the defendant and the plaintiff, the witnesses for and against, and even the court hanger-on or casual seeming onlooker.

So, on this morning, the one person of promise that Yi Poon had picked out was a ragged old peon who looked as if he had been drinking too much and yet would perish in his condition of reaction if he did not get another drink very immediately. Bleary-eyed he was, and red lidded, with desperate resolve painted on all his haggard withered lineaments. When the court room had emptied, he had taken up his stand outside on the steps close to a pillar.

And why? Yi Poon had asked himself. Inside remained only the three chief men of San Antonio—the Jefe, Torres and the judge. What connection between them, or any of them, and the drink-sodden creature that shook as if freezing in the blazing rays of the direct sun-rays? Yi Poon did not know, but he did know that it was worth while waiting on a chance, no matter how remote, of finding out. So, behind the piller, where no atom of shade protected him from the cooking sun which he detested, he lolled on the steps with all the impersonation of one placidly infatuated with sun baths. The old peon tottered a step, swayed as if about to fall, yet managed to deflect Torres from his companions, who paused to wait for him on the pavement a dozen paces on, restless and hot footed as if they stood on a grid, though deep in earnest conversation. And Yi Poon missed no word nor gesture, nor glint of eye nor shifting face line, of the dialogue that took place between the grand Torres and the wreck of a peon.

"What now?" Torres Demanded.

"Money, a little money, for the love of God, senor, a little money," the ancient peon whined.

"You have had your money," Torres snarled. "When I went away I gave you double the amount to last you twice as long. Not for two weeks yet is there a centavo due you."

"I am in debt," was the old man's whimper, the while all the flesh of him quivered and trembled from the nerve-ravishment of the drink so jalpably recently consumed.

"On the pulque slate at Peter and Paul's," Torres, with a sneer, diagnsed unerringly.

"On the pulque slate at Peter and Paul's," was the frank acknowledgement. "And the slate is full. No more pulque can I get credit for. I am wretched and suffer a thousand torments without my pulque."

"You are a pig creature without reason !"

A strange dignity, as of wisdom beyond wisdom, seemed suddenly to animate the old wreck as he straightened up, for the nonce ceased from trembling, and gravely said:

"I am old. There is no vigor left in the veins nor the heart of me. The desires of my youth are gone. Not even may I labor with this broken body of mine, though well I know that labor is an easement and a forgetting. Not even may I labor and forget. Food is a distaste in my mouth and a pain in my belly. Women—they are a pest that it is a vexation to remember even having desired. Children—I buried my last a dozen years gone. Religion—it frightens me. Death—I sleep with the terror of it. Pulque—ah, dear God ! the one tickle and taste of living left to me !

"What if I drink over much? It is because I have much to forget, and have but little space yet to linger in the sun, ere, the Darkness, for my old eyes, blots out the sun forever."

Impervious to the old man's philosophy, Torres made an impatient threat of movement that he was going.

"A few pesos, just a handful of pesos," the old peon pleaded.

"Not a centavo," Torres said with finality.

"Very well," said the old man with equal finality.

"What do you mean?" Torres rasped with swift suspicion.

"Have you forgotten?" was the retort, with such emphasis of significance as to make Yi Poon wonder for what reason Torres gave the peon what seemed a pension or an allowance.

"I pay you, according to agreement, to forget," said Torres.

"I shall never forget that my old eyes saw you stab Senor Alfaro Solano in the back," the peon replied.

Although he remained hidden and motionless in his posture of repose behind the pillar, Yi Poon metaphorically sat up. The Solanos were persons of place and wealth. That Torres should have murdered one of them was indeed a secret of price.

"Beast ! Pig without reason ! Animal of the dirt !" Torres' hands clenched in his rage. "Because I am kind do you treat me thus. One blabbling of your tongue and I will send you to San Juan. You know what that means. Not only will you sleep with the terror of death, but never for a moment of waking will you be free of the terror of living as you stare upon the buzzards that will surely and shortly peck your bones. And there will be no pulque in San Juan. There is never any pulque in San Juan for the men I send there. So? Eh? I thought so. You will wait two weeks for the proper time when I shall again give you money. If you do not wait, then never, this side of your interment in the bellies of buzzards, will you drink pulque again."

Torres whirled on his heel and was gone. Yi Poon watched him and his two companions go down the street, rounded the pillar to find the old peon sunk down in collapse at his disappointment of not getting any pulque, groaning and moaning and making sharp little yelping cries, his body quivering as dying animals quiver in the final throes, his fingers picking at his flesh and garments as if picking off centipedes. Down beside him sat Yi Poon, who began a remarkable performance of his own. Drawing gold coins and silver ones from his pockets he began to count over his money with chink and clink that was mellow and liquid and that to the distraught peon's ear was as the sound of the rippling and riffling of fountains of pulque.

"We are wise," Yi Poon told him in grandiloquent Spanish, still clinking the money, while the peon whined and yammered for the few centavos necessary for one drink of pulque. "We are wise, you and I, old man, and we will sit here and tell each other what we know about men and women, and life and love, and anger and sudden death, the rage red in the heart and the steel bitter cold in the back; and if you tell me what pleases me, then shall you drink pulque till your ears run out with it, and your eyes are drowned in it. You like that pulque, eh? You like one drink now, now, soon, very quick?"

The night, while the Jefe Politico and Torres organized their expedition under cover of the dark, was destined to be a momentous one in the Solano hacienda. Things began to happen early. Dinner over, drinking their coffee and smoking their cigarettes, the family, of which Henry was accounted one by virtue of his brotherhood to Leoncia, sat on the wide front veranda. Through the moonlight, up the steps, they saw a strange figure approach.

"It is like a ghost," said Alvarado Solano.

"A fat ghost," said Martinez his twine brother.

"A Chink ghost you couldn't poke your finger through," Ricardo laughed.

"The very Chink who saved Leoncia and me from marrying," said Henry Morgan with recognition.

"The seller of secrets," Leoncia gurgled. "And if he hasn't brought a new secret, I shall be disappointed."

"What do you want Chinaman?" Alesandro, the eldest of the Solano brothers demanded sharply.

"Nice new secret, very nice new secret maybe you buy," Yi Poon murmurer proudly.

"Your secrets are too expensive Chinaman," said Enrico discouragingly.

"This nice new secret very expensive," Yi Poon assured him complacently.

"Go away," old Enrico ordered.

"I shall live a long time, yet to the day of my death I care to hear no more secrets."

But Yi Poon was suavely certain of himself.

"One time you have very fine brother," he said. "One time your very fine brother, the Senor Alfaro. Solano, die with knife in his back. Very well. Some secret, eh?"

But Enrico was on his feet quivering.

"You know?" he almost screamed his eager interrogation.

"How much?" Yi Poon said.

"All I possess!" Enrico cried, ere turning to Alesandro to add: "You deal with him, son. Pay him well if he can prove by witness of the eye."

"You bet," quoth Yi Poon. "I got witness. He got good eye-sight. He see man stick knife in the Senor Alfaro's back in the dark. His name"

"Yes, yes," Enrico breathed his suspense.

"One thousand dollars his name," said Yi Poon hesitating to make up his mind to what kind of dollars he could dare to claim. "One thousand dollars gold," he concluded.

Enrico forgot that he had deputed the transaction to his eldest son.

"Where is your witness?" he shouted.

And Yi Poon calling softly down the steps into the shrubbery, evoked the pulque-ravaged peon, a real-looking ghost who slowly advanced and tottered up the steps.

At the same time, on the edge of town, twenty mounted men, among whom were the gendarmes, Rafael, Ignacio, Augustino and Vincente, herded a pack train of more than twenty mules and waited the command of the Jefe to depart on they knew not what mysterious adventure into the Cordilleras. What they did know was that, herded carefully apart from all other animals, was a strapping big mule loaded with two hundred and fifty pounds of dynamite. Also, they knew that the delay was due to Senor Torres, who had ridden away along the beach with the dreaded Caroo murderer, Jose Mancheno, who, only by the grace of God and of the Jefe Politico, had been kept for years from expiating on the scaffold his various offenses against life and law.

And, while Torres waited on the beach and held the Caroo's horse and an extra horse, the Caroo ascended on foot the winding road that led to the hacienda of the Solanos. Little did Torres guess that twenty feet away, in the jungle that encroached on the beach, lay a placid sleeping, pulque drunken, old peon, with, crouching beside him, a very alert a very sober Chinese with a recently acquired thousand dollars stowed under his belt. Yi Poon had had barely time to drag the peon into hiding when Torres rode along in the sand and stopped almost beside him.

Up at the hacienda all members of the household were going to bed. Leoncia just starting to let down her hair, stopped when she heard the rattle of tiny pebbles against her windows. Warning her in low whispers to make no noise, Jose Mancheno handed her a crumpled note which Torres had written, saying mysteriously:

"From a strange Chinaman who waits not a hundred feet away on the edge of the shrubbery."

And Leoncia read in execrable Spanish.

"First time I tell you secret about Henry Morgan. This time I have secret about Francis. You come along and talk with me now."

Leoncia's heart leaped at mention of Francis, and as she slipped on a mantle and accompanied the Caroo it never entered her head to doubt that Yi Poon was waiting for her.

And Yi Poon, down on the beach and spying upon Torres, had no doubts when he saw the Caroo murderer appear with the Solano senorita bound and gagged, slung across his shoulders like a sack of meal. Nor did Yo Poon have any doubts about his next action, when he saw Leoncia tied into the saddle of the spare horse and take away down the beach at a gallop, with Torres and the Caroo riding on either side of her. Leaving the pulque sodden peon to sleep, the fat Chinaman took the road up the hill at so stiff a pace that he arrived breathless at the hacienda. Not content with knocking at the

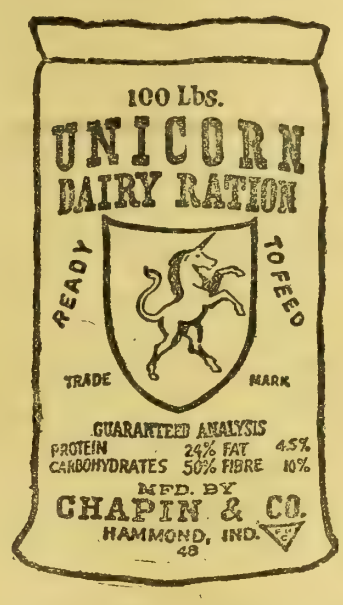
You Can't Compete With Machinery



"Better Sires—Better Stock"

We will award a money prize of $1,000 to the county that first eliminates its inferior sires.

This prize will be awarded under rules provided by the Bureau of Animal Industry, United States Department of Agriculture.

Detailed information on request.

Mixing feed on the farm is old fashioned, like threshing with a flail.

The modern time and money saving way is to have it done by machinery on a large scale.

In our mills we mix a ton of Unicorn Dairy Ration in one minute at a power cost of a few cents.

Labor is scarce and high priced. You can use yours more profitably on other work.

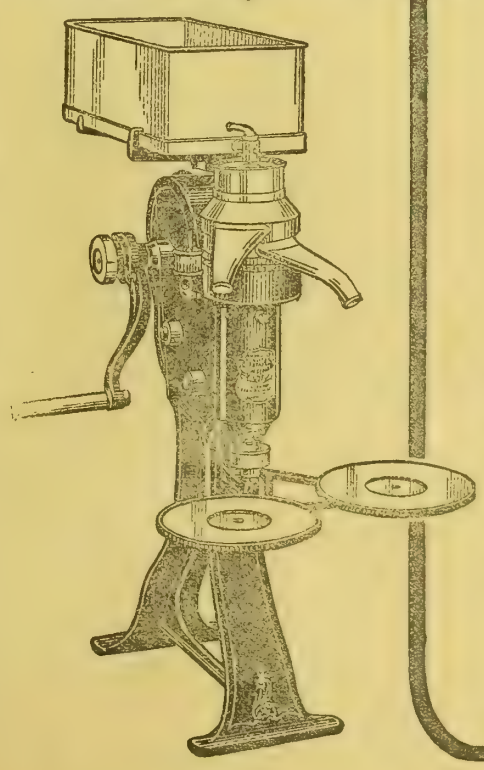
Unicorn requires no labor. Ready to feed, you get it as you need it. No worry or work of keeping on hand a supply of many different kinds of feed.

Made of the best feeds. Put together in the right way by men who have learned by experience.

Be wise. You can't compete with machinery. Lower your milk production cost by feeding Unicorn.

CHAPIN & COMPANY, Chicago

UNITED STATES CREAM SEPARATOR
WITH PERFECTED DISC BOWL



Perfection—

Is it too much to expect?

A machine may be said to have reached perfection when, through mechanical and engineering excellence, it renders a degree of service in money- and labor-saving never before attained.

Years ago, the United States Cream Separator reached the peak of perfection as a money saver, by winning in open competition the world's record for close separation—a record that still stands.

The perfecting of the United States Disc Bowl is the last big achievement in cream separator building. With this notable refinement, the labor-saving features of the United States challenge and welcome all comparisons.

Those who know the ease of operation, the simplicity of cleaning, say the United States represents perfection in the most important detail of milk handling.

Write for literature today—but be sure to have the United States dealer near you show the machine itself.

Unemployment

ONE OF the greatest possible afflictions that can come to a nation is wide-spread unemployment. Fortunately we have not had this condition to contend with in this country for a number of years, but there is no certainty that we shall entirely escape it. Six weeks ago the woolen mlls closed down, and threw ten thousand men out of work. Last week it is reported, automobile tire factories in Akron, O., reduced their working force, relieving 25,000 men of their jobs. Although the nation as a whole is suffering from a shortage of labor, it will be some time before these 35,000 men can secure other labor to which they are accustomed. In the meantime, their income has stopped. Probably a few have been saving and have a bank account to fall back upon. A large number, however, have probably lived from hand to mouth as is quite customary these days, and will be confronted for the first time in years with the problem of securing enough money to feed and clothe themselves and families.

Some have said that labor would be merely getting its just dues if it were obliged to beg for a job and a living. But we cannot take any such harsh view as that. We have no desire to see bread lines in this land of plenty and prosperity. The rank and file of the laboring people are honest. They return a dollar's worth of labor for each dollar received. With the cost of living where it is they are receiving no more than they must have to live comfortably. They are not to blame for the rash and uncompromising attitude that some of their leaders have assumed toward industry. Moreover, perhaps if we analyze that attitude it may not seem so unreasonable as many have supposed.

For years the laboring classes have earned barely enough to keep the wolf from the door. Yet when the cry has gone up from the depressed labor ranks that they were the victims of a capitalistic system, a good many employers of labor have answered it by saying that opportunity awaits every man to rise above the common herd and become a part and parcel of the very system condemned. That is foolish argument. True, such an opportunity exists, but if every man should suddenly acquire the capacity to arise to the opportunity, there would be no one left in the common herd and none to do the common labor, which if the wheels of the world continue to go around must be performed.

In considering the labor problem the man who has the capacity for advancement should be left entirely out of the reckoning. He is the exception. It is to the great mass of labor, —that army of plodders, large of body and small of brain, muscled to do heavy jobs but limited in mental equipment for finer work, content to leave the intricate jobs and their rewards to others more fitted to perform them, —it is to this type of labor to which the nation should give its sympathetic consideration. This type has always been with us and always will be with us. Our industrial fabric would be incomplete without it. Fix a standard schedule of working hours, a standard wage level that will enable these people to live comfortably and save a few hundred dollars a year and to enjoy their simple pursuits of pleasure the while; give them sufficient warranties against non-employment and cut in wages, and the labor problem will take care of itself.

As You Love Good Government

AS YOU LOVE good government begin today to examine the candidates who are seeking your votes at the primary election. Voting, to a good many people, is nothing but routine like eating and sleeping. Many people eat everything that is set before them without understanding or caring what effect it may have upon their physical bodies. Great bodies of voters go to the polls at each election and cast their votes without considering the consequences of their acts.

Most of the men whom the Republicans of Michigan nominate at the coming primary election will be charged with the duty of making and enforcing the laws for the next two years. The amount of taxes we will pay, the kind of laws under which we will live, the policies which will in some way affect our social and economic well being,—all will be determined by those whom you elect this fall. Let there be no mistake. Let no personal prejudices blind us to our duties as good citizens of Michigan and cause us to vote for men who may prove false to us after they are elected.

In many districts of Michigan the farmers have endorsed candidates for office. Such active participation in political contests is most commendable. We talk much about the ideal of the office seeking the man. And when groups of people arise to the full responsibilities of their citizenship and boldly pledge their combined strength to candidates whom they have sounded out, without any strings attached to their fealty, the nearer we will approach to that ideal. At the same time even these groups may make their mistakes. Men may be endorsed whom the rank and file cannot conscientiously vote for. It is, therefore, incumbent upon every individual to personally investigate the candidates and give their support to those most qualified to serve.

But do not misunderstand the meaning of the term "qualified." A man may be eminently qualified from the standpoint of education and technical preparation and yet be wholly unfit to represent the people by whom elected.

The qualifications for the legislator are not so exacting as some might think. Of first importance is the honesty of the candidate. It is not necessary for a man to stoop to such low traffic as horse-stealing, bootlegging, larceny, etc., to be dishonest. The man who would be moved by bribes of either money or political influence is just as dishonest and undesirable as the horse-thief. Courage is another essential in the selection of our legislators. Spare us from the week-kneed, namby-pamby fellow who follows the bell wether no matter where he may lead. A good education helps a great deal, but common sense is worth more. It is not necessary as many used to believe that a good lawmaker must be a good lawyer. The legal aspects of bills are threshed out in committees all of which access to the entire legal department of the state. A fair mind, an honest heart, a back-bone well lined with lime, and an understanding of the needs of his constituents should be the primary qualifications of the man who seeks public office. Think this over between now and the primary. Talk politics with your wife and with your neighbor. Take a real live interest in it, and when you go vote, you will cast your ballot with a new sense of pride and responsibility.

Take a Week Off

SAY, FARMER friend, why don't you take a day off? Pack up some grub, grab a few blankets, pile mother and the kids into the old flivver and hit the highway for the tall timber. Get far enough away so you can't hear the bleat of the calves when the hired man forgets to feed them. What's that? Too busy; can't get away? Oh, pshaw, what are you giving us? That's what you always say. Remember last year you took a day or two off, and when you got home the farm was right where you left it. Hadn't moved an inch, had it? And weren't you surprised to find that the crops had kept right on growing. An' nobody had carried away the fences nor cut down the apple orchard nor burned the barn nor tipped the corn crib over either. Don't you 'spose it would be safe to leave 'em again just for a few days? Don't you 'spose it would pay you and the folks to get away from the grind of farm work for a short spell and do nothing but loaf and fish. Take a week off. Drive up into the woods or plains of Northern Michigan, where lakes, rivers, bass, pickerel, trout, wild berries, an'—everything abounds. Forget the farm; take it easy; play with the children; make love to the wife;—for one solid week. Then come home. You'll find there's nothing like a good old-fashioned outing to put the farm folks in trim for the fall work.

What Is Preferred Stock?

WE HAVE learned a few interesting things since we announced the offering of a preferred interest in our own company here, in an issue two weeks ago.

In the first place it develops that there are a lot of good farmers, many of whom have a few hundred or perhaps a few thousand dollars which they are anxious to invest where it will bring them a little more than the savings bank's 4 per cent. and yet they do not understand the simple difference between Preferred and Common stock.

Preferred stock derives its name from the fact that it is always a prior claim over common stock, both as to dividends or priority in case of bankruptcy. It usually pays a fixed annual interest, which must be paid in full before the common stock pays any dividend. When it is "Cumulative," all back dividends must be paid before the common can derive any profits.

Common stock is usually the voting or active stock of the corporation, shares in all profits, but where a Preferred stock is issued, shares only after the fixed dividend on the Preferred stock has been paid in full. In case of bankruptcy, the Common stock shares in the assets of the defunct company, only after the Preferred stock claims have been settled in full.

Preferred is therefore considered a more conservative investment than common stock, because the rate of dividend is fixed in advance and its interest is prior to that of the common.

The interest or dividend rate is usually the barometer of any investment risk. One man buries his treasure and sleeps over it with a shot gun; he takes no risk, but he receives no interest. His money is loafing. Probably the safest investment in the world is a United States government bond, but they accordingly pay the lowest interest. An investor in oil stock may get 100 per cent a month, as they often have, but the chances are just about a hundred per cent against it. You can measure the safety of an investment pretty fairly by the returns promised.

Silos In Michigan

WE KNOW of one spot in Saginaw County where by following the line of vision completely around the horizon of that fertile prairie country one may count nineteen silos, some in groups of two or three beside the big red barns. Some day we want to take a panorama picture from that spot and when we do we shall publicly challenge these boosters from Wisconsin or New York (the two leading silo states) to duplicate or better it.

We are in great hopes and firmly believe that the 1920 census will show that Michigan leads in the number of these "silent sentinels of business farming" on her farms.

The State Constabulary is sending out a bunch of nice publicity to the country newspapers of the state in the hopes of quieting the opposition that is everywhere apparent.

What the Neighbors Say

THE "GERMAN LUTHERANS" AND THEIR "FOREIGN SCHOOLS"

While engaged in a little escapade through several rural districts of our state, a copy of your valued paper was brought to my attention. It was the number dated August 7th. In it I find a reply to ex-Governor Ferris signed by Jas. Hamilton, author of the proposed anti-parochial and private school amendment. As this article contains at least one misrepresentation, I feel justified in submitting a few facts for the protection of your readers.

Mr. Hamilton writes: "The German Lutherans have furnished more ministers that have been convicted for disloyal acts than all other denominations in the land, and they are the only religious denomination conducting foreign parochial schools that have taken the question into court to fight a legislative act when the legislature of Nebraska passed a law compelling elementary instruction to be in English."

It is—this your valued paper will not hesitate to concede—indeed a sad state of affairs when it becomes possible in our great state to present such a blatant misrepresentation of facts to intelligent people. Either Mr. Hamilton is ignorant or he is a malicious perverter of truth. To pen a hideous statement on paper is not difficult for individuals of Mr. Hamilton's calibre, but to follow up his assertions with proof is quite a different matter. Note, kind reader, e. g., that when he speaks of a Polish Roman Catholic school in Detroit "where not a word of English is spoken," he fails to substantiate his claim. Fact is that no such condition exists. But isn't it unfair, dishonest and un-American in the highest degree to deliberately lead an unsuspecting audience astray?

Then as to the "German Lutherans" and the "Foreign Schools." Why does Mr. Hamilton continue to call the Lutherans of this country the German Lutherans? If Mr. Hamilton has any knowledge of actual conditions, he will know that over 90 per cent of the religious work conducted by Lutherans in this country is conducted in the American language. Is it fair to place a church body which since the days of the Revolution and particularly during the recent world war has always and in every instance proven the loftiest type of patriotism for our country, under suspicion of being German, imperialistically German, in spirit? Does not history itself slap Hamilton in the face? Nor are the schools of the Lutherans "foreign" schools. The Lutheran parish school, kind reader, was born and bred on American soil. It has never had any connection with any foreign country. Does Mr. Hamilton know that the American Lutheran parochial school was founded in identically the same manner as other American church schools in the country? Does Mr. Hamilton know that from the founding of this nation up to the days of Horace Mann, who died in 1859, there was no such an institution as the public school? Episcopalians founded their own parish school; Presbyterians, Methodists, Baptists, Congregationalists and many other denominations founded their own parish schools. Even the higher schools of learning such as Harvard, Yale, the University of Chicago, also our own University at Ann Arbor were founded by such denominations. It was not until thousands of parents neglected to send their children to either a parochial or a private school that the state graciously and very wisely came to their assistance by providing a free state school, i. e., the public school. They have always paid taxes cheerfully for their upkeep and improvement. Lutherans even now send their children to the public school after they have in their own church school received an education and training in the nurture and admonition of the Lord. And though Mr. Hamilton may not know it, the rest of the hundred million inhabitants of this glorious country do know that as to true blue loyalty and patriotism the Lutheran parish school is absolutely beyond reproach. Lutherans believe that Daniel Webster was right when he said: "If we abide by the principles taught by the Bible, our country will go on prospering; but if we and our posterity neglect its instructions and authority, no man can tell how sudden a catastrophe may overwhelm us and bury all our glory in profound obscurity." Lutherans also believe that the fathers of our country were right when they established the complete separation of church and state and in the very first amendment to the constitution of our country declared not only that Congress shall make no law respecting the establishment of religion, but also added "nor prohibit the free exercise thereof."

Finally the statement that the "German Lutherans have furnished more ministers that have been convicted for disloyal acts than all other denominations in the land" convicts Mr. Hamilton of prevarications of the most hideous sort. If Mr. Hamilton does not know it, all the rest of the country does know that whatever "German" ministers were convicted for disloyal acts during the recent war were not Lutherans, but isolated members of the state church of Germany, wandering immigrants, with whom the Lutheran church which in this unhappy and unwarranted campaign is defending its magnificent system of congregational schools against a nefarious attack never has had the slightest degree of connection.

Place Mr. Hamilton with his ignorance and malice aside of such illustrious leaders as ex-Governor Ferris, Frank B. Leland, Congressman Doremus, ex-Congressman Denby, Milo D. Campbell, Supt. Cody, Dr. Hall, F. C. Martindale, Luren Dickinson, Horatio S. Earle, Mr. Kenney of our State Normal at Ypsilanti, State Superintendent of Public Instruction, H. E. Johnson, etc., etc., and you will have no difficulty in making the choice of American intelligence and fair play.—*Frederick Kolch, Highland Park, Mich.*

OSCODA DISTRICT

A. Mulholland is out for representative for the Oscoda district. He seems to be after the scalp of Rep. Irvin Chase now representing the district who voted to table the proposed warehouse bill and not submit it to the people. Evidently Mr. Chase could not trust the honesty of his own people with the balance of the voters of the state. It seems that he would sooner take his chances with the speculator, middleman and elevator man. What will the Oscoda farmers say when they ask him for their votes August 31st.

Mr. Mulholland is now supervisor of Richmond township, the largest township in the county. He held the office of register of deeds two terms, and is a good all around business man. He will be a credit to the interests of the farmers as well as all others.—*I. G., Reed City, Mich.*

Yes, Mr. Chase was one of those who couldn't trust the people, and we are surprised that he has any further political [illegible] Editor.

MR. ATWOOD'S RECORD

The farmers here are interested in the record of Mr. Atwood in the legislature. We want to know how he voted on bills. Will you please tell us through your valuable paper. It has come to the point where we farmers have got to have clean and honest men to do our business at the capitol, and if he has been loyal to us we want him, but otherwise we do not. There has been some talk about his voting against bills that were favorable to the farmer.—*K., S., Fremont, Mich.*

It is true that Mr. Atwood voted against submitting the warehouse amendment, although he as well as other "farmer" representatives, received many letters and petitions from his own people in favor of the proposal. It will be impossible to tell you how Mr. Atwood stood on many other important measures for the reason that he seems to have been strangely absent from his post when bills came up. Out of eighty odd days the legislature was in session Mr. Atwood was absent both with or without leave a total of twenty-eight days.—Editor.

REP. AARON MILES

In your good efforts to let the farmers know where the members of the last legislature stood don't neglect to tell them about the good work of Rep. Aaron (Paddy) Miles of Big Rapids. He was one of the few members of the House who was openly for the farmers' warehouse amendment and voted consistently against useless expenditures, salary increases, commissions, etc. The farmers of Michigan had no better friend in either branch of the legislature than Mr. Miles as an examination of his record will prove.—*One Who Was There.*

Since you mention it I recall that Sen. Baker once upon a time spoke in like terms of Mr. Miles. I am glad, indeed, to have this opportunity to present Mr. Miles' record and trust that the farmers of his district will not forget him.—Editor.

FARMER TEACHER SPEAKS FOR AMENDMENT

Good for you Jas. Hamilton! I hope every parochial school in the state for young children must close its doors. Are those schools educational? Are they teaching the Bible or their church creed? Should any church teach that their rules should be obeyed before the laws of the state?

Ten years ago I taught school in a German Lutheran community. One of my pupils thirteen years of age had been attending "church school" and his education had been so neglected that he could only take fourth grade work though he was bright and should have been doing seventh.

I asked him what grade he had been taking and he said "Oh, German and church doctrine." He said they must go two years before they would become a full church member. I can not see why the public schools are not enough or can not be made good enough for children sixteen or under where both schools exist generally all the improvements in the public schools must be fought for by the teacher and superintendent. They do not want their taxes any higher.

I can see no objection to reading the Bible (without comment) or repeating the Lord's Prayer in any public school. But no private school should receive any public state funds.

My husband is Catholic. We were married by a Judge. This spring he was very ill in St. Johns hospital, Springfield, Ill. The priest there called upon him and told him he could not receive him for confession or give him the last rites (if he should not live) of the church unless he got a special dispensation from the Bishop. Then our children must be baptised and reared in the Catholic church. That the church considered illegitimate where the parents were married other than by the priest. He also asked him if he would consider leaving me. Of course no church, priest or preacher matters, if we are fit for or ask God to receive us, but should any child under 16 years be taught by a church that puts their authority before the State? Should not every state see that all institutions recognize the laws of that state? Are not the marriage laws to be recognized by all institutions? Should any church be allowed to say illegitimate to any child born to lawfully married parents?

I enjoy the paper fine. I expect to be a Michigan Farm woman soon.—Mrs. E. C., Auburn, Ill.

DESTROYING WEEDS

Remarks noticed by Thompsonville subscriber in M. B. F. of Aug. 7th and will give you a case of the weed law as applied by the road commissioner of Deerfield township, Mecosta County. Mr. B. F. Anspaugh, seventy-one years old living all alone on one hundred acres of stump land had a field of rye that was about one third milk weed. His binder broke and the commissioner didn't wait for him to get repairs. Put a gang of men to cut the weeds and destroyed his rye. Mr. Anspaugh's house burned with contents and grain at threshing time last year. His last year's taxes are not paid. He will have about sixty dollars cost of cutting the weeds with this year's tax. Land can be used for pasture and ranch land. If the weed law is put in force it will go back to the state for taxes and is worth more to cut the weeds than the land will earn.—*J. and G. G., Mecosta County, Mich.*

No doubt the case you mention is an [illegible] facts are as you describe them the highway commissioner exceeded his authority.—Editor.

RELIGIOUS INSTRUCTION IN OUR SCHOOLS

(Continued on page 15)

The Week's Editorial

KEEP OUT OF POLITICS?

"Keep out of politics" is a warning given constantly to young men who show an inclination to interest themselves in public affairs. The civic standard is low in any community where a reputable citizen who seeks office encounters suspicion, reproach, or obloquy. The full powers confided to the people presupposes the participation of all citizens in the business of government.

Every citizen is "in" politics. The Constitution of the United States puts him there, and his conscience grants no exemptions.

I have heard men boast that they never perform jury service or that they have a "pull" that gains them some other immunity. A corruptible public official finds his job unprofitable unless he is able to enter into partnership with another bad citizen.

If I am more concerned with my privileges and immunities than with my duties, I am skidding; I am on the way to becoming a bad citizen. If I neglect to vote because it is inconvenient to meet that obligation, or I assume that my neighbors will protect me with their ballots, I am a dodger and a slacker.

Blind confidence in government by good luck is bound to bring disaster. The constant vigilance and intelligent action of all the people is essential to enlightened, capable government.

Am I a good citizen? Is the first question in the American catchism. Government is a complex business, but citizenship may be reduced to three essentials; understanding, loyalty and service.

This morning I saw a boy scout walk to the middle of the street, pick up a piece of paper and deposit it in the litter-box at the next corner. He didn't have to do that; it was my business quite as much as his. That lad exemplified the good citizenship that is always on the job.

In the rebuilding of the wall of Jerusalem, every man labored "over against his house." In like manner, an American citizen's duty to his country is immediate and personal, and lies at his own door.

When I say to myself, "I hold an inalienable partnership in this nation; its prosperity and happiness rest with me," then I have caught the spirit of true Americanism. Then indeed I am a worthy citizen of this mighty republic and a contributor to the forces that make for its perpetuity.—*Meredith Nicholson.*

The Farm Home
A Department for the Women

"How I Made Threshing Day Work Lighter"

Great Interest Shown in Thresh Day Question

THE WOMEN readers of The Business Farmer are showing that they are just as willing as the men to help make our paper bigger and better by the fine letters received in answer to my request and offer of prizes for letters on "How I Made Threshing Day Work Lighter." Letters are coming in every mail and from all parts of the state. More letters and the names of the prize winners will be published next week.

In "The Question Box" on our page you will find our prize question for this week. The reader who sent in this question will receive our check for $1. Other questions received and published in that box will be paid for at this rate. Send me questions regarding problems that are troubling you and let our big family thresh them out for you. Prizes of $2 and $1 will be awarded for the best and second best letters on this week's question.—CLARE NORRIS.

Gets Things Ready Day Before

In answer to your question in M. B. F., "How to Make Thresh Day Work Lighter," I will tell you how I manage it.

I get my table ready in the dining room the day before, extend it large enough for the number of persons expected, if possible. If one table is not large enough, I use two smaller ones to seat eight or nine persons each. It is better to have plenty of table room, for sometimes extra help happen along unexpected and if two or three extra places are planned for none of the men have to wait. I spread the table cloth on the tables and fill sugar bowls, salt and pepper shakers for each, and if I have plenty of dishes to set the tables in full I do it and if not set them as far as the dishes will go and when the table is prepared a clean sheet may be thrown over it and the dust will not settle on the dishes.

Another way to save washing is to use a white oil cloth. If one has the two tables for the family use enough oil cloth can be bought for both and it can be used to good advantage around the kitchen afterward if not used on the dining room table. If one large table is used the oil cloth can be kept from year to year, roll it on a broom handle, tie it in three places. It can then be stood in a clothes closet any place and not injured. Thresh day is a hard day on linen as many times it gets badly stained and at best is hard to wash.

If one has not enough chairs to seat all the help select strong boards which may be used at the sides of the tables place a chair at each corner of the table and lay the boards on them, pillows may then be laid on the boards and make comfortable seats, the chairs may then be used around the ends of the tables.

Another thing that causes a lot of confusion Thresh Day is dishes for the men to wash in. I use one or two tubs which may be arranged on a bench outside. About 20 minutes before dinner or supper fill them half full of warm water. I use about three roller towels to each tub depending on the crowd. A cake of soap may be dissolved and pour in enough of the soap in each tub to make a good suds. It will eliminate a lot of the waste of soap by forgetting the cake of soap in the dish of water.

If thresh day comes before the potatoes are dug I get them the day before carrots and beets may be pulled and topped and put in a cool place until needed. Beet pickles may be made two or three days ahead for thresh day and are much better.

I have made a batch of cookies and doughnuts a day or two before, in case the mill crew should happen along for supper unexpected as is sometimes the case, with the aid of home canned vegetables and a little baking done ahead a good meal may be served on short notice.

I prepare enough pie crust the day before and put it in the ice box until needed in the morning. Pies baked the day before are not as good the bottom crust soaks the juice.

For supper I bake a couple of cakes for a variety, but as a rule men do not care so much for cake, it is too dry. I find that chocolate eclairs although quite a lot of work, are relished by the men more than cake. I will send any one who writes me the directions and recipe for making eclairs. Here is the menus for dinner and supper I served last thresh day:

Dinner—Mashed potatoes, beef stew, cabbage salad, beets seasoned with butter and pepper and salt, cucumber pickles, bread and butter, pumpkin pie, cake, tea and coffee.

Supper—Boiled potatoes, home baked pork and beans, creamed carrots, sliced cucumbers, preserved crabapples, home made buns, eclairs, coffee, cake left from dinner.

I have three small children and with these preparations before thresh day I can serve 18 or 20 hungry threshers dinner and supper and not be overtired. In case the men with the mill might be at the house over night, I roll a winter blanket and comfort together for each two men for some of the women may be like myself, short of room in the house for extra people to sleep. The rolls can be quickly handed to them and they can make beds in the hay and one does not have to stop to hunt bedding. — *Mrs. W. H., Cheboygan* County.

Serves Fish or Roast Beef

I saw you request letters on "How I Made Threshing Day Work Lighter," and I decided to take a hand in that question as I find that while I may not make it as easy as some of my farmer sisters, I know that I do not have such a hard day of it as some of my neighbors who seem to need 4 or 5 extra women to help out at that time.

Now first, usually you do not know the exact time the machine will be at your place. But the machine is in your midst and coming toward your place, so I bake my bread at least a day before they can arrive. I also bake a double batch of cookies or fried cakes or a dark cake (for that will keep moist) the day I bake the bread. I see that my beets and cucumber pickles are made soon enough to be real good by that day. I plan two kinds of vegetables besides potatoes, these vegetables are whatever are in season, sweet corn and cabbage, salad string beans, tomatoes, cucumbers or whatever the garden provides. For the breakfast I like warmed potatoes, bacon and eggs and buns, breakfast food, coffee and fried cakes or cookies, its easily prepared and the wife can easily prepare and serve the meal alone. I prefer fresh fish or fresh roast beef for dinner and the roast, be it oven or pot roast makes a nice gravy for the potatoes.

By having the bread, dark cake and cookies or fried cakes made a day or so ahead, I make my pies the day the machine comes. We usually have the threshers one day so I plan for 3 meals and make out my menu for each meal and with the help of one woman who can assist and who knows how to do things, I get thru the day without any fuss or worry. I think every farm wife should figure on more men than just enough. Have plenty of what you cook. Its hard work to thresh and the men are kept busy every minute and get hungry, so serve them all they want to eat and have plenty left for the neighbor children who seem to think threshing is next to a circus and also plenty for the farmer or two who might call to see when the machine would be in their neighborhood. Invite them in to eat at the second table where the farmer's wife and the good man of the house eat and can have a little visit with this distant neighbor or neighbors and that little visit will make threshing day easier work and make your distant neighbor feel that you are not living just for the almighty dollar.

Do not forget to pay the lady who assists you that day, liberally, unless you have or will assist her to make threshing day lighter work at her home. — *Mrs. H. F. B., Cheboygan* County.

Put Everything on Table Before Men Sit Down to Eat

A few days before I expect thresners I bake cookies, fruit cake and make doughnuts, all of which are improved by being made a few days before using. I also bake pie shells for lemon pies, or any kind I want to make that require a crust baked separate. I also boil beets for pickles and have them in cans ready to use. Then the day before they come I bake sufficient bread to last while they are here and as I usually have cabbage salad, I also prepare the mayonnaise dressing on that day. Have your dining room table ready by putting in all the extra leaves, and set it all complete except the eatables. The next morning as soon as my morning work is done I get the potatoes cleaned and ready for the kettle, slice the meat which I fry in two large dripping pans in the oven. I usually avoid having sauce or anything that makes extra dish washing. Put the cups at each plate and pour tea or coffee from a large pitcher. Pie and everything is put on the table at once to save extra steps. Cook enough potatoes at noon that you can make potato salad for supper and as you wash your dishes put them back on the table and it is ready for the next meal. Have plenty of hot water and gold dust and dishes are soon out of the way. The men fill two tubs with water, put on a bench in the shade, saves much dirt in the house.

Follow my rules and "Threshing Day" will no longer be a bugbear.—*Ms. I., Armada, Mich.*

Telephone Great Help

I think the rural telephone a great help to the farm woman at threshing time. In that way you know about what time to expect the threshers and get an idea about what meal or meals you are to have them. Last year I prepared the following dinner alone: stewed chicken, baking powder biscuits with plenty of gravy, potatoes, one vegetable, whatever is in season, bread and butter, pickles, mince and apple pie, a generous plate of cheese, coffee and water for those who wish. I plan on plenty of everything and everything well cooked and palatable and also to have everything ready to put on the table when they come in.—*Mrs. M. E., Kent County.*

The Question Box

How can a woman be contented with a man who has neglected to develop his social nature and has no time for culture and refinement? What can she do to get him to mingle with other people of good taste? —A Reader.

Simple But Wholesome Meal

If I am to have threshers for dinner I usually serve potatoes, meat, one vegetable, pickles and pie. I usually peel potatoes the evening before and cover them well with water and then I cook the vegetables the day before and set on ice. I have the pie crusts made and usually use a one crust pie so that I can just stir up the filling and fill in the morning. The meat could be roast pork or stew. Cook the day before and warm just before eating.

If frying meat one has everything else along so nicely that about all there is left to do is to fry the meat. And for supper I serve fried potatoes, cold meat, cold cabbage salad or cold sliced cucumbers, cake, sauce or substitute potato salad for fried potatoes. Some of the threshers like one kind of cake and some another. So I stir a white cake batter up and turn half in a cake tin to bake and the other half I put in a little spice or even a taste of molasses, for icing I get the pulverized sugar and just stir up with milk and put it on as it is on the cake or 1-2 of the mixture and in the other half I add a little cocoa and put on the light cake. By this way I stir 2 cakes of one batter and 2 icings of one mixture. This makes threshing time very much lighter on the housewife.—*Mrs. W. I. D., Freeland, Mich.*

Bakes Pies and Cakes In Morning

You asked for ideas on making threshing day as easy a day as possible for the farm wife. Will give you my opinion on it by stating how I manage it. To begin with, I bought a ham which could be kept for some days in case of delays. The day before the threshers were to be at our place I boiled the ham while I cooked my days meals. Then during the day in my leisure I pared potatoes and left them stand for next morning. Also prepared what vegetables I intended to use. I managed to bake bread one or two days ahead so as not to have that on hand for that day. Then early the next morning while my range was heated from getting breakfast I baked my pies and cake. If one prefers cookies instead of cake they can be baked several days ahead. While my pies were in the oven I set my table and cooked the vegetables and kept them warm on the range. So all I had to prepare at the last moment was potatoes and gravy. Coffee or tea whichever is to be made I find it easier to have everything on the table when the men take their places then to wait and then scramble to place things on the table when they are seated. So you see I had most of my work done real early and had a rest of several hours on our nice shady porch besides. If one has them for several meals the work can be planned so as to be only half as hard by a little careful thinking.—*C. M., Bellevue, Michigan.*

Garden and Cows Supply Most Needs

As we are in moderate circumstances I cannot have as elaborate meals for threshers as some folks do, but I try to have everything as good as possible, and have plenty of it.

My menu for dinner was, mashed potatoes, meat loaf, brown gravy, baked beans, cabbage salad, pickled beets, pickled cucumbers, chocolate cake, coffee, bread, butter, brown bread with raisins in it, apple pie, cheese.

I made the meat loaf, bread, cake, brown bread and baked the beans the day before.

The evening before I pared the apples for pies. Early next morning I baked the pies and pared plenty of potatoes and made the salad. The rest of the dinner was finished very easily without any rushing.

We fed twelve threshers besides our own family of eight. We bought nothing but coffee, cheese and meat, as we have a good garden, also plenty of milk and butter.—*Mrs. G., Alma.*

Merriman Writes Business Farmer a Letter

MR. FORREST LORD, Editor of THE BUSINESS FARMER: As you have devoted considerable space to criticising the men who voted against the warehouse resolution, will you please print the proposed resolution, and answer the following questions?

First. How many men would be required to operate $5,000,000 worth of warehouses, working as state employes usually do? And what would their salaries amount to?

Second. How much money would be required to operate them, beside paying salaries?

Third. Would it increase our taxes, and how much?

Fourth. Are our taxes high enough now?

More than a year ago you sent out a call for money to defray the expense of preparing and circulating petitions to submit the question to the people.

If the people were as anxious as you claim about this matter, they must have sent in a lot of money.

How much money was collected?

Who has the money?

And why was it not used for the purpose it was collected for?

Very truly yours.—*Joel C. Merriman, Deckerville, Mich.*

I am pleased to accommodate you, Mr. Merriman. In the first place you are mistaken about THE BUSINESS FARMER sending out a call for money to defray the expense of circulating petitions. We will pay to any Sanilac county charitable organization the sum of $50 upon receipt of proof that THE BUSINESS FARMER did make such a call. If you fail to produce the proof you convict yourself of slander against this publication for insinuating that money collected from our subscribers was diverted to our own uses.

The Warehouse Amendment

'Resolved by the Senate and House of Representatives of the State of Michigan, That the following amendment to article 10 of the constitution by adding thereto a new section to be known and designated as section ten-a of said article ten, **authorizing** the state to borrow money to be used for the construction and operation of terminal warehouses within the State, and to issue bonds therefor, is hereby proposed, agreed to and submitted to the people of this State:

"Sec. 10a. The state **may borrow** not to exceed five million dollars for the construction of terminal warehouses in the cities of the State and **may operate** the same for the reception, storage and sale of foodstuffs grown in the state and consigned thereto by the producers thereof or by co-operative associations of such producers and pledge its credit, and issue bonds therefor on such terms **as shall be provided by law.**

Your questions about the working out of this amendment hardly do justice to a seasoned legislator. It is presumed that before you voted against submitting this amendment to the people you make investigations into the state-owned elevators and warehouses of Louisiana, the state-owned elevators of North Dakota, the municipally owned elevator in Seattle and many other publicly-owned terminal marketing facilities that are in successful operation in this and foreign countries. What was the result of your investigations? We would like to tell our readers about them. If you did not make any investigations why did you vote against the amendment. Was it your habit during the last session of the legislature to vote for or against measures without knowing something about them? Do you confess that you were nothing more than a figure-head during your tenure of office?

The writer was not a member of the last legislature. Therefore, he is not supposed to know what steps the legislature might have taken to carry out the provisions of this amendment. But his common sense tells him that it was the idea of the proponents of this measure that the terminal warehouses should be self-supporting. People who put their goods in private storage have to pay for it. Why should we expect the state to perform the same service without charge? The fathers of the amendment intended that the state should supply its credit to build the warehouses and a central management. The expense of operating the warehouses would be cared for by its patrons. In Louisiana the state-owned terminal facilities have not cost the state a penny. Why should they in Michigan?

Are our taxes high enough now? Yes, they are too high. Who authorizes the expenditure of money that makes state taxes necessary? The legislature, does it not? The last legislature was a notorious spend-thrift. It created commissions, and appropriated funds without rhyme or reason. You were a member of that legislature. I have your record before me.

You voted to submit the $50,000,000 road bonding proposition to the people. Did you find out how many extra people the State Highway Department would have to employ to carry out this road building program? What about their salaries? How much of this $50,000,000 will be spent in administration and how much in actual road building? I'll wager that you cannot answer and yet you voted for it.

You voted for the Michigan State Constabulary and an annual appropriation of over $370,000. You even voted against an amendment that would limit the life of the Constabulary to two years. If you are such a strict economist why did you vote to perpetuate such a large tax burden?

You voted to submit the resolution authorizing an increase in the salaries of circuit judges during the period for which they were elected.

You voted for the bill to legalize prize-fighting and to create a boxing commission. This bill carried an appropriation of several thousand dollars. I suppose that before you voted for this you satisfied yourself as to how the appropriation would be spent and how the people of your district would be benefitted. If not, feel free to use these columns for the purpose.

You voted to create a State Park Commission, with appropriations for the two years 1919-20 of $150,000.

You voted for the Community Council bill also creating a commission and appropriating money.

In carefully scrutinizing your record I fail to find a single instance where yo uvoted against an appropriation bill or a commission. The farmers' warehouse amendment was the sole exception. If there was one tell us about it and we will pass the information on to our readers, for above all things we intend to be fair.

As a matter of fact, Mr. Merriman, you are merely floundering about like a fish out of water looking for some kind of an excuse for voting against the farmers' warehouse amendment. And you cannot find one that will satisfy your constituents. You know that the amendment was merely an enabling act. The resolution plainly says that the amendment would "authorize" the state. There is nothing said about "requiring," "ordering" or "instructing" the state to build warehouses. The resolution says the state "may borrow" and the state "may operate," not "shall" or "must." The concluding words of the resolution says that the bonds shall be issued "as shall be provided by law." The amendment merely proposed to remove the limitations against the state engaging in enterprise, and enable the legislature at its own discretion to sell bonds, build and operate warehouses, etc. But if the legislature should find after an investigation and experimentation on a small scale that public owned warehouses could not be operated with advantage to both consumer and producer, it would certainly never think of spending the entire $5,000,000 just because the taxpayers said it might.

RELIGIOUS INSTRUCTION IN OUR SCHOOLS

(Continued from Page 13)

strong language in giving expression to their views, especially is this observable in some of the articles relating to the proposed amendment to our law in the matter of school attendance. The excellent school system of Michigan aims to fit its boys and girls for the responsible duties of good citizens and the taxpayer is properly required to provide the financial means, and this is wise as good reasoning tells us that it is much wiser and also more economical to educate for good citizenship than it is to correct and punish the ignorant citizen who violates the law.

When we speak of education it is well to recognize that the "school of life" provides for us the most valuable lessons which come to us. A wise instructor has offered the following as a proper definition of the word "education"—"an education consists in the high and full development of all of the powers and faculties of our being." And this should be the earnest purpose of every one who reaches the years of accountability. While it may be wise to separate "church and state" some religious instruction in our public school should and would prove the "dynamic" for the making of good and useful citizens. —*J. T. Daniells, Clinton County.*

EGG PRODUCTION INCREASES

In a North Carolina experiment, breeding a flock of hens to a high production male resulted in a 54 per cent greater egg yield in the next generation. The flock of common hens laid 88 eggs per hen per year. The second generation laid an average of 136 eggs in a year.

THE SIGN OF ROWENA QUALITY

Lily White

"The Flour the Best Cooks Use"

Is Sure to Please You

It is milled to meet all the requirements of quality, and yet it sells for only a little more than ordinary flour.

The quality of the flour comes out in the baking. How it bakes, the flavor, the color, the nutriment, all depend upon the selection of wheat and the processes of milling.

LILY WHITE is made from the choicest wheat grown in this country—not too hard, nor too soft, but just right for perfect balance. Only the "goodies" of the kernel are milled. The wheat is cleaned four times, scoured three times, and actually washed once before going into the rolls for the first break. The result is a flour of superfine texture, of perfect uniformity of granulation, of a most palatable flavor, of unsurpassed color.

Look for the ROWENA trade-mark on the sack

Everything baked from LILY WHITE is light, tender, delicious. It is an all-around flour. Countless thousands of women are enjoying reputations won from baking wonderful bread, rolls, biscuits and pastry from this high-grade flour.

Try LILLY WHITE—Results will convince you. Satisfaction is guaranteed. Ask for LILY WHITE at your dealer's.

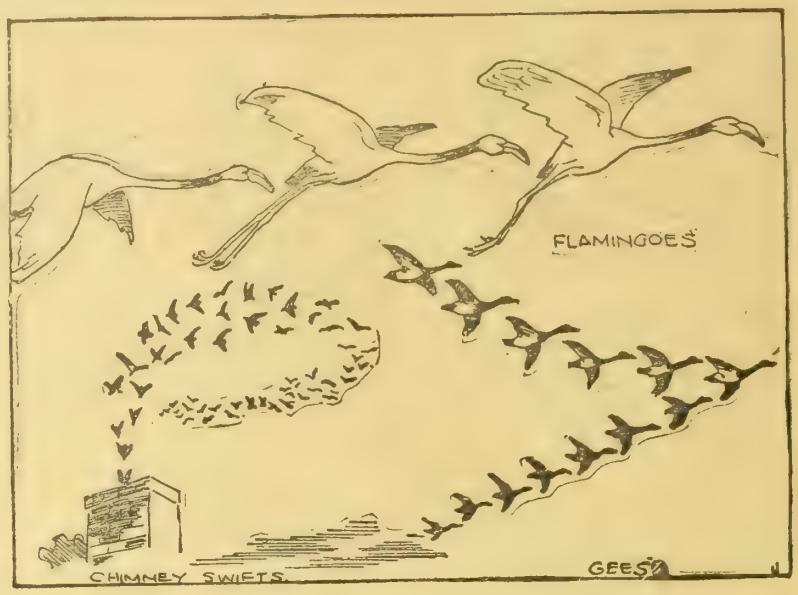
"Millers for Sixty Years"

The Children's Hour

DEAR CHILDREN: Well here it is nearly fair time. Most every day this coming month, somewhere in Michigan, farmer boys and girls will be getting up extra early, and the boys will help their fathers do the chores while the girls help their mothers fill a great big basket with lots of good things to eat. Then they will all get their best clothes on, the boys and fathers will hitch the horses to the double buggy, and they'll all get into the buggy and away they will go to spend the whole day at the fair. The boys and girls will ride on the merry-go-round, go up on the ferris wheel, go around and see the exhibits, go to some of the shows, maybe, eat peanuts and candy and drink lemonade, and at dinner-time they will get their big basket and spread a blanket down under some shady tree, set all their good things out on a tablecloth spread over the blanket and then eat so much it seems as if you couldn't eat any more. In the afternoon they will have another good time and start home so to get there just before dark. The boys and girls will be so tired and sleepy that they will think they never want to go to the fair again, but when they get up the next morning, I'll bet they will want to go again that day. I always felt that way when I was little and lived on a farm.

Will you all write some day this coming month and tell me about the time you have at your fair.

One of our girls, who lives in Brown City, wants to know how many subscriptions it will take to get a camera and a wrist watch, if she gets old subscribers to re-sign. We do not give premiums for getting old subscribers to renew. Affectionately yours—AUNT CLARE.



How to Tell Birds by Their Flight

(By Francis Rolt-Wheeler)

BOOKS will tell you a lot about the markings of birds, the exact differences between various kinds of hawks, for example. But how often does one really get sufficiently close to a bird to be sure? A fellow who knows the woods ought to be able to tell most of the birds by the way they fly, for there is as much difference between the burst of a partridge and the slow flapping of a crow, as there is between the jump of a scared jack rabbit and the go-as-you-please amble of a skunk.

Some troops of birds are easy to tell. Swans fly in the form of a V with the sides equal. Ducks in a V with the sides unequal. Grey Geese in a series of small V's, Cranes in the shape of a W, Black Brant in a line side by side, shags in a curving line like the letter S, and Flamingoes in a straight line, beak to tail.

The individual style of flight of a bird depends not a little on the shape of the wing, as well as its size and the weight of the body which has to be lifted. The Humming-bird's flight is like that of an insect, in sudden darts and poises, while the huge Albatross swings up and down like the waves of the sea. The Grouse speeds like a bullet, the Swallow skims. At a distance, Swallow and Martin might be mistaken for each other but their flight is quite distinct. A flash of red in the trees may betoken either a Cardinal or a Tanager, but the first glimpse of the flying bird tells the difference. The bumpy flight of the Finch family is quite characteristic, as is also the snappy jerk of a Flycatcher going after an insect contrasted with the swoop of the Swallow. It is as important to know a bird by the way he flies as by the color of his feathers.

OUR BOYS AND GIRLS

Dear Aunt Clare:—I just finished reading the letters from the boys and girls and I thought I would write too. I am 12 years old and in the seventh grade. I have brown eyes and I weigh 77 pounds. I live on an 80 acre farm. We have five horses and eight cows. For pets we have a dog and 10 rabbits.—Ellen Dean, Bad Axe, Michigan.

Dear Aunt Clare—I have written to you before but my letter was not in print. I am a girl 9 years old and will be in the 4th grade at school. Today is my father's birthday, so I made him a cake. I live on a 60 acre farm. I have one sister. We have a new Ford car. Helen Freeman, Owosso, Mich.

Dear Aunt Clare—We take the M. B. F. and like it very much. I live on a forty acre farm. We have two horses, two cows, one calf, nine pigs 25 chickens. For pets I have a large white cat. I wish some of the girls would write to me. I hope to see my letter in print. Agnes Beeckman, Hampton, Mich.

Dear Aunt Clare—As I have never written to you I will try now. I am a girl 12 years old and am in the eighth grade. I live on a farm of eighty acres. We have 4 horses 5 cows and 19 pigs. Papa takes the M. B. F. and likes it fine. I have five sisters and four brothers. We have a Buick car. Hoping to see my letter in print I will close Beatrice Putnam, Caro, Mich.

Dear Aunt Clare—This is the first time I have written you. I am a girl ten years old and in the 4th grade. I live on a farm of 200 acres. I like to read the letters of the children's hour. My father takes the M.B.F. and likes it very much. I have two pets, a pet lamb and a cat. I have three sisters and five brothers. I hope to see my letter in print. Mary Thelen, Fowler Mich., R. 3.

Dear Aunt Clare:—This is the first time I have written to you. I am a girl thirteen years old and will be in the seventh grade next year. My teacher's name will be Miss Olive Ernest. For pets I have a dog, a cat and a rabbit. I live on a farm of one hundred and [illegible]. We have two horses and [illegible] five pigs, about [illegible] and fifty young chickens. We have lots of little rabbits [illegible] pretty wild.—Mildred Oswalt, Tower, Michigan.

Dear Aunt Clare:—I am a girl 12 years old and am in the 7th grade at school. I like to go to school. Teacher's name is Miss Cranston. I will tell you about one day when I took a stroll into the woods. It was when the lilies and violets were in bloom. We were invited out to dinner and we all went out into the woods. We went over to Lost Lake and this lake had big pine trees all around it and we found some of the prettiest lady slippers and then we came to a little stream and we got a drink. We had a dandy time. Papa has his grain all cut. My father takes the M. B. F. and he likes it very much. I wish some of the boys and girls would write to me.—Agnes Petersen, Rodney, Michigan, R. 2.

Dear Aunt Clare:—I am a little girl 12 years old and will be in the seventh grade when school starts. I have been helping my mother in the house this summer. I have two pet lambs and a dog, also a tiger cat. I wish some of the girls would write to me. I would answer all their letters. I am sending a drawing and hope to receive a prize.—Marien Wiles, Adrian, R. 6.

Dear Aunt Clare—This is the second time I have wrote to you. I have two brothers and one sister, Russel, Clarence and Beulah. I am 10 years old. Have brown hair, blue eyes. I weigh about 56 pounds. I will close for this time hoping to see my letter in print I will close. Arvilla Davis, Clare Mich.

Dear Aunt Clare—This is the first time I have written to you. I am 13 13 years old and will be in the ninth grade when school begins. I have one sister and one brother. For pets we have two kittens and a pup. He takes the kittens by the neck and throws them around but they seem to like it. Well I will close, hoping to see my letter in print. Elsie Muscott, Breckenridge Mich.

Dear Aunt Clare—This is the first time I have written to you. I am 13 years old and in the ninth grade next year. I live on a farm of 80 acres. I have two sisters. I would like to know how many subscriptions it would take for a camera and a wrist watch and have old subscribers re-sign. I would like some of the girls to write to me. I will close, hoping to see my letter in print. Violet Wietshere, Brown City, Mich.

Dear Aunt Clare—This is the second time I have written to you. I am 10 years of age. I weigh 82 pounds. I have two brothers and five sisters. I live on a 75 acre farm. I hope to see my letter in print. Anna C. Schoof, Falmouth, Mich.

Dear Aunt Clare:—I thought I would write you a letter. I am 10 years old and in the fifth grade. I have one brother and three sisters. Do we get a prize for drawing? My mother is dead, she has been dead almost two years. She died on Thanksgiving day. We have two horses, three cows, three pigs and about 50 chickens. We have a car. I will close with a short poem,

The Smallest Girl

I never spoke before today
The smallest girl am I,
And as I have not much to say
I'll only say good-bye.
—Margaret Michels, Buckley, Mich.

Dear Aunt Clare:—I have just finished reading the boys' and girls' stories and thought I would write one, too. I am 11 years old and in the sixth grade. I have one mile to go to school. I have one brother and one sister. We enjoy the M. B. F. Here is my story:

One day as my father and I were cocking hay in our orchard I saw a birds' nest in a tree. I asked my father to lift me up so I could see what was in it. He did so and I saw two white eggs in it. I asked him what kind of eggs they were and he said that he did not know. The next day we came past there and there was a yellow bird on the nest.—Claribel L. Withold, Munith Michigan.

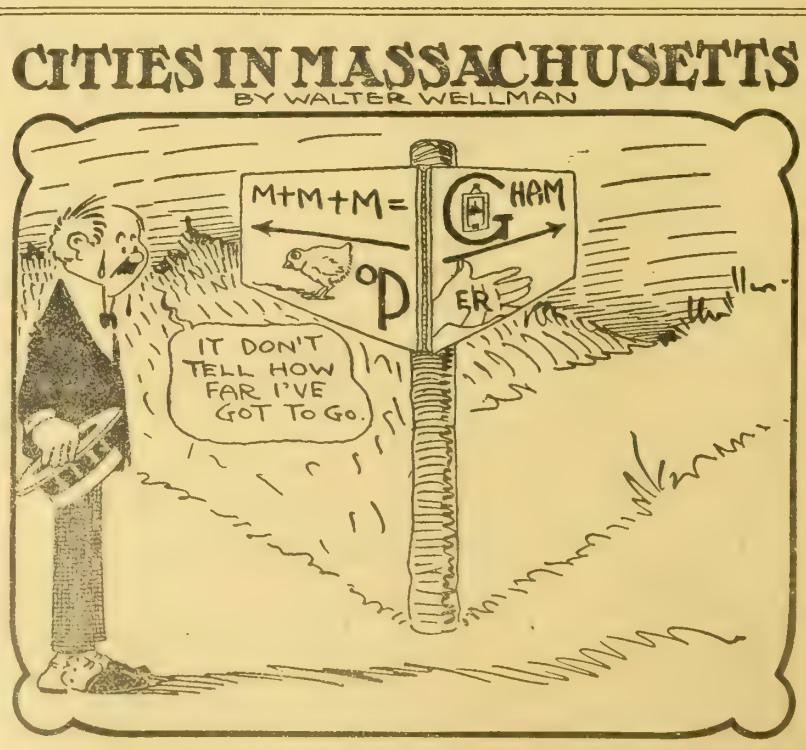
Dear Aunt Clare:—I am a girl eleven years old and I will be in the seventh grade when school begins the 1st of September. We live on a 140-acre farm. We have two little calves about a month old. We have six horses, and six head of cattle. For pets I have one Angora cat, it is yellow and white. We have an old hen and 20 chicks about two weeks old. I did have a dog but it was getting so old that my Uncle had to kill it. We have about a hundred sheep and lambs. We sold about 200 quarts of raspberries and about 500 quarts of cherries and a lot of other fruit. We sold six bushels of harvest apples and we have a lot more apples to sell. I am going to write a true story. The title of the story is

A Rabbit Story

One day my father was cutting hay down in the field. It was in the forenoon and I thought I would take him a drink of water. When I was about a foot from him he told me to be quiet. I didn't make any noise and he motioned for me to come there. So I went where he was and what do you suppose I saw lying there in a little nest? I saw six little rabbits and they were gray with white spots on their heads. I don't know whether they were Belgian hares or what they were. We were afraid papa would run over them with the mower so he put them in my apron and I carried them up to the house and made a nest for them. I fed them some milk and I kept them alive until the next day, then my uncle and my brother took them back to the field and put them in the nest. Then a few days afterward they went down to the field to see if the nest was empty and it was, and we concluded that the old rabbit came and got the little rabbits and took them away.
—Irene Kahle, Adrian Michigan.

Dear Aunt Clare—I wrote to you once before but as I did not see my letter in print I thought I would write again. I was ten years old the 6th day of Aug. My sisters gave me a nice surprise party. Papa and one of my brothers are threshing with our machine away from home this year. We expect to have threshers at our place soon. My oldest sister is going to the normal at Muskegon and my other sister is going to the high school at Muskegon. She will be in the eleventh grade. As my letter is getting long I will close. Miss Nellie Isbun, Bailey, Mich.

Dear Aunt Clare—This is my first letter. My father takes the M. B. F. and likes it fine. We live on a 130 acre farm. I have three brothers and two sisters. Merle Churchill, Imlay City, Mich., R 2.



Mr. Brown is puzzled. He has walked a long distance when he finds a sign post which gives the names of four places, in each of which he has relatives, but the sign does not tell the distance to each place. What are the names of the four cities in Massachusetts?

Farmers Views on Hopper Plague

(Continued from last week)

Kalkaska County

Five out of six Kalkaska correspondents, while admitting that the loss has been great, disagree as to the extent and whether it is greater or less than last year. W. H. M. of Kalkaska reports damage to buckwheat, millet, corn, rye and wheat. The hoppers are not doing as much damage as earlier. He concludes, "The weather is fine with cold nights. The crops are looking pretty good." C. B. of Kalkaska writes, "In regards to the crops in my neighborhood there is very little left of anything but grasshoppers." Mrs. R. E. E., reports that the damage in Excelsior township has not been as great as in surrounding townships owing to the fact that poison has been plentifully used in previous years. The principal damage in that township has been to seeding. She says, regretfully, "This was an ideal year for seeding and in fact all kinds of crops if it had not been for the grasshoppers."

G. A. B., of Kalkaska hands us this jolt, "Having read your article in the M. B. F. ,and also from the trend of your letter regarding the grasshopper plague in Northern Michigan I consider it would be useless to tell you anything about it as you don't seem to want to be convinced."

But this letter from S. S. P. of Kalkaska makes us feel better:

"The township here has used over a ton of arsenate poison so far, and while the hoppers have been bad and are still, we do not consider them serious. In fact, crops are in better condition in most instances because of plentiful rainfall than they were last year. We drive about the country a great deal and from what we see they have done some damage to crops south of us where they worked earlier in the year but our crops were further advanced and with the help of wet weather they have so far kept ahead of the pest Some fields of corn and buckwheat are quite bidly eaten and we are afraid of some damage to seeding, but otherwise have nothing to fear because of the extensive use of poison. As to estimating any loss to crops as far as our own are concerned we consider it very slight and what we know of the surrounding neighborhood, could not be considered serious. In fact, we feel that our crops are going to make as good or even a better showing than for the past two years."

Wexford County

One out of five correspondents in this county believe the damage done by hoppers is as great as last year. Three say that it is much less while the fifth believes the damage is very slight. B. H. M. of Manton tells of the damage to oats and seeding and says that the use of poison has done a lot to kill off the hoppers and prevent loss. His conclusion is that "there will not be as much damage this year as in the past two years." J. E. N., of Mesick says, "They are not so bad this year as they were last." W. E. H. of Cadillac believes that we have not been full informed on the hopper subject, yet from a close reading of his letter it is clear that he does not think the hoppers as bad as a year ago which was practically the same conclusions we have previously stated. Mr. H. writes entertaingly of specific instances of loss, why the hoppers are worse in some places than others, why farmers are handicapped in their fight, results obtained from the use of poison, etc. He says: "Unless outside aid is given by the state or better still the owners of the cut-over lands who have made millions from the timber are compelled in some such way as they are now compelled to cut noxious weeds on such lands, to poison the 'choppings' in the spring before the grasshopper is large enough to travel, the farmers will eventually lose out in the fight with this plague and have to leave his home which he has valiantly hewn out of the wilderness, for new fields, and they cannot sell out at any price. I think the grasshopper plague must be combatted in a sane, intelligent way and not made a subject for extravagant stories, but every means possible should be employed to give aid to the farmers in the northern section of Michigan in eliminating this deadly foe to every growing crop. My request in closing is, if you really desire to aid farmers in this section that you use your paper, as a means of educating people as to our need of controlling hoppers by compelling owners of vacant cut-over land to fight them the same as local residents. Wishing your valued paper every success, etc."

G. B., of Manton, says there has been "very little damage in his neighborhood. In my opinion," he writes, "there was a thousand times more damage done by hoppers a year ago than this year. We never have any damage from them only in times of severe drought. I don't know what damage has been done in other localities but in my opinion there has been no damage anywhere in Michigan to speak of."

Little Loss in Emmet

Only one out of four correspondents in Emmet county seems blue over the hopper damage. J. C. J. is certain the pest is worse this year than a year ago, but cannot say as to the preceding year because he was not farming in Emmet.

R. W. A., of Petoskey, says: "The hoppers are here but not as bad as you have been informed by newspaper men. Crops are looking the best they have in years in this immediate neighborhood." Mr. A. understands that to the north of his place the damage has been greater, due to adjoining slashings where the hoppers breed.

E. H. C., of Brutus, does not find the hoppers as bad this year as last. One neighbor lost a field of oats, another a field of cucumbers and at present the hoppers are bothering the rye but does not think the damage will be great. The use of poison has helped to stem the pest. "The press reports," concludes Mr. C., "do exaggerate the hopper damage, for although we are troubled with them they are no worse than last and the damage will not be so high due to the plentiful rain."

A. C., of Harbor Springs says the total loss will not exceed one fourth of one per cent.

Missaukee Escapes Serious Damage

Three correspondents in Missaukee county agree that the damage is less than last year and not nearly so great as pictured. J. C. P., of Falmouth credits this to the plentiful rainfalls and cool weather, but he fears that a dry, hot, August might mean greater damage. He says that a number of farmers have left the neighborhood because of the ravages of hoppers and their inability to get help. J. D., also of Falmouth says, "There are some grasshoppers here but they have not done any damage so far as crops were never better in years. There are always some cranks looking for frosts and grasshoppers or something else to holler about but believe me I have always lived in good old Michigan and farm crops never looked better."

A. R., of Lake City, writes, "The pest is not so serious this year as in 1919. The grasshoppers appeared earlier than usual and in great numbers so that it seemed as though the plague would be greater than ever before thereby causing the rumors that have been circulated. Precautions were taken in many communities to fight the pest and much grasshopper 'dope' was used. Perhaps on account of the occasional cold spells and heavy showers the pest has not thrived. I know of no case where farmers have lost entire fields as was the case last year. The damage, in my estimation, caused by the hoppers will be slight compared with last year. In driving through the country I have not yet seen any results of the depredations of the pest as were plainly noticeable last year."

(Concluded next week)

A Gillette Tire is a tire of plus value. And here is ample proof of that—second year sales of Gillette Tires were greater than the second year sales of any other tire ever produced. That tremendous demand was developed only by actual delivery of greatest mileage at least cost.

Gillette Cord Tires, like the hardy old polar, have grit, spirit, endurance—that take punishment without a whimper.

The exclusive Gillette Chilled Rubber Process toughens rubber and develops strength, endurance, recuperative quality to the highest mileage economy.

The Gillette Cord is built for mileage, and gives it. It has proper suspension of cords which spreads vibration and strain evenly over the entire structure of the tire. It has proper resiliency. It can have no tread separation. It can not be affected by heat or cold. It can *not* lose its pliancy. It can give you nothing but easy riding, money-saving mileage on any car, under any condition.

Put one Gillette or a full set on your machine now.

If there is no Gillette dealer in your vicinity, write our general sales office.

Will You Introduce a Friend or Neighbor?

HERE'S AN INTRODUCTORY COUPON—Tear it out and hand it to a friend or neighbor who is not a subscriber. It is worth just 25c to him, because we will send The Business Farmer on trial to any new name from now until January, 1921, nearly 6 months, for this coupon and a quarter (25c) in coin or stamps.

25c This Coupon is worth twenty-five cents to any NEW subscriber introduced by an old subscriber. .. ..

The Michigan Business Farmer, Mt. Clemens, Mich.
Friends:

I want to introduce a NEW subscriber and for a quarter (25c) enclosed in coin or stamps you are to send our weekly every week until January, 1921.

Farmers Service Bureau

(A Clearing Department for farmers' every day troubles. Prompt, careful attention given to all complaints or requests for information addressed to this department. We are here to serve you. All inquiries must be accompanied by full name and address. Name not used if requested.)

PAYMENT FOR KEEPING

My father-in-law was sent to me about three years ago by a son who was tired of caring for him. The other son thought the same thing. So there was nothing else for me to do but keep him or send him to the poor house. The latter I would not do. About a year ago my wife died. Since then and before none of them seem to be interested in the old gentleman's welfare. Then I tried to make an agreement for the sons to pay the burial expenses and doctor bill and I would care for him all his life. That they refused. Then I engaged the service of a lawyer to collect board after a certain date or make them take care of him themselves. They would not pay. So the sheriff took the old gent to the son's home. Being they were so stubborn and was so opposed to having the old gent around, could I charge board for the three years? He is an invalid. I was not able to have him at the time he was brought and did not ask me whether we were in a position to care for him nor let us know he was coming. How much should I charge per week?—T. H., Lake City, Mich.

There having been no agreement on the part of the sons to pay for the care of their father there would be no contract liability therefor. An express contract is necessary. The supreme court of this state has said: "Care of an aged and infirm father by a daughter is usually dictated by the better instincts of a common humanity and is so rarely bestowed upon contract that no implied contract can be predicated upon its bestowal or receipt. The law will not associate with the discharge of a purely filial duty an implied obligation to pay for the same. To support a recovery therefor an express contract must be clearly shown."

The sons were liable in a proper proceedings in court to pay for the care of their father if they were of sufficient ability to do so. The statute says: "The father, mother, and children, being of sufficient ability, of any person who is blind, lame, old, impotent or decrept, so as to be unable to maintain himself, shall, at their own charge, relieve and maintain such poor person, in such a manner as shall be approved by the directors of the poor of the township where she poor person may be." The statute provides what steps shall be taken if the child neglect to care for the parent.

The supreme court in another case has said: "There is no common law liability resting upon a son to provide for his father. There is a moral obligation resting upon a son to care for his father so far as is consistent with his own means and station in life, but this does not become a legal duty except by statutory enactment. This liability does not attach until the proceedings set forth in this statute has been had." I am of the opinion that you could collect nothing from the sons for the care of their father without an express agreement on their part to do so.—*W. E. Brown, legal editor.*

SHALL WE DO AWAY WITH THE STATE FISH COMMISSION?

Would do away with State Game Commission because it screens fish from free passage up the Manistee River. Until the erection of the Commonwealth Power Co.'s dams in the Pine, the Stronach and junction in the Manistee river we were able to have a steelhead trout or a sucker in the spring. But since the completion of the dams the fish commission has had men here taking spawn and have had the fish ladders screened at the upper end which prevents us catching any fish.

We have to drive 24 miles to get a fish and then pay 10 cents a pound for trout and 5 cents a pound for suckers. The fish ladders are properly installed. We absolutely know neither a steelhead or a sucker ever got over the Stronach and none has gotten over the ladder at the Junction in the two years it has been in. We think hereabouts that such things ought to be looked into. We do not believe the fish commission has a right to prevent us catching the fish we, as taxpayers, help pay them to raise. I am sure every voter in Wexford, Lake, Benzie and Manistee counties would vote to do away with the State Fish Commission and we think we have more than an even chance with the other counties in the state. We want to get this matter before the people. Now Mr. Editor please publish this letter and give us your idea on the same through the Michigan Business Farmer.—J. C. Jr., Harrietta, Mich.

It is true that we operated a field station at the above dam for a few weeks the past spring, for the purpose of collecting rainbow trout eggs for our hatcheries. We caught at that point about six thousand rainbow trout, of which about seventy-five per cent were returned to the river after being handled for fish cultural purposes. We took upwards of six million eggs from which nearly five million young fish were hatched and distributed, including very liberal planting in the rainbow streams of the four counties mentioned in your letter.

This large output of young rainbow trout would have been nearly a total loss if our work had not been carried on. Comparatively few of the large trout go over the dam thru the fish chute as constructed, and those that get over are damaged or injured to an extent that most of them would not get very far upstream. Conceding, however, that every trout would have gone over the dam, if they had not been intercepted, not one per cent of the eggs deposited would hatch under natural conditions. In other words, there is an enormous waste under natural conditions, which is saved through fish cultural treatment.

Rainbow trout were entirely unknown in this state until after they were introduced from the hatcheries, and the spawn was obtained from the far West, through fishing operations that were identical with our field work at Junction Dam Brook trout were also unknown in all of the counties above mentioned until the streams were stocked from hatcheries. If hatchery operations are discontinued, it is absolutely certain that trout of all kinds will be practically extinct within a few years. This fact probably is not generally known nor understood.

The suckers that were taken incidentally along with the rainbows do not and will not go over a fish way, like the one installed at Junction Dam. We sold them for five cents apiece, a merely nominal sum, in view of the times. Our object in selling them was to obviate the charges as to discrimination and favoritism that were made when we gave them away in former years. All receipts from sale of suckers and the limited number of rainbow trout, were turned into the State Treasury.

We believe that our work is fully justified by the wonderful success that has resulted from the planting of trout throughout the state and that there would be no complaint whatever, if it were generally known or understood that there would soon be no trout fishing in any season of the year, but for fish cultural operations.

Any further information that we can give you along these lines will be cheerfully furnished.—*Seymour Bower, Supt., Michigan Fish Commission.*

LICE ON PEAS

I have about nine acres of contract peas, which, until a short time ago were looking fine. Then all at once the vines were covered up with small lice, and within a few days the pods seemed to curl up and the vines wilted right down. Can you tell me what causes this? I would be glad to hear through M. B. F. and thank you in advance.—C. L. T., Deckerville, Mich.

Treat your peas in the same way as M. S. of Monroe county has been advised to treat his cucumbers.—*Associate Editor.*

LICE ON CUCUMBERS

Could you please tell me through your paper some method of controlling the lice or bugs that infest cumber vines?—M. S., Monroe Co.

Several insects interefere with the welfare of cucumber and melon vines. The Cucumber Beetle (striped) feeds on the leaves, and the young tunnel as grubs in the roots. Plant more seeds than are needed to produce vines and thin out the injured plants and dust with hydrated lime and flour of sulphur (one of sulphur to five or six of lime), through coarse cloth. Some prefer arsenate of lead powder mixed with nine parts of hydrated lime. About the bases of the vines on the ground throw some tobacco dust to prevent beetles from layin geggs on stems. Paris green is not reliable on these tender vines.

The Cucumber Louse usually starts in a few hills and then spreads over the field, cold, wet weather being favorable to the louse. Some prefer to bury the first few vines attacked to retard spreading. A good spray is Persian insect powder, 1-2 ounce to a gallon of water; also nicotine sulphate, 1-2 pint to 50 gallons of water, if 40 per cent sulphate is used, spraying upward from beneath. The difficulty lies in getting the spray on the lice. Each louse must be fairly hit to be killed.

The large Black Squash Bug, or stink bug, not only feeds on vines, but probably also carries the wilt. It may be trapped on cold nights under pieces of board and dropped into a can of water, having a little kerosene on top.—*Special Bulletin No. 93, Experiment Station, M. A. C.*

HAIRY SAND VETCH

Will you explain through your paper the following: The value of hairy sand vetch as hay. The time for cutting. Will soy beans do well on fertilized sandy soil? The value of the hay and the sale for same. Will alfalfa grow after soy beans? Which is the most paying crop on sandy soil, wheat or rye? What are the beneficial returns from one application of two tons of lime and 250 pounds of phosphoric acid per acre on a crop rotation of corn, wheat, and hay? Are cow peas considered as of as much value as fertilizer and hay? Which of the above is the best to plow under for green fertilizer?—F. C., Newaygo Co.

Hairy Vetch is frequently used for hay, good results being secured by sowing the mixture of two bushels of oats and twenty pounds of Hairy Vetch seed as early in the spring as a suitable seed bed can be prepared. This mixture should be cut for hay and when the oats are in the early dough stage and the vetch is forming pods.

Soy beans usually produce a fair growth on fertilized sandy soil. Well cured soy bean hay has about the same feeding value as clover or alfalfa hay. The seed have nearly the same feeding value as oil meal. It should be easier to secure a catch of alfalfa after raising a crop of soy beans provided the soil is not acid, and the seed is inoculated.

On a light, sandy loam a larger yield of rye is usually secured than wheat. The price per bushel however, will have to be taken into consideration in determining which is the most profitable crop.

Cow peas do not produce as much growth in this state as soy beans. If it is desirable to plow under a summer grown crop, soy beans may be used. Rye and vetch, however, make considerable growth between regular crops, and consequently are more desirable for this purpose.—*C. R. Megee, Ass't Prof. of Farm Crops, M. A. C.*

The Collection Box

SAFES NOT FIREPROOF

"In 1915 I bought a safe from the Meilink Co. of Toledo, sold to me by the Lewis Sales Co., their agents, and in 1920, February 5th, my house and contents burned, also safe and contents burned to a crisp, the size of safe is 3 1-2. I payed $42 for same also $42 cash and $15 war savings stamps and $100 worth of jewelry burned with it completely spoiled. I wrote to the Lewis Sales Co. and they referred me to the Meilink Safe Co. of Toledo Ohio. I wrote them about the matter and they told me that that size safe was not guaranteed but the safe was guaranteed to me also their circulars guaranteed them. I am a subscriber of your paper and I see by the Farmer where you have helped others. Can you do anything for me?"—A Subscriber Gladwin County.

We wrote the Meilink Company, and they answered as follows:

"We build a large line of safes for all kinds of purposes. There is no Safe Company in business that we know of, that can make a claim to an 'absolutely' fireproof safe, nor does any company guarantee a safe as such. This depends entirely upon the condition of the fire.

"The Lewis Sales Co. are not our appointed agents. We sell small safes to anyone that wishes to buy them.

"As far as his reference to a guarantee is concerned we know nothing of such guarantee. We do not guarantee safes in this manner. If we know the conditions under which the safe is to be used, we can advise the purchaser what he ought to buy and we are very careful in giving this kind of advice.

"The No. 3 1-2 has not a very heavy wall and consequently has not enough fire protection to be used as a good risk in a country dwelling, nor would we recommend it for such. The safe can be used in cities where the fire risk is not so great, and in departments and places of this kind. *The Meilink Steel Safe Co., Formerly the Underwriters Safe Co.*

CHICAGO FIRM PAYS

"April 14 we sent a money order of $17.96 to Philipsborn's of Chicago for 1 summer suit for a boy, priced $4.98, also for 1 kimona, priced $2.98, total, $7.96. I received from our mail carrier his receipt for the $7.96 and handed him a $20 bill because we could not make change, but when he came next day he put a receipt in the mail box of $17.96, and the change that would have been my due had I sent that much to the company. I spoke to him of the mistake showing the two receipts. He told me that the clerk in our local post office made the mistake. I have explained to Philipsborn's and filled out blanks they sent me, but the questions are all the same. I thought perhaps you would try and see what you could do. I received a boys suit, age 11 but nothing whatever like they agreed to send for the price, in fact there was a tag attached telling me there had been a substitution of inferior grade made. I never received letter explaining things, except a card telling me my merchandise had been sent, but no kimona has ever arrived nor any settlement for same saying nothing of the ertra $10 that was sent."—Mrs. A. K. O., Bancroft, Mich.

We referred this complain to Philipsborn's and received a prompt reply stating they were making a settlement, but through an error our subscriber did not receive the full amount of money due her. We again got in touch with the company and they replied they would adjust the matter to the entire satisfaction of Mrs. A. K. O. A few days later we received the following letter from Mr. O.:

"Yours at hand in our mail yesterday. Also a letter from Philipsborn's making a complete settlement and we are very grateful. To show you we appreciate your double kindness, please find enclosed a $1. While we feel your services have been worth more, we can hardly spare more at present. Thanking you once again we remain,"—A. K. O. M. and Wife Bancroft, Mich., July 28th.

As there is no charges connected with this service to our paid-up subscribers we have credited the dollar on your subscription by advancing the expiration date on your paper one year.—*Editor.*

WATCH TRANSACTION

"I answered an adv. for watches selling at $2.95 or 2 for $6.90 and one free for selling the two. Now I sent the money and did not hear from them for a long time. I wrote and asked them to give a reason for the delay. They then delayed two weeks and sent me the three watches but not the kind they advertised. One of the three was in bad shape, the main spring was twisted and the back cover could not be placed back, and I wrote the company about it, but they do not give an answer. Now the address of this firm is the Elliott Phelps Co. Chicago, Ill."—C. M. B., Merrill, Mich., July 11th.

Upon receipt of the above letter we wrote the company, and a few days later received the following from Mr. B.:

"Since you wrote the Elliott Phelps Co. asked me to send the watch back and agreed to exchange it. Should I not hear from them or that they send a substitute I will write you again. Thanks for your accommodation."—C. M. B., Merrill, Mich.

COMPANIES CAN RAISE RATES

I am interested in some good life insurance. Kindly advise me if the rates can ever be raised in the Bankers' Life Association, Monmouth, Illinois, or National Life Association, Des Moines, Iowa. —F. A. N., Galien, Mich.

The Illinois Bankers Life Association of Monmouth, Illinois, and the National Life Association of Des Moines, Iowa are authorized to transact business in this state as co-operative or assessment life associations. Companies of this class have the right to levy additional assessments, or increase the rate of assessment, at any time it may be found necessary to meet their obligations.—*L. Hands, Deputy Comm'r, State Department of Insurance, Lansing.*

"HEARTS OF THREE"

(*Continued from Page* 11)

door, he beat upon it with his fists and prayed to his Chinese gods that no peevish Solano should take a shot at him before he could explain the urgency of his demand.

"O go to hell," Alesandra said, when he had opened the door and flashed a light on the face of the importunate caller.

"I have big secret," Yi Poon panted. "Very big brand new secret."

"Come around tomorrow in business hours," Alesandro growled as he prepared to kick the Chinaman off the premises.

"I don't sell secret," Yi Poon stammered and gasped. "I make you present. I give secret now. The Senorita, your sister, she is stolen. She is tied upon a horse that runs fast down the beach."

But Alesandro who had said good night to Leoncia, not half an hour before, laughed loudly his unbelief, and prepared again to boot off the trafficker in secrets. Yi Poon was desperate. He drew forth the thousand dollars and placed it in Alesandro's hands, saying:

"You go look quick. If the Senorita stop in this house now, you keep all that money. If the Senorita no stop, then you give money back."

And Alesandro was convinced. A minute later he was rousing the house. Five minutes later the house peons, their eyes hardly open from sound sleep, were roping and saddling horses and pack-mules in the corrals, while the Solano trible was pulling on riding gear and equipping itself with weapons.

Up and down the coast and on the various paths that lead back to the Cordilleras, the Solanos scattered questing blindly in the blind dark for the trail of the abductors. As chance would have it, thirty hours afterward Henry, alone caught the scent and followed it, so that, camped in the very Footstep of God where first the old Maya priest had sighted the eyes of Chia, he found the entire party of twenty men and Leoncia cooking and eating breakfast. Twenty to one, never fair and always impossible, did not appeal to Henry Morgan's Anglo-Saxon mind. What did appeal to him was the dynamite-loaded mule, tethered apart from the off-saddled forty odd animals and left to stand by the careless peons with its load still on its back. Instead of attempting the patently impossible rescue of Leoncia and recognizing that in numbers her woman's safety lay, he stole the dynamite mule.

Not far did he take it. In the shelter of the low woods, he opened the pack and filled all his pockets with sticks of dynamite, a box of detonators, and a short coil of fuse. With a regretful look at the rest of the dynamite which he would have liked to explode but dared not, he busied himself along the line of retreat he would have to take if he succeeded in stealing Leoncia from her captors. As Francis on a previous occasion at Juchitan had sown the retreat with silver dollars, so, this time, did Henry sow the retreat with dynamite—the sticks in small bundles and the fuses, no longer than the length of a detonator, and with detonators fast to each end.

Three hours Henry devoted to lurking around the camp in the Footstep of God, ere he got his opportunity to signal his presence to Leoncia; and another precious two hours were wasted ere she found her opportunity to steal away to him. Which would not have been so bad, had not her escape almost immediately been discovered, and had not the gendarmes and the rest of Torres' party mounted, been able swiftly to overtake them on foot.

When Henry drew Leoncia down to hide beside him in the shelter of a rock and at the same time brought his rifle into action ready for play, she protested.

"We haven't a chance, Henry," she said. "They are too many. If you fight you will be killed. And then what will become of me? Better that you make your own escape, and to bring help, leaving me to be retaken, than that you die and let me be retaken anyway."

But he shook his head.

"We are not going to be taken, dearest sister. Put your trust in me and watch. Here they came now. You just watch."

Various mounted on horses and pack mules, whichever had come handiest in their haste, Torres, the Jefe, and their men clattered into sight. Henry drew a sight, not on them, but on the point somewhat nearer where he had made his first plant of dynamite. When he pulled the trigger, the intervening distance rose up in a cloud of smake and earth and dust that obscured them. As the cloud slowly dissipated, they could be seen, half of them, animals and men, overthrown, and all of them dazed and shocked by the explosion.

Henry seized Leoncia's hand, jerked her to her feet, and ran on side by side with her. Conventiently beyond his second planting, he draw her down beside him to rest and catch breath.

"They won't come on so fast this time," he hissed exultantly. "And the longer they pursue us the slower they'll come on."

True to his forecast, when the pursuit appeared it moved very cautiously and very slowly.

"They ought to be killed," Henry said. "But they have no chance, and I haven't the heart to do it. But I'll surely shake them up some."

Again he fired into his planted dynamite, and again turning his back on the confusion, he fled to his third planting.

After he had fired off the third explosion, he raced Leoncia to his tethered horse, put her in the saddle, and ran on beside her, hanging on to her stirrup.

(*Continued next week*)

UNCLE SAM'S HIRED MEN WHO SERVE THE FARMERS

(*Continued from page* 6)

he had a great deal to say about the work of the Bureau of Markets, and in doing so the force of his personality and capability was plainly evident in spite of hi smodesty.

"The Bureau of Markets is endeavoring to devise the quickest, most direct and least expensive methods of getting products to market," he said. "Slip-shod methods must go, for the new methods will be better.

"Of course, it must be appreciated that the job can not be done overnight. Present marketing methods are the product of evolution, and better marketing practices must come through gradual improvement in methods and procedure. It has taken decades and in fact a century or so to develop the production side of agriculture to its present degree of efficiency, and there yet remains much to be done. I hope that the development of efficient marketing machinery will not take that long, but it is a vast undertaking, and every step of the journey must be sure-footed.

"To accomplish that result the bureau needs to have on its staff workers of proved ability through practical experience; workers who are keenly sympathetic with the farmers' needs. In a word, we want in the Bureau of Markets the best marketing specialists found anywhere in the world.

"But of equal importance is the hearty co-operation of everyone. By the character of service rendered we want the farmer to know that the bureau is his friend, and not to hesitate to call upon it to help him solve his marketing problems. It is his bureau and we are ready and anxious to serve him."

In that last sentence is contained the keynote to George Livingston's code. Service to others is his religion. He is constantly devising some means of helping the farmers with their problems, and the only reward he asks is that the farmers come half way to meet him.

RELATIVE HARDINESS

"It is a mistaken idea that scrubs are more hardy than pure-breds. Pure-breds are hardy if only those are kept which are of good constitutional vigor."—*U. S. Department of Agriculture.*

(Political Adv.)

Emory Townsend

Candidate

for

Nomination for

Congress

8th Congressional

District

To the Voters of the 8th Congressional District:

Honorable Emory Townsend of Saginaw, a successful farmer, an active member of the Michigan Farm Bureau, a good lawyer and business man, who two years ago came near being nominated for Congress, is a candidate for nomination for Congress at the primaries, August 31, 1920.

Remember that the primaries are more important than the general election. Is it not your imperative duty to go to the primaries, August 31, take a Republican ticket and vote for Emory Townsend? He will make a good Congressman and not be absent ninety per cent of the time as some others have done.

The World War Veterans should be paid a liberal bonus not by the veterans, their relatives or common people as has been proposed but by the "STAY AT HOME PROFITEERS."

Michigan Business Farmer,
Mt. Clemens, Mich.

Gentlemen: — Enclosed please find check for $14.60, the sum due for 13 weeks' chicken ad and one week strawberry ad. If we need any more ads we will let you know later.

Your ads surely bring business. We're all sold out for April and May. Yours is the best paper for Michigan farmers that there is in the state. Continue in the same good way and you will have the support of every bona fide farmer.

Cordially yours,
C. W. HEIMBACH,
Route 5, Big Rapids, Mich.

M. B. F. brings them

A Platform Worth Emulating

THE FOLLOWING platform is the exclusive property of Mr. Chas. F. Burnham of Amadore, who is a candidate for the state legislature. We say "exclusive" because we know or no other candidate who has so clearly and forcefully expressed himself on state issues. We are not reproducing this platform for the purpose of furthering Mr. Burnham's candidacy though we are mindful of the fact that it may have that effect. Inasmuch as there is another very good farmer running for the state legislature in the same district, (although he has not up to the present time declared a platform) we refrain from suggesting to our readers in Sanilac county which of the two they should vote for. We are taking up valuable space for the printing of Mr. Burnham's platform because it is such a clear and concise definition of issues pertaining to the welfare of the farmers. It is a platform which commends itself to us very strongly, being consistent in its every detail with the policies of this publication. Read and call it to the attention of the candidates in your county:

"The liquor question is settled for all time so far as the states are concerned, the 18th amendment having become a law, and the action of the Supreme Court of the United States in upholding its validity places the control and enforcement of the law in the hands of the Federal government. Any change or repeal of the 18th amendment must come through the congress at Washington, D. C. Our government is one of representative authority, but I believe it is the duty of every citizen to lend his moral and spiritual aid in upholding the law. Any attempt to evade a rule of action as defined by a majority of the electors cannot but have one result—the end of constituted authority. Those who would preserve our institutions and observe the law.

"We are drifting away from ecoomy in public affairs. The per capita expense of running the state government according to the report of the auditor general which is the official public record for the year 1919, was $6.81 while in 1916 it was but $2.17, or about one-third the present cost. The taxpayers of Michigan will be called upon to pay immense sums of money on account of the very liberal appropriations of the 1919 legislature $5,000,000 for good roads, $2,000,000 for Jackson prison, $1,500,000 for the University of Michigan, $2,000,000 for the erection of the state's new office building, and also the increase in the running expenses of the various departments of the state government caused by the general rise in prices. It may not be much harder for us to pay what we shall be called upon to pay in 1920 than what we were asked to pay in 1916, but we shall demand and expect that every dollar shall be spent economically and that the state shall receive a just and adequate return for the money expended. The people are in no temper to tolerate extravagance or graft.

"I believe that in all financial transactions the state should be governed by the same rules as the individual citizen, for the state is but a collection of individuals associated together for the purpose of government. The tendency of the times to foster public improvements by bonded indebtedness and according electors who are not tax payers a voice in these matters is wrong both in principle and policy, and a pay as we go program wherever expedient is a far safer course than a long drawn account with its added rate of interest.

"We should demand a ten hour day pay to be measured by results. Those who labor on the farms have never been able to qualify in the eight hour class and the returns on their farm investments preclude the possibility of ever getting a rating from R. G. Dunn, and yet we are asked to compete with those who would idle while the nation and state suffer for the lack of production. We are not asking sympathy. We are appealing to the American conscience for a square deal alike for one and all.

"One of the greatest problems confronting rural life is the district school the eighth grade being the limit of educational advancement. This has been the means of denying to the family of limited means the same opportunity to educate their children as those more fortunately situateed. This is one of the glaring defects of the rural educational system. If we are to retain our social caste and maintain the ideals upon which our government is founded it must be apparent to all forward thinking citizens that every child should have the legacy of his birthright, a trained mind and a healthy vigorous body. I am in favor of any and all legislation that will give to our rural schools the means to this end.

"I am also in favor of legislation that will give to our teachers in the public schools an adequate return for their labor and a competence for old age. The training of our children, who will be the citizens of the future, is one of the noblest of all callings and merits its reward from a grateful public.

"I am opposed to and will vote for the repeal of the act creating the state police. I do not believe it is in keeping with our free institutions to maintain a standing army of one hundred and fifty-four men in times of peace and drawing a combined salary of $211,360 and no one so far as I am able to determine can give an intelligent reason for their creation and appointment unless it was for gallant and meritorious action in the field of politics. Now we have in every county in the state a sheriff and numerous deputies and marshals and a very large number of police officials whose duties are to execute and enforce the laws and maintain peace. If their force is not sufficient to accomplish this,the statute provides that any and all citizens may be drafted and sworn and compelled to assist in the performance of this duty. We also have a national guard of trained soldiers that can and may be called out in case of riot or other emergencies. It would seem, therefore, that every ordinary precaution had been taken to protect the lives and property of our citizens prior to the birth of this august body.

"I am opposed to and will vote for the repeal of the dog law as passed by the last legislature. It denies the right of local self government to the people in the various townships of this state; it places an excessive and uncalled for tax upon all dog owners, compelling claimants for losses to adjust these claims with the county officials, thereby increasing fees, delaying adjustments and diverting all balances that may accrue to the contingent fund of the county which hertofore was apportioned to the public schools.

"I am opposed to all useless commissions as I believe they are added burdens to the public. They receive their official appointment from the governor of the state, and very often are chosen because of the political activities. They are responsible to no one, being a law within themselves, and are merely duplicating the powers and duties of the executive office.

"I believe that all general legislation affecting the whole state should be referred to the people. Had this been a law the Warehouse Amendment would not have been defeated by the enemies of agriculture in the session of the last legislature.

"I have been asked how I stand upon the beet question. I have always been lead to believe and revere the doctrine that 'the laborer is worthy of his hire.' That the farmer is entitled to the fruits of his labor goes without question, and the right of organization for the purpose of collective bargaining is considered by all fair-minded persons to be a matter of right and sound in principle; and has received the sanction of congress and the courts. In conclusion, I would say that I am not antagonistic to any business but I shall endeavor, as far as within my power to secure a better understanding for all interests alike. My efforts will be for a great Sanilac county and a square deal for all."

Genuine Aspirin

Name "Bayer" means genuine
Say "Bayer"—Insist!

BAYER

Say "Bayer" when buying Aspirin. Then you are sure of getting true "Bayer Tablets of Aspirin"—genuine Aspirin proved safe by millions and prescribed by physicians for over twenty years. Accept only an unbroken "Bayer package" which contains proper directions to relieve Headache, Toothache, Earache, Neuralgia, Rheumatism, Colds and Pain. Handy tin boxes of 12 tablets cost few cents. Druggists also sell larger "Bayer packages." Aspirin is trade mark of Bayer Manufacture Monoaceticacidester of Salicylicacid.

99 SHOE BARGAINS

Here is one of 99 real bargagins shown in the new Rambler catalog. A good durable comfortable work shoe. Locally they would cost you not less than $7, perhaps more. Even in our chain stores the selling cost brings the price to $6. Buying by mail does away with these expensive selling forces, high rents and all other unnecessary overhead.

$4.35

ONLY $4.35

Genuine chrome uppers, resists barnyard acids. Heavy soles of oak tanned leather—wear like iron. Space, comfort—well—wear them all the first day and you won't notice them. Brown only. You take no risk, simply send the coupon. Shoes are shipped, pay the postman $4.35 on arrival. If you like them keep them, if not return them and we will refund money, including postage. Your word is enough. Don't delay. Mail coupon today send for catalogue. Sales last year over $1,000,000.

SYMPTOMS OF BLACKHEAD

I am raising young turkeys this year d they seem to have the diarrhoea. uld you tell me what I can do to make me thrive better? Some of them seem be dying from the sickness.—W. D., awkawlin, Mich.

Diarrhoea in young turkeys is one the symptoms of Blackhead which an infectious and very fatal disease e mortality often reaching as high 90 per cent in young turkeys. owever, from the one symptom you ated it would be impossible to tell actly whether the turkeys are af- cted with Blackhead or not.

In the case of Blackhead the ungsters exhibit a drowsy attitude ith constantly increasing lack of gor, the appetite diminishes, the athers ruffled, wings pending and ere is a general debility manifest- . Diarrohea is nearly always pres- it and quite characteristic. The oppings are soft and yellowish in lor and during the latter stages e head may present a darkened purplish appearance due to an npaired circulation of the blood. ie symptom has lead to the disease ing termed Blackhead.

There is no known method of eatment for Blackhead that has oved entirely satisfactory. The or- anisms causing the disease are very ep seated in the liver causing very iaracteristic spots on the surface, hich may be noted upon making a ost mortem examination. This akes the parasites practically im- une to any curative agents.

As soon as any symptoms of the isease are noted the affected birds iould be immediately isolated from ie flock. Thouroughly cleaning and isinfecting the wards will tend to eep the outbreak in check. Five er cent solution of carbolic acid is good disinfectant. Where the di- ease has become prevalent on prem- es to such an extent as to make the iising of turkeys unprofitable it is dvisable to dispose of the entire lot id allow a period of approximate- two years to elapse before restock- ig. Liming or plowing the runs of eeding yards is indicated.

Naturally, affected birds should be estroyed, their carcasses burned or eeply buried. Often the confine- ient of turkeys in close yards has een tried with favorable results.

The above suggestions are offered n the strength of a guess. That iay or may not be the trouble with ie turkeys. The only way that we ould tell definitely whether or not ie turkeys are affected with the dis- ase called Blackhead would be to end one of the affected birds to our r. E. T. Hallman of the Veterinary linic, East Lansing, Mich., who will iake a complete diagnosis of the case and report the same to the own- er. This type of work is done by the College free of charge for residents of the State of Michigan. We are always glad to be of service in this manner whenever possible and trust that the above information may be of service.—*W. E. Newton, Ass't in Poultry Husbandry, M. A. C.*

TONGUE LOLLING

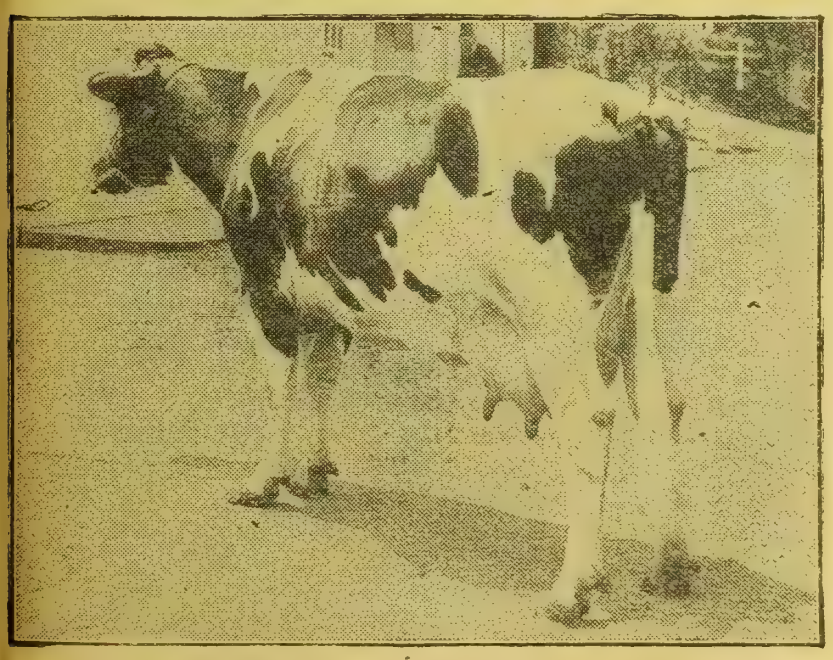
Please advise me how to stop a horse from holding their tongue out. I have a horse that holds its tongue out when bridled and would like it stopped as it is a good horse. Thanking you in advance, —Frank Hegler, Deford, Mich.

Tongue lolling is the name applied to this condition, or the habit of extending the end of the tongue from the side of the mouth while driving. The habit may be first acquired in an attempt to protect a sore mouth from further injury, but its continuation is due to the relief to the respirations. This condition is not due to paralysis of the tongue but is wholly a habit. Treatment: First have a qualified veterinarian examine the teeth carefully. The head while driving must be elevated with the overdraw check to bring the air passages toward a straight line. The mouth may be closed with a nose band attached to the bridle. Attaching the check bit to the main bit by means of a flexible rubber hose, will frequently prevent the habit. When these measures fail, amputation of a small portion of the tongue is the only recourse.—*W. A. Ewalt, veterinary editor.*

ABSCESS ON COW'S JAW

Would appreciate it if you could tell me what is the matter with my cow. She has abscesses on the side of her face. They started in January and lasted until she was turned out on pasture in the spring and then healed up. She is in good condition and has been fresh for 8 weeks and gives a good flow of milk. We have had two veterinarians and they both pronounced it tuberculosis of the bone. Would the milk be good for use? —T. E. R., Arenac County.

It is impossible to give a positive diagnosis of this case without seeing the animal. She might have Actinomycosis, commonly known as Lump Jaw. She may have received an injury sometime which has affected the bone thus causing the abscesses to which you refer. Should there be a loose particle of bone from some cause or other, you would get the abscess formation, at which time you would get a fetid discharge. From the symptoms you have given I can see no indication of tuberculosis. I would suggest you have a graduate veterinarian to examine your cow.—*W. A. Ewalt, veterinary editor.*



Again a purebred Holstein-Friesian cow, Lady Aaggie Echo Hengerveld 323463, attains a place in the dairy Hall of Fame by breaking the record for milk and butter production in the senior three-year-old class. She produced under semi-official test in 365 consecutive days 28,008 lbs. of milk containing 1,200.07 lbs. of butter. This new butter record eclipses the former figures recorded for Jewel Pontiac Segis 229261, whose remarkable achievement was 1,171.1 lbs. of butter. The previous milk record was 27,949.4 lbs. held by Eli Aaggie Fayne Johanna 286097. Lady Aaggie Echo Hengerveld is owned by the Toyon Farm Association, Inc., San Francisco, California, and was bred by Mr. Albert E. Smith of Sumas, Washington. Her sire is Paul Aaggie Oakhurst 55387 and her dam is Lady Echo Hengerveld D Kol 2d 159461.

MR. F. L. GARRISON

It is a fact that the success of any business enterprise depends upon its efficiency and economical management, combined with ample capital for operation of its business. The Detroit Packing Company will have two millions or more of working capital. The practical management of the plant and cold storage departments of The Detroit Packing Company will be under the direction of the General Superintendent Mr. F. L. Garrison, who has spent the past twenty-three years acquiring a full knowledge of every department of the packing house business, from the purchase of raw material in the form of live stock through plant operations including dressing of carcasses, processing of meats and by-products, marketing of all tonnage produced. His initial training and experience came through twelve years of association with the largest and best equipped plant east of Chicago. Later Mr. Garrison was connected in an executive capacity with three other packing houses in the East. We believe that the experience of Mr. Garrison puts him in a strong position to handle the business of The Detroit Packing Company, as our present operations will be conducted mainly in Michigan and in territory East, including all exports, with all of which he is full conversant. Mr. Garrison will be ably assisted by efficient managing heads of every department.

ADDRESS ALL MAIL TO THE FIRM

Dold

Buffalo, N.Y. March 16th, 1920

Detroit Packing Company,
Detroit, Mich.

Gentlemen:-

Your letter of recent date asking about Mr. F.L. Garrison as a practical packing house man, noted.

Mr. Garrison was with this Company from 1897 to 1909, during which time he fulfilled varied duties acceptably and doubtless benefitted himself materially in acquiring definite knowledge and experience in packing house practice. In 1909 he left us to take charge of a packing house in Ohio which he operated successfully for five years.

We believe Mr. F. L. Garrison to be both practical and capable and should you place him in your organization are satisfied he will creditably handle the business entrusted to him.

Yours very truly,

THE JACOB DOLD PACKING COMPANY.

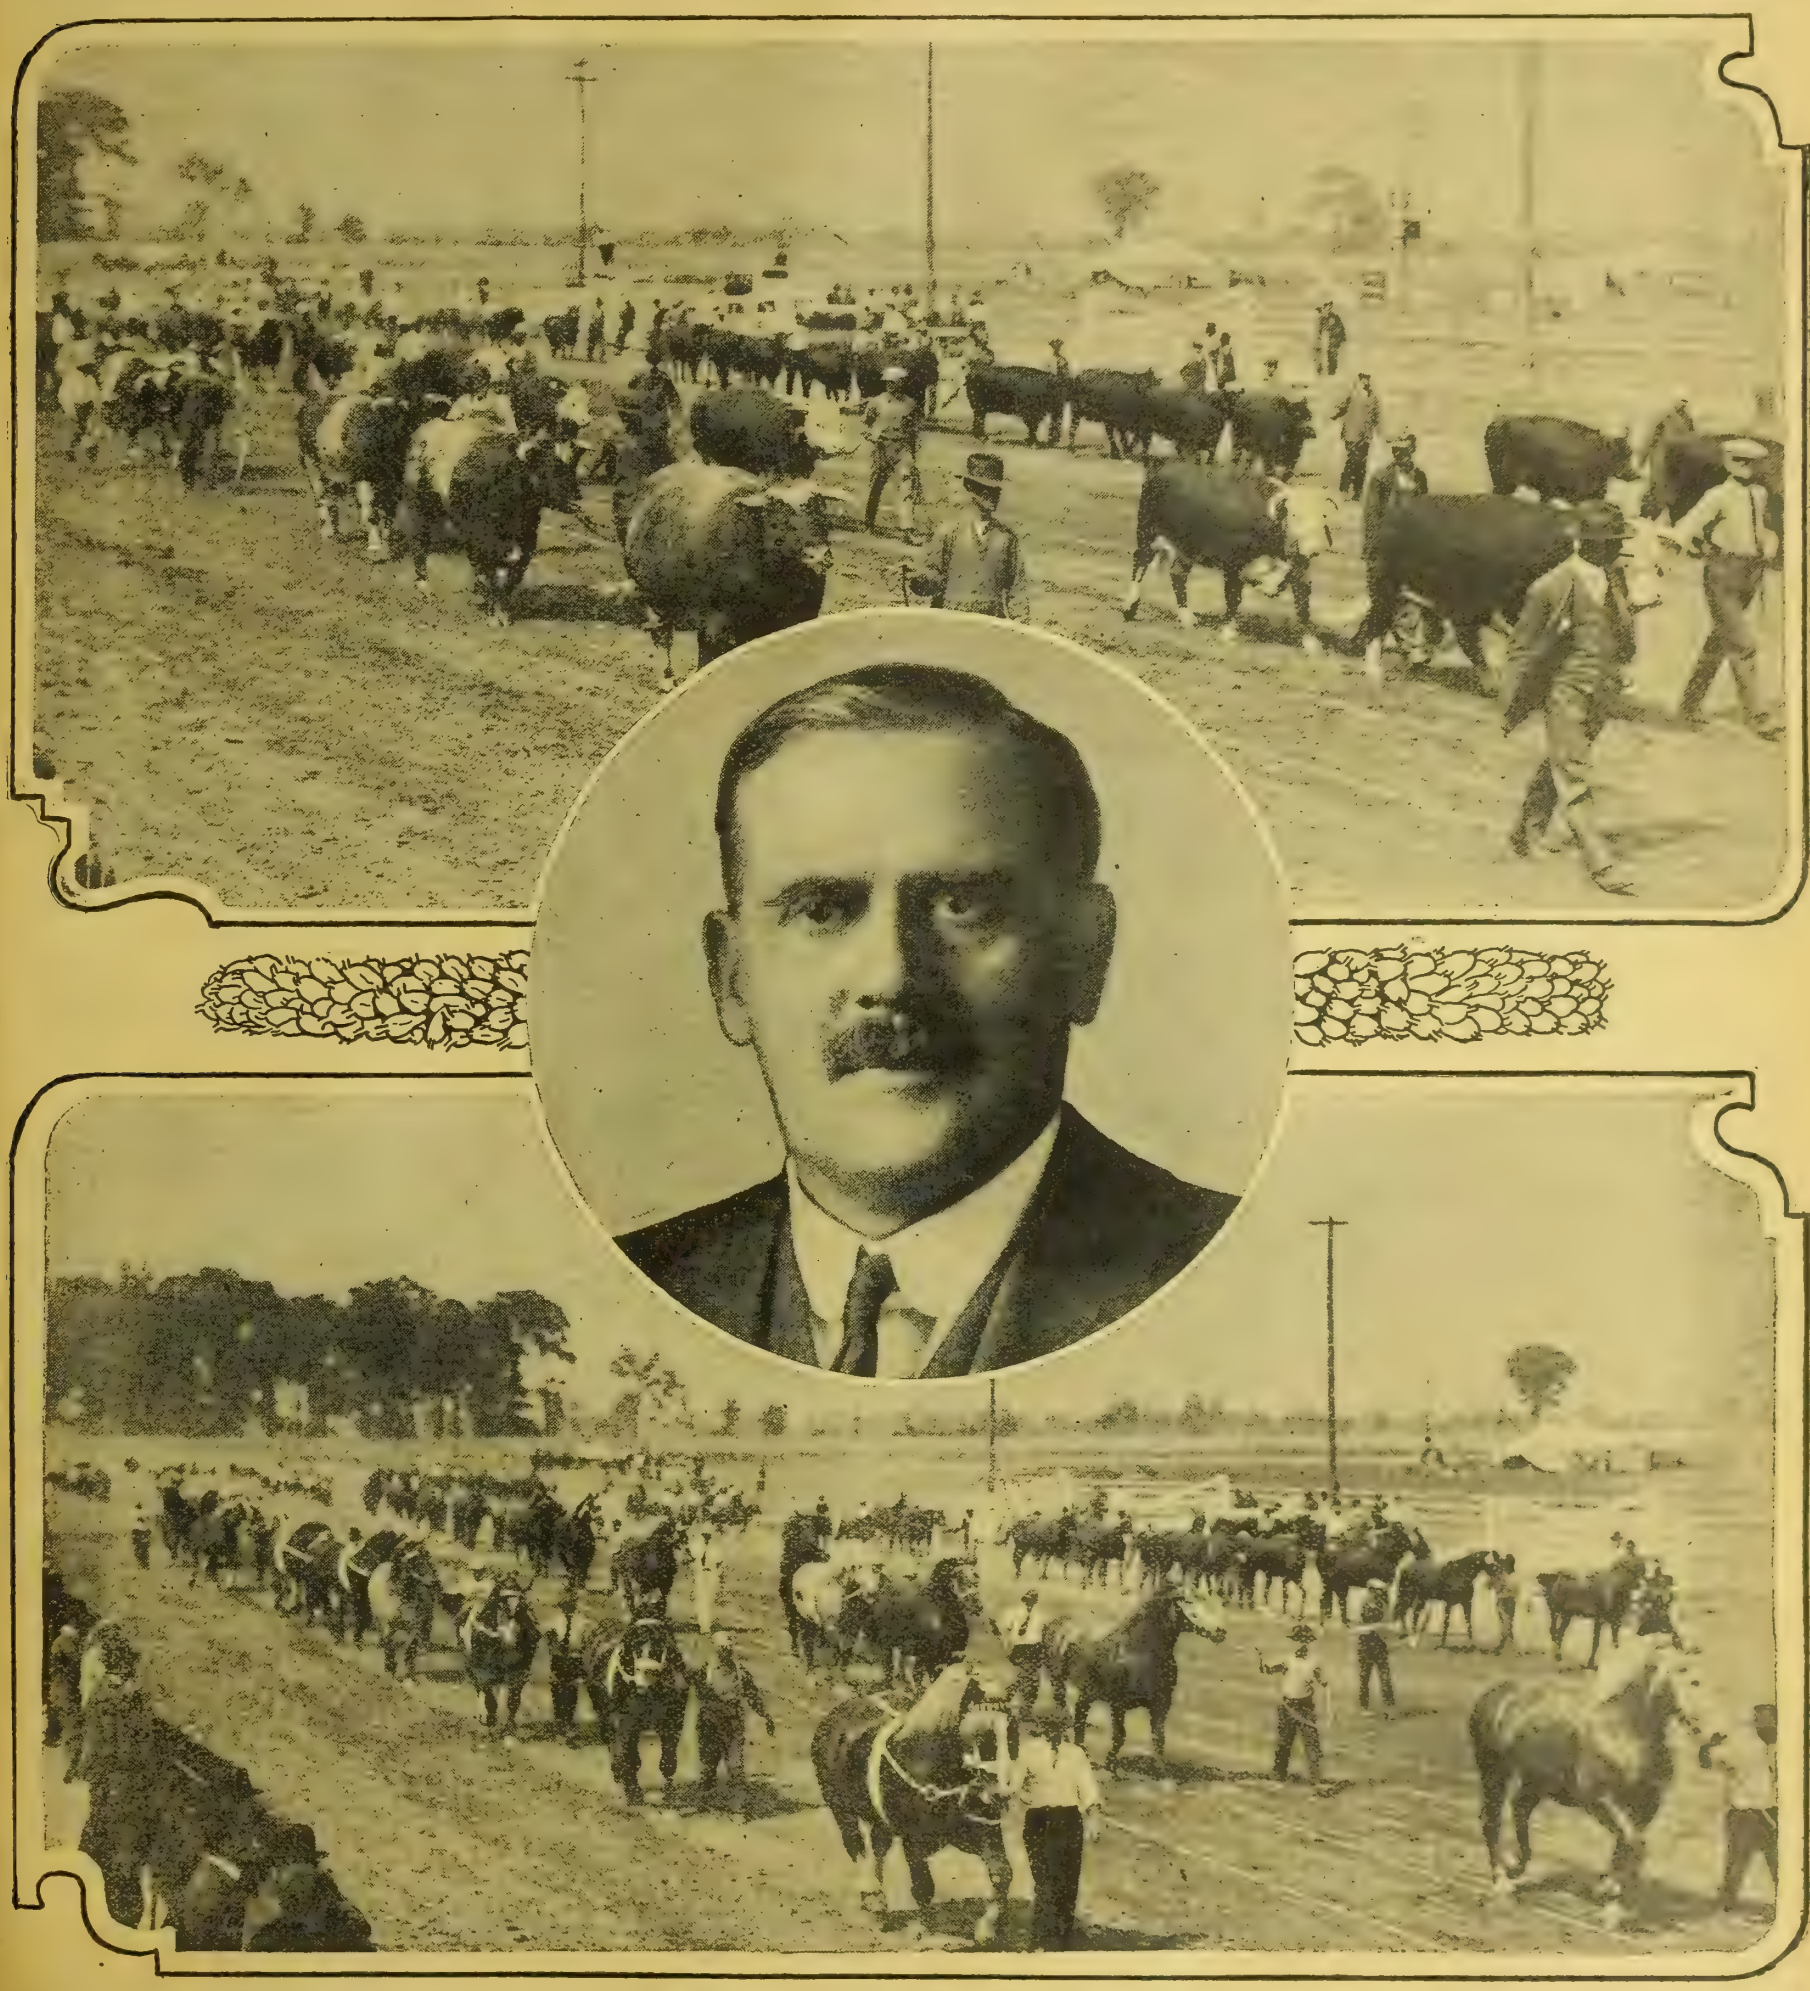
The Michigan
BUSINESS FARMER

An Independent
Farmer's Weekly Owned and
Edited in Michigan

Vol. VII, No. 51 | MT. CLEMENS, AUGUST 28, 1920 | $1 PER YEAR



The 1920 exposition which opens next Friday, will be a real business farmers' fair, according to Mr. George W. Dickinson, Secretary, the man whose likeness adorns the center of this page, and who, as most everyone knows has built the Michigan State Fair to a position where it ranks with the three best on the American continent. The million-dollar pure-bred Live Stock parades will feature some of the best animals shown anywhere and we hope that every reader will plan to be present for a day or two next week.

Campbell Denies Charges Preferred Against Him in Newspaper Article

MONDAY, The Detroit News, published a front page article stating that Milo D. Campbell, farmers' candidate for Governor, was being backed by Sleeper men. These men, of whom Mark T. McKee of Detroit and Gen. Fred W. Green, of Ionia are the leaders, according to this article, intend to secure state control by placing Mr. Campbell in the governor's chair. The charge is inferred that Mr. Campell has promised to make Governor Sleeper a United States Senator from Michigan.

This article, we have been informed from a reliable source, is the first of a series of articles to shake the farmers' faith in their candidate. It is a well-planned dastardly attack against Mr. Campbell as these men know that Mr. Campbell has the best chance to become governor this coming election of any candidate in the field, and it is not in their plans to have the farmers put a man of their choosing into this office. These men are not backing Campbell but have a candidate of their own that they wish to elect and are going to fight tooth and nail to the last ditch to get him elected. The article published Monday and those to follow should be taken with a grain of salt. They have fooled us enough. Let's get out and fool them for once.

Mr. Campbell replies to the article published as follows:

"To the people of Michigan:

"My attention has been called to charges made by a syndicate of newspapers—the only newspaper syndicate in Michigan.

"This Michigan newspaper trust, aided by The Detroit News, which is allied with this trust, favors the candidacy of Mr. Mott, an official and candidate of the billion dollar General Motors corporation. They say that the struggle for the nomination for governor lies between myself and 'the field.' Naturally, this newspaper trust and its Detroit ally desire to discredit the candidacy that appears most formidable.

"The articles are so worded that they give inferences that I would be controlled by other men and have made promises to them. As they were careful to merely infer that I would be controlled, I cannot demand that they retract because the inference is in the mind of the reader and not definitely stated in the newspaper. But they make one direct charge—that I endorsed the Non-Partisan League. This is a lie, and every farmer and every other person with whom I have talked concerning the Non-Partisan League, knows it to be a lie. For, ever since I learned just what the Non-Partisan league was, and I learned it by careful investigation, I have fought the ideals of that organization tooth and nail. I have demanded a retraction of this statements from the newspapers that printed it because it is the only direct statement in the stories they printed.

"The charges relate to the alleged activity of certain men in my interest. They assume that these men have an ulterior purpose to serve in supporting me and specifically that Governor Sleeper is to be appointed United States senator in the event of my election should there be a vacancy in that office.

Denies Making Promises

"So far as they relate to me the charges are absolutely false. I have not promised to appoint Governor Sleeper senator, have never been asked to and have no thought of doing so.

"Some of the men referred to in the articles favor my candidacy, others of them do not, so far as I know. Originally very few men connected with any political organizations were for me. More recently I have found some of them following my standard.

"Whether th is, as charged, because success seems to be coming my way, I do not know, but in any event I solemnly pledge you that no promise of patronage or appointment has been made to any one and if any one is supporting me in the expectation of controllingg my actions as governor, if elected, I want to serve notice on them now that they will be disappointed. No man will be governor except myself if I am successful.

"I welcome the support of everyone, white or black, good or bad, old or young. But that support must come freely and without hope of reward.

"I wish also, while I am at it, to deny the charge that I am masquerading as a dirt farmer. I do not and have not claimed for the past several years to be still engaged in actual farming personally, though my farms have been my chief occupation during this time. The farm organizations fully understand this and did not choose me as their candidate through any misunderstanding. They knew from my years as president of the National Milk Producers' federation, president of the National Board of Farm organizations, member of the National Agricultural Advisory commission and through my life long service for agriculture that I was in close touch with the real problems of the farm and they believe that I would make a good governor for all the people.

"These charges are very vexing, but are also encouraging, as they show whom my opponents fear.

"They constitute a shrewd attempt to alienate my friends both among the farmers and in the towns, but I am convinced that like all eleventh hour charges, they will prove a boomerang.

"MILO CAMPBELL."

CAMPBELL SUPPORTERS CAMPAIGN IN DETROIT

Last Tuesday 30 hard-fisted, calloused-handed farmers, headed by A. B. Cook, of Owosso, went to Detroit to campaign for Milo B. Campbell. They distributed themselves about several of the big factories for the initial noon-day meetings that will extend over three or four days. These farmers are making the appeal direct to the laborers.

SEN. DUNCAN McRAE GETS FARMERS ENDORSEMENT

Impressed with the record established by Sen. Duncan McRae of Harrisville at the last session, the farmers legislative committee of the Clare district met Wednesday of two weeks ago with Wm. Matthews, secretary and Mr. John Black and F. G. Wood, directors of the Ogemaw county Farm Bureau and unqualifiedly endorsed Sen. McRae for re-electeion. The same committee also endorsed Milo Campbell for governor. The 28th senatorial district consists of the counties of Alcona, Arenac, Clare, Crawford, Gladwin, Iosco, Ogemaw, Osceola, Oscoda and Roscommon.

Truths about the Dow Chemical Company

The Dow Chemical Company appreciates the good will and confidence of the people which enemies now seek to destroy by untrue assertions scattered broadcast concerning it. It feels confident that if the people are placed in possession of the facts, they will judge correctly.

The Company's War Record

The Company's policy in placing its plant at the disposal of the Federal Government and manufacturing at the Government's request many products upon which no profit was taken, caused the market price of The Dow Chemical Company's common stock to decline over fifty per cent from the time the United States entered the war until the armistice.

The Dow Chemical Company was the only manufacturer of mustard gas in the United States, outside of Government arsenals. It developed the process by which all mustard gas produced in the United States was manufactured. It was one of the first chemical manufacturing companies in the country to be awarded the Certificate of Merit by the Government as a testimonial of its services. The official citation accompahying this award reads as follows:

"Through the co-operation of this Company with the Chemical Warfare Service, the first large scale equipment for the manufacture of ethylene, sulphur monochloride and mustard gas was obtained. The Company furnished detailed design of apparatus for the manufacture of certain secret products. Its staff developed much of this country's information with respect to the manufacture of mustard gas. It furnished free use of its processes and its accumulated experience in the procurement of bromine brines largely without compensation and it is believed at some financial loss."

The Cleveland Trust Company, whose integrity and accuracy will not be challenged by any informed person, has just completed an audit and examination of the transactions between The Dow Chemical Company and the U. S. Government. We submit their findings:

THE CLEVELAND TRUST COMPANY,

Cleveland, Ohio, August 17, 1920.

This is to certify that we have audited and examined the accounts of The Dow Chemical Company and find that said Company in all its transactions with the U. S. Government for the period April 6, 1917 to December 31, 1918, had total sales amounting to $3,409,393.66 and that their total net profit on these sales amounted to $107,371.59. The total percentage of net profit on these sales was slightly less than 3 2-10 per cent. During this period the Company borrowed $790,000.00. No deduction has been made in the above for interest charges on this amount, nor on invested capital.

The Cleveland Trust Company,

By J. Lyman Bryan, Manager The Public Accounting Department.

The borrowed money referred to in the above statement was all used in financing U. S. Government contracts. We paid interest charges on this borrowed money of $51,879.80 leaving an income available to our stockholders of $55,491.79, or a net profit to our Company upon U. S. Government contracts of less than 1 2-3 per cent. Its war contracts netted it less than 1 per cent per annum upon its average assessed valuation. It was solely on account of other business that it was enabled to pay dividends from earnings during this period.

If any one questions this statement we will permit our books to be examined by any reputable certified public accountant, and if it can be shown that we made any greater profit on our U. S. Government contracts we will not only pay all expenses of such audit, but will also donate $10,000.00 to charity.

Cider Making Under National Prohibition Law

Farmers Desiring to Sell Cider Must Treat With Preservatives or Put up in Sterile Closed Containers

APPLE growers of the United States are showing much interest in the cider question and many inquiries have been made lately in connection with the manufacture of cider and vinegar.

According to John F. Kramer, Federal Prohibition Commissioner, there are but three ways by which cider can be made and sold within the present law—to preserve it as sweet cider, to sell it to manufacturers who have license to make vinegar and for exclusive home use.

Persons who desire to make cider for conversion into vinegar must first obtain a license from the Federal Prohibition Commissioner. Those persons who desire to make cider for home use must not add sugar or any other ingredients which would increase the alcoholic strength above one-half of one per cent.

The Internal Revenue regulation regarding the making of cider and vinegar set forth as follows:

"All persons desiring to manufacture cider or other intoxicating liquors specified in this article for conversion into vinegar, or to use such cider or intoxicating liquors in the manufacture of vinegar, should file application on Form 1,404, prescribed in Article III, setting forth in such application the exact acts for which they desire authorization. After approval, a permit will be issued authorizing the acts stipulated.

"Cider manufactured by persons holding permits as above, may be used by them in the manufacture of vinegar or may be sold or furnished by them in quantities of five wine gallons or more to other persons holding permits to use cider in the manufacture of vinegar upon receipt of permits to purchase, Form 1410, and may not be otherwise disposed of.

"Sweet cider containing not less than one-half of 1 per cent of alcohol by volume may be manufactured and sold without the necessity of obtaining permit, provided such product is put up and marketed in sterile closed containers or is treated by the addition of benzoate of soda, or other substance which will prevent fermentation, in such proportion as to insure the alcoholic content remaining below one-half of 1 per cent of alcohol by volume. The responsibility for keeping the alcoholic content below such percentage rests on the manufacturer, and in any case where cider is found upon the market containing alcohol in excess of the allowed percentage the manufacturer will be presumed to have manufactured and sold an intoxicating liquor.

"Cider containing less than one-half of 1 per cent of alcohol by volume may be sold by the producer to persons holding permits to manufacture vinegar. If such cider, however, contains one-half of 1 per cent or more alcohol by volume when removed for conversion into vinegar, it will be necessary that the persons producing same hold permits to manufacture cider as above provided and furnish same only upon receipt or permits to purchase.

"In the manufacture of cider, sugar or other fermentable substances should under no circumstances be added to the apple juice for the purpose of increasing the alcoholic content inasmuch as such practice is held to constitute the production of a mash fit for distillation within the prohibition of Section 3282, Revised Statutes.

"The following intoxicating liquors may be manufactured and used in the manufacture of vinegar by persons who have obtained permits therefor.

"(a) Such persons may operate vinegar factories for the production of vinegar by the evaporation process under the provisions of Section 3282, Revised Statutes, as amended, under the procedure outlined in Internal Revenue Regulations No. 7, pages 225-229. Vinegar factories using such process are not permitted within 600 feet of any registered distillery, industrial alcohol plant, or rectifying house.

"(b) Persons obtaining permits as above may produce vinegar by the manufacture of a malt beer for direct oxidation into vinegar without evaporation process and without generators or exidizing.

"(c) Persons holding permits for such purposes may manufacture vinegar from cider produced by them or may procure cider in quantities of five wine gallons or more from other persons authorized to manufacture the same or may obtain tax-paid wines from persons conducting bonded wineries upon furnishing permit to purchase, Form 1410, for use in the manufacture of vinegar. Cider containing less than one-half of 1 per cent of alcohol by volume may be procured for use in the manufacture of vinegar from persons manufacturing same in their own homes without the necessity of furnishing permit to purchase, Form 1410.

"Vinegar may be produced from alcohol lawfully denatured by the ovidation of such alcohol in oxidizing or generating process plants without the necessity of obtaining permits under this article.

"(a) Persons operating bonded wineries may convert wine into vinegar upon such premises without obtaining permit for such purpose, provided that upon removal from such premises the product contains 1 1-2 per cent or more of acetid acid and is treated as vinegar and not sold or used as wine. Before removing such product from the bonded premises application should be made to the Collector on Form 1415 for permission to make such removal, accompanied by a signed copy of the chemical anlysis of the material, showing the percentage of acetic acid contained therein. Such vinegar may be removed from the winery free of tax and proper credit taken on the records kept at the winery.

"Persons manufacturing cider or other intoxicating liquors under this article must keep a record of the amount manufactured as well as the date of manufacture, and must show upon such record the disposition of all liquor manufactured by them.

"Containers of all cider containing one-half of 1 per cent or more of alcohol by volume and other intoxicating liquor manufactured for sale as such under this article must be labeled immediately upon manufacture to show the following: (1) Name of manufacturer; (2) Date of manufacture; (3) Serial number of permit authorizing manufacture; (4) kind and quantity of contents. The instructions in Article XVIII will apply to such labels."

Article XVIII regarding labels sets forth as follows:

"Except where otherwise stated herein all labels required by these regulations must be provided by the person required to affix them, bear the date when affixed by him, be rectangular in form and of such size as to be conspicuous. These labels must be printed in the English language in letters easily legible and must contain no advertising matter or other data not required by these regulations except that translations of the data required to be printed may also be printed thereon in any foreign language.

"(a) All such labels must be securely pasted to the commercial head of barrels or in a conspicuous place on the surface of other containers and, in the case of wooden containers, must be secured thereto by five tacks, one in each corner and one in the middle of the label.

"(b) All labels required by these regulations must remain intact until the containers are completely empty. No person is therefore at liberty to substitute his own label for any such label or to cover or deface the same in any manner whatever.

"(c) All persons are forbidden to transfer intoxicating liquor from one container to another, whether or not rectified or otherwise treated in the interval, without placing a label upon the new container in the same data as the label upon the container from which transferred. This requirement does not apply to containers holding one pint or less, except in the case of labels especially provided for bottled-in-bond whisky and brandy, medicated alcohol, certain medicinal preparations and other alcoholic compounds, and beverages containing less than one-half of 1 per cent of alcohol by volume."

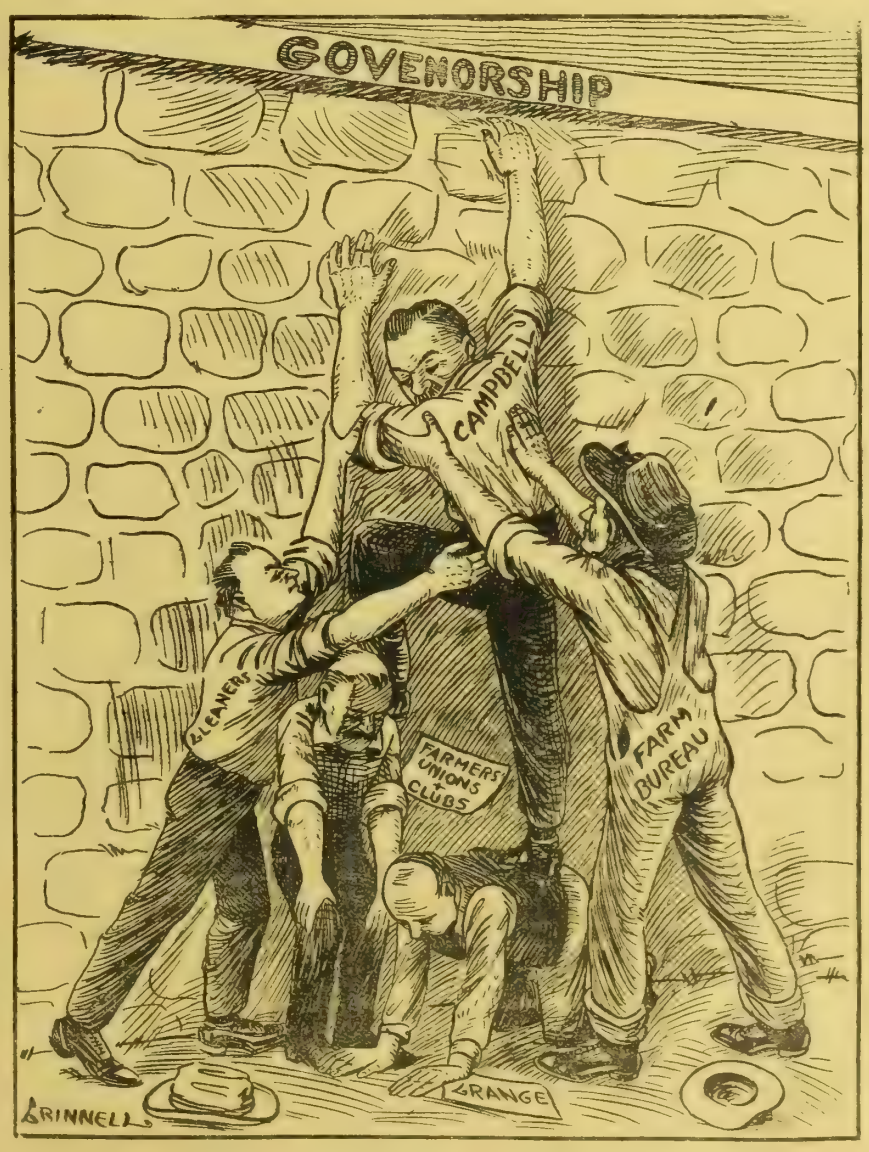
In connection with preserved cider which would contain not more than one-half of 1 per cent of alcohol by volume, Commissioner Kramer stated manufacturers of this product are urging that this is too stringent and that a test case is now pending in the New York courts on that question.

Making Cider

WE WOULD like to know the law of making cider and selling it. We are planning on making some of our apples into cider and drawing it to Detroit. Let us hear through the Business Farmer. Phillips Bros., Lenawee county, Mich.

Section 36, Article V of the Prohibition Regulation provides that cider containing less than one-half of one per cent of alcohol by volume intended for sale must be put up and marketed in sterile closed containers or treated with preservatives in order to keep the alcoholic content within the proportion allowed by law. If cider is found on the market containing alcohol in excess of the above amount the manufacturers thereof will be presumed to have manufactured and sold an intoxicating liquor. Inasmuch as he is responsible for keeping the alcoholic content below one-half of one per cent this presumption will not be raised if the increased fermentation has been caused by the unlawful acts of the purchaser or some third party.

Sweet cider made for home use so long as it contains less than one-half of one per cent of alcohol may be sold, but if it is not intended for immediate consumption it should be preserved since cider containing alcohol in excess of the above amount cannot be possessed by any person not a permit holder other than the person who made it in the home.—John F. Kramer, Prohibition Commissioner.



They'll Put Him Over, if They Keep on Pushing.

The tractor demonstration attracted considerable attention. The camp of the boy club members Some of the farmers that attended came by auto.

U. P. Farmers Meet in Successful Round-up

Three Thousand Gather at Chatham to Discuss Agriculture and Attend Barbecue

NEITHER THE press of farm work nor lowering skies and rain were sufficent to keep the Upper Peninsula farmers home from the great round-up which was held at the Chatham Experiment Station, August 10th to 12th. Farmers came with their families from miles around to help make the occasion a success, to such good effect that the round-up has been called one of the greatest events in upper peninsula agriculture.

The people of the lower peninsula are as little familiar with the agriculture of the upper peninsula os of Maine or California. As a matter of fact there are men who think that the only things produced above the Straits is lumber and copper, when probably the total value of the upper peninsula's farm crops very nearly approaches if it does not exceed the combined value of her ore and forest products. This being the case the people of Michigan should have a better understanding of the farming possibilities of the upper section. The occasional agricultural fairs and round-ups which have been held under the direction of county agents and other agricultural representatives have done much to acquaint the people of the state with the true facts about upper Michigan.

The farmers' round-up at Chatham was successfully managed by Mr. D. L. McMillan, superintendent of the experiment station at Chatham. Mr. McMillen brought to Chatham some of the best authorities and speakers on agricultural problems and arranged a program which for variety, entertainment and instruction, could not have been improved upon. The objects of the round-up, Mr. McMillan tells us, were to stimulate interest in the agriculture of the upper peninsula by both the farmers of the section and the state at large; to acquaint the farmers with the great work that is being performed by the experiment station; to instruct the farmers in the better methods of farming and to bring the agricultural leaders together.

The attendance the first day of the round-up was about 400. It consisted largely of farmers who came both to learn and to satisfy their curiosity about the work of the Experiment Station. Others in attendance included county agents, club leaders, home demonstration agents, members of state board of extension workers, and professors from the M. A. C. The program that had been arranged was carried out in detail with but few changes, the speakers as before note, being men of statewide prominence. A portion of the day was spent in inspecting crops and live stock work under the direction of the U. P. station workers. During the afternoon an excellent program was carried out by the county agent and farm bureau workers discussing the problems of the State Farm Bureau in the different counties and arranging for the expansion of that organization to other counties of the upper peninsula this season. In the evening the alumni association meeting and banquet was held. Instruction also given to the members of the boys' and girls' clubs in live stock judging, etc., by Mr. Waldron and Prof. Brown of the College.

A boys' and girls' camp was conducted in connection with the round-up, the expenses being borne by the college. The purposes of the camp were two fold; to give the boys and girls well-earned recreation and at the same time instruct them in useful matters. The occasion was just one round of pleasure for the young folks, the program of events consisting of such alluring pastimes as a feed in the orchard, bonfire and stunts at the camp grounds, a dip in the creek, live-stock judging, weenie roast, barbecue, base ball games, club stunts in charge of R. A. Turner, state club leader. The camp was situated in a beautiful spot underneath some spreading elms on the banks of the Slapneck river which runs through the state farm, and the boys were housed in eight large army tents with regular camp bunks filled with hay.

The second day was largely devoted to livestock judging by the boys at which they showed rare aptitude, and attracteed a large crowd of the grown-ups. Dairy demonstrations conducted by Mr. J. A. Waldron was was assisted by the station herdsman, Leonard Braamse, and county agents. Plot work was conducted under the direction of Mr. G. W. Putnam and was very instructive. Sheep and hog demonstrations were in charge of Prof. Geo. Brown, assisted by the station shepherd, Clarence Peck.

Winners In Judging Contest

The winners in the Live stock judging contest were, First place, dairy judging, Carl Johnson, Gogebic county, Prize, 1 pure bred Holstein heifer.

First place, pig judging, Theodore Jarvinen, Baraga county, prize, one pure bred Duroc Jersey pig. First place, sheep judging, Lawrence McNamara, Alger county, 1 pure bred Hampshire Ewe.

All the members were required to judge the three classes of stock, sheep, dairy and hogs. The highest scoring team of three boys from some one county in the Upper Peninsula was selected to represent the Cloverland district at livestock judging contest at the State Fair in Detroit, with all expenses paid by the Detroit State Fair Association.

The team winning this honor was the Gogebic County Team made up of the following gboys:

Carl Johnson, Ironwood, Mich; Leonard Nylund, Ironwood, Mich.; Luther Olsen, Ironwood, Mich.

The second place team was the Alger County Team made up of, James McMillan, Chatham, Mich.; Lawrence McNamara, Trenary, Mich.; Werner Dunquist, Eben Jct., Mich. Thirteen out of the fifteen Upper Peninsula counties were represented at the club camp. Nine livestock judging teams of thirteen members each entered the livestock judging contest. Total registration of club members 101. Regular attendance at club camp 73, for the whole period.

Third Day's Events

The third day of the round-up was the banner day, over 3,000 people

(*Continued on page* 11)

Jackson County Judge Upholds Napoleon's New Consolidated Schools

SOME MONTHS ago the village of Napoleon, and the townships of Napoleon and Columbia, Jackson county, held a special election to vote upon consolidating the school districts. The proposition carried by a narrow margin. Bonds were issued to build a central school, but it was found that a proper structure could not be had for the amount of money authorized. In the mix-up that followed some of the original opponents of the plan, filed a petition in circuit court for a writ of mandamus to force the village and townships to re-submit the question in hopes of turning the consolidated district back to its former status. The petition was heard the latter part of July by Judge Benjamin Williams of Jackson, who not only denied the mandamus but took occasion to praise the consolidated school system.

The opinion cites the act under which three or more rural schools may be consolidated into one graded school, where the school year will be longer, agriculture will be taught and where the building and equipment will be much more complete and used as a community center.

Means Better School

"It is evident," says Judge Williams, "the legislature contemplated a distinct raising of country school standards. The little red schoolhouse of song and story is a relic of the early days of pioneers and their attendant stern necessities. It served its purpose well for those times. but is there any good reason why a child born and raised in the country should not have equally as good free educational opportunities as the city child?

"The prevalent system of scattered units of primary schools, each frequently attempting to teach, with only one teacher, nine different grades without modern buildings, sanitation, equipment or facilities for the best work, be the teacher ever so competent and conscientious, is far from efficient and adequate for modern educational methods. It may be assumed fairly that the legislature knew and appreciated this and by this act hoped to make possible for the country pupils the some type of schooling that previously only the more fortunate city pupils had enjoyed."

Requires Time

The opinion says that time is required to form such a school and holds that the legislature did not contemplate the termination of such newly formed school districts in one year and before a proper trial. At the time of such a consolidation, the act provides for a pro rata distribution of property, funds and equipment and authorizes the issuance of bonds. The opinion holds that the outstanding Napoleon school bond issue of $27,500, the dismantling of former buildings and the ownership of the land must be considered. The judge continues:

"How or by what authority of law is a court to work out the different details of dissolution necessarily involving the rights of holders of bonds, teachers under contract, the state and its financial assistant, the disposition of new buildings if erected, and the distribution of assets among the several consolidated units when no provision as to the details thereof has been made by law.

"It appears to the court that the appeal for relief from the present situation should be made to the legislature for a clear and specific provision for disbanding rural agricultural districts rather than to the courts."

The petition of the mandatory writ is denied with costs.

Consolidated School as seen by Mrs. Dora Stockman

A QUESTION of most vital interest to women in the country is the district school. Our superintendent of public instruction made the statement recently that from questionnaires sent out to country people four out of five families that went into the city gave as the reason the opportunity for education for their children. I submit that they are right.

As a farm woman and a mother I feel under no obligations to give or leave money to my children. I am not over anxious they shall have fine clothes or a home finely furnished. Even under present financial advantages I prefer the country to the city. But I do owe it to my children to give them a healthy body with advantages in training the mental ability God gave them. As citizens of the state we owe to every child equal opportunity for education. We can have as good schools in the country as they have in the city if we want them. Upper Michigan has the kind of rural schools in a majority of cases that the country people need. We in Southern Michigan can have them if we will co-operate and pay for them.

Mr. Johnson said recently that the consolidated school costs more than the present one room school. It does, it is worth more. But—now get this—those who are wanting to decrease taxes—the consolidated country schools does not cost more additional with our standard school than we have to pay now for the tuition to high school, extra board and transportation to send our boys and girls to the city high school from whence they do not return to farm life. I submit to you it is time we build our own schools out in the open country where we can have real education controlled by our own school boards who have the interest of farm folks at heart in hiring teachers and shaping school policies. This, I believe, is the most vital civic question before the citizenship of country people and I am sure our country women are going to make their voices and votes felt on rural educational measures.—DORA H. STOCKMAN, Lecturer Michigan State Grange, Member Board of Agriculture.

Farmers to Have Access to More Good Books

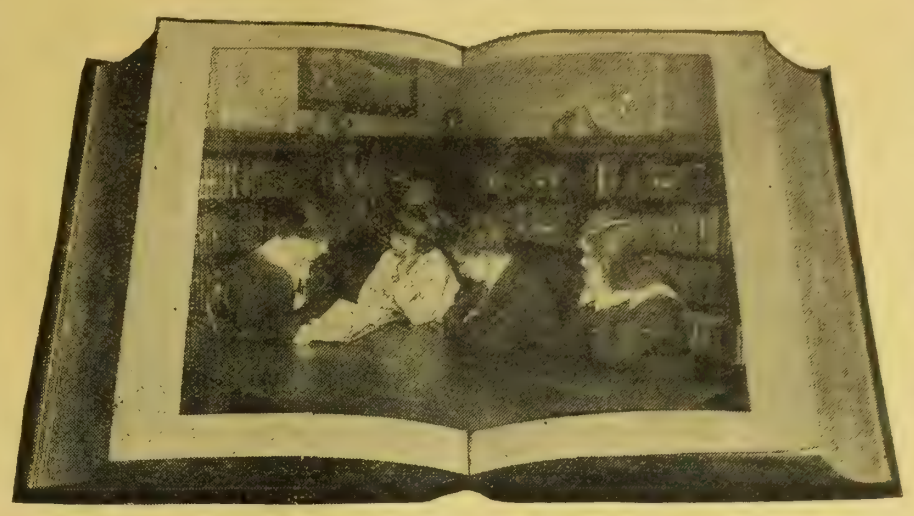
American Library Association to Pay Particular Attention to Book Needs of Farmers in its "Books for Everybody" Campaign

THE AMERICAN Library Association, an organization that is forty-four years old and numbering four thousand active librarians in its membership, has launched a "Books for Everybody" campaign. One of the big objects in this movement is to place more and better books within the reach of the farmer.

It is surprising to know that more than sixty million residents of the United States are without adequate library facilities. Only 794 or 27 per cent of the 2,964 counties in the United States have within their borders any one library of 5,000 volumes or more, leaving 73 per cent of the counties without any libraries adequately equipped to take the initiative in developing a service. Thirty states serve less than 50 per cent of their population; six serve less than 10 per cent and one less than 2 per cent.

At present the small country town libraries haven't a large enough assortment of good books that prove of interest to the rural dweller and many of these libraries have no funds to purchase a larger assortment; in fact, it would be impractical for them to own too many books, because the habit of reading good books has not developed to a very great extent in the United States, but the publicity program, which the American Library Association intends to carry on, will have a direct bearing on each community and will educate the public to demand better reading and cause them to take a greater interest in their local library. Many farmers are so busy that they hardly know whether there is a library in their nearest town or not although often they have an idle moment in which they wish they had a good book to read. This publicity program will bring to them the knowledge that their local library will be their best friend if they will only help a little to finance it, and create a demand for books to their likings by suggesting the kind of reading they like.

The publicity campaign is to be carried on for three years and publications of national circulation as well as newspapers everywhere will be used. It is reasonable to believe that three years of actual education of the people along this line will give every library a new and stronger place in its community and thus



It is time well spent when mothers will take an hour away from their work and read stories of Lincoln, Washington ad other great men in America's history, to their boys and girls. It developes the mind of Young America in the right direction.

cause a larger amount of money to be expended for their maintenance and enlargement.

In addition to carrying on this three year publicity campaign to popularize the library idea following its "Books for Everybody" movement, the association will co-operate with state library commissions and special library associations to hasten the solution of many other library problems. Among these are:

Strive for a better citizenship by using the foreign language press and by other means to promote the reading of books about America; work for the extension of the county library plan to every county in the United States, so that good books may be easily available to all of the population; aid in the establishment of more business and technical libraries; maintain a clearing house of information so that the experience of librarians everywhere may be available to all; establish libraries on vessels of the American Merchant Marine, in coast guard stations and lighthouses; aid in the production of more books for the blind in the new uniform type; continue to supply books to ex-service men who formed the habit of reading and studying during the war and who are not served by local libraries; assist in the maintenance of European headquarters for the international exchange of library information, and finally, carry on a sustained program of education that will result in an increased recognition of the value of library service in adult and juvenile education, and make the library a more potent factor in the life of every community.

The association during the war supplied the men here and overseas with more than 7,000,000 books. And today it is supplying books for the men in the Public Service Hospitals, to those in the Merchant Marine, and to coast guards and light-house keepers. In its present plan small libraries are to be maintained on all of the vessels of the American Merchant Marine. Success in developing our shipping and export trade depends on getting men. By placing magazines and books regularly on all vessels and lending from a central agency of any book to any sailor, men will be more inclined to join this service as they will be able to read for recreation or to study. This will also be applied to the lighthouses and coast guard stations.

To Help Foreign Born

Americanizing the foreigners is one of the largest problems that the association expects to solve. The spirit of unrest that now prevails throughout the country indicates that the New Americans who have come to the United States have been neglected. Little attempt has been made to gain the confidence of these prospective citizens. Thousands of American born have been similarly overlooked. A great majority of the fifteen million new-comers in the United States know practically nothing of American history or American tradition and ideals, partly, at least, because they have been entirely dependent on the publications of their own language for information.

Adult Education

There is a vast and largely unworked field for libraries in supplementing the work of the public school in promoting the voluntary use of books and other printed matter for self education. Thousands of the men and women of high school and college age who went into military service may be stimulated to embark upon reading courses. Large groups of boys and girls who every year leave school to enter business are potential students during their first years out of school. Millions of men and women who, because of changing world conditions, the re-enfranchisement of women, and for other reasons are anxious to gain more information on various questions. By the preparation and wide distribution of study courses on vocations and other subjects, the Association can greatly increase the number of persons who read seriously along definite lines.

"The Use of Books as Tools" has so long been a slogan that it is now a commonplace, but it has yet to be applied universally. The American Library Association, co-operating with local libraries, will endeavor in all sorts of ways to promote the intelligent use of practical vocational, technical and business books. It will encourage the increased publication of such books. It will promote and help in the establishment of libraries in industrial plants. Increased production and greater efficiency is the need today, and the establishment of more technical libraries will be a strong factor in bringing this about.

A fund of $2,000,000 is to be raised to carry out this program. The money will not be raised by an intensive drive, campaign or house-to-in the next few months. "There will house canvas, but will be obtained quietly throughout the country with-be no appeal for funds next year," says officials of the association, "and certainly not until 1923 if there is ever a need for another call."

More Than 1,000,000 Expected to Attend State Fair This Year

WHEN the Jones' invite a few people in for the evening Mrs. Jones has to work hard for several hours in the afternoon planning entertainment and if the party is to be a success without one idle moment she has to give great care and study to the planning. The Michigan State Fair has invited the whole State of Michigan to its home on Woodward avenue in Detroit for ten days and nights and a whole corps of experts have been studying and planning for a year so there will not be one idle moment for all of the 1,000,000 persons who are expected to accept the invitation.

G. W. Dickinson, secretary-manager of the Michigan State Fair, has found it to be a real big job entertaining a million or so people. Each year though for the last 15 that he has been the directing head of the fair the attendance figures have climbed with each succeeding fair. He explains that the fair is the property of the people of the state and that for that reason it should offer something to every one of all kinds and numbers of people.

Last year the fair attendance was 750,000. Mr. Dickinson confidently expects these figures will grow to more than 1,000,000 in this year's fair which opens Sept. 3 and closes Sept. 12. On one day there were 170,000 persons on the fair grounds last year.

As host to all Michigan the fair this year has planned several great tensive courses of education. The Federal government and Michigan Agricultural College have joined together in the preparation of a great farm products exhibit which will cover 30,000 square feet of floor space. Farmers of the state will find it, the experts who are to be in charge of the exhibit say, a college in itself.

More than $100,000 in premiums have been offered for this year's fair. As a result entries now being made indicate that the stock show will be the largest ever held in the Middle West. Special premiums have been offered for herds of 30 or more cattle shown by county or district farm organizations. The premiums in the cattle show alone exceed $17,000.

Taking in the sights on the midway at the Michigan State Fair.

A big exhibit of fur farming has been arranged also in the educational department of the fair this year. Every fur bearing animal in Michigan will be represented, and the whole exhibit will show the best way of handling fur bearing animals as one of the profitable ventures in general farming. Experts will be present to give advice on fur farming.

Amusement for the throngs of fair goers, one of the important features necessary to draw such huge numbers of people together, has been under consideration by a special corps of experts for months. Thrills such as were not thought of last year will be provided this year. There will be a number of bands, a whole circus, horse races, auto races, auto polo, a big fire works spectacle every evening, horse jumping contests, mounted police drills and scores of other big features. Airplanes will furnish some of the biggest thrills. Ethel Rare, the only woman who ever has succeeded in changing from one plane to another in flight has been engaged together with Harry McLaughlin and Fearless Tinney both of whom hop from one plane to another and do all kinds of acrobatic stunts while in the air. Tinney winds up his act by leaping from a plane with a parachute.

Community Gatherings

LAST WEEK Wednesday I gave a talk on the shores of beautiful Silver Lake in Kent county. The occasion was a joint picnic between Silver Lake Grange and Kent County Pomona Grange. I did not arrive in time for dinner so I cannot tell you how good the fried chicken was, but I can tell you that the finest meal of fried chicken and apple pie I ever ate was at the picnic at Pompeii a few weeks previous. Fried chicken is my gastronomical weakness and I can positively assure you that it was no fault of mine that I did not indulge in this weakness at Silver Lake.

You'll be interested in the reason why someone else got my piece of fried chicken. I was busy in my room at my hotel pounding out my speech on a typewriter when one of the local newspapers called up and wanted to know if their political writer could have an audience with me. He came over and in two minutes we were deep in the midst of a red-hot argument. He expressed his fears as to what would happen to the good old ship of state when the farmers took control. He was afraid that they would scuttle the boat, take to the life rafts and leave all others on board to perish. Right then and there the fur began to fly, so to speak, and precious moments which I should have spent on my speech were burned up in a half-hour sermon on the positive duties of men and women everywhere to take a keener interest in politics and endorse men for public office. I told him that if the farmers of Michigan were contemplating either openly or in secret any class legislation I did not know what it was. "Let the farmers elect their men," I told him, "and you'll have less politics and more business in the administration of affairs at Lansing and Washington."

This explains why I did not leave Grand Rapids until one o'clock to speak at a picnic fourteen miles away at 1:30; why I was two minutes late, and why, saddest of all, to relate, I do not know the flavor of Kent county fried chicken.

That's a fine country over in east of Grand Rapids. The telephone poles hid the surrounding country from my sight on the way over to the picnic, but upon my return I was able to proceed in a more leisurely fashion and to observe some of the fine farms that grace the slopes and valleys of that favored region.

But the picnic. A friend of mine recently attended a public gathering in Battle Creek and writing of the experience afterward he said he had never seen so many beautiful and intelligent women together as attended that banquet. But you must remember that my friend has never had the opportunity of meeting the farm women of Kent county. I assert here and now that the beauty of the ladies of Battle Creek is artificial and skin deep compared to the wholesome, natural red-cheeked beauty of the farm women who attended the picnic at Silver Lake. Yes, to be sure, I saw here and there a gentle-faced woman upon whose countenance father Time had traced his recrd of a life joyously or sadly spent. I believe I saw a few whose backs wer bent a trifle from too much child-bearing, and I wouldn't want to swear that I didn't see some motherly hands tremble a little bit. Yet I know that in the eyes of some good man, they are wonderful hands and the possessor a beautiful woman. Of all the women I saw and met at the Silver Lake picnic I recall not a single one whom, in my judgment, could not preside with grace and dignity and competency over any American household.

Another thing that impressed me was the large number of fine looking young men at that picnic. I had read in the city papers and in the magazines that all the boys were leaving the farm and if that is the case all the boys I saw at Silver Lake must have been home on a vacation. It is not my purpose to make light of the trend of country population cityward, for it is serious enough, but if every rural community has as many bright, clean, stalwart young men left to them as I saw over at Silver Lake, there will be no cause to worry about the next generation of farmers. I did observe one thing about those boys and that was that almost without exception they all took an eager part in the games and the sports, and I couldn't help but think that this giving the young men a chance to meet together and play together was perhaps one of the reasons why they were content to remain upon the farms. I couldn't help but wish that every rural community in Michigan might have its community play day on which both young and old of both sexes could just forget work and all be kids together in a general frolic.

That's one of the things I talked upon. I tried to show that there is no earthly sense of the boys and girls leaving the farms if the farms and the communities in which they are located are made attractive. I tried to show them that community picnics, community gathering halls, community entertainment and recreation provided the very things which lure the boys to the city, namely clean, healthy pastime and the companionship of others which every normal boy and girl craves.

I am glad I went to Silver Lake. After sitting in an office much of the time and reading letters and magazine articles setting forth the discouraging aspects of farming, it is a genuine treat to rub elbows with farm folks at their community meets. And I never attend a gathering of farmers, particularly when their wives and children are present, that I do not return home with a renewed and profound sense of satisfaction that my life and the publication of which I am the editor have been dedicated to the farming cause.

Talk Will Not Elect Men to Office: It's the Votes That Count

SOME FOLKS have the funny notion that all they've got to do in order to put good men in office and secure wise legislation is to talk about it. Accordingly a few weeks before election they get all "het up" over the candidates and the issues. They attend political gatherings and argue with their neighbors over the back fence. Then when the primaries come they stay at home and don't vote. That won't elect the farmer candidates by a long shot. It's the votes that count,—not just the votes of a handful of citizens in the rural communities,—but the votes of every last man and woman citizen physically able to go to the polls. The man who can vote and doesn't is a poor citizen. I want to see every farmer in Michigan go to the polls next Tuesday. I want him to see that his neighbor on both sides and in front and back of him goes and votes. I want to see him take his wife by the arm and say, "Put on your sunbonnet or your Sunday-go-to-meetin' hat,(it doesn't make any differerence which), and come with me to the polls."' Do that and the farmers of Michigan will carry the next election.—Editor.

Woman Wins

WOMAN has come into her own. The state has ratified the equal suffrage amendment to the constitution, and for the first time in American history the American woman becomes a free and independent voter.

Through countless years woman, the helpmate of man, has slowly arisen through successive stages of slavery, semi-serfdom, political vassalage, partial enfranchisement, and now to complete citizenship. Endowed by nature with the same capacity for citizenship, bearing most of the burdens of the family life, and carrying at least a part of the responsibilities of citizenship, woman has been persistently denied her right to vote because of sex.

The struggle for equal suffrage has been long, tedious and some times bitter. Like prohibition it had its advances and set-backs. It had its converts and its backsliders. Even the women themselves were divided upon the wisdom or justice in giving woman the ballot. The most bitter opposition, however, has come from the forces that thrived upon the saloon and other immoral institutions. They were frankly afraid of woman's elevating influence in politics. But the level-headed citizens who held the balance of power finally reached the point where they had to concede that there was no harm in giving woman the ballot and that great good might come of it.

So she who bears the children of the world and sits through trying hours nursing them to manhood and womanhood; who manages our households; who shares our disappointments as well as our joys; who endures the darkest crises of failure, sickness and death,—she has come at last into her own. And we are glad.

Business Methods

WE HAVE reached the point in the farming business where its very existence depends upon the employment of certain recognized rules of business. Industrial enterprises succeed because these rules are persistently applied. In the majority of cases the demand for manufactured products must be created. In the farming business the demand is ever present. Some years it is more insistent than others, but it is always there. People may go without automobiles, without furniture, without clothes, even if necessity forces them to do so, but take away their food and they perish. Therefore, the greatest obstacle which encounters any business is in the farming business overcome by the demands of nature herself.

The farmer is, therefore, left fairly free to turn his attention to the best means of production, to the discovery and application of economies in the distributing of his products. By the very nature of his business he can do nothing single-handedly. There are six million farms in the United States each competing with the other. If left to their own devices they could in time all but destroy each other by over-production and the selling of their products below cost. They have virtually been engaged in a destructive competition for years and didn't realize it. But today when the bidding, the supplies and labor between the country and the city is so spirited, forcing the farmer to secure a greater return than ever before from his farm, the need for organized co-operation that will end ruinous competition is clearly seen. The farm organizations are turning their attention more and more to the business end of farming, and while some of our over-cautious city cousins express fears that the organized power of the farmers do not share them.

Candidate-for-Governor Groesbeck says he is opposed to the income tax. That lets him out, so far as the farmers are concerned.

What the Neighbors Say

JOHN HUNT OF HURON COUNTY

As we near another primary election it is well to study our condidates and their past records, and to know just who and what are behind them. This because these are the ones who will make and administer our laws for the next two years—especially the gubernatorial and legislative candidates. They will, to a great extent, decide our welfare for good or evil for some time to come.

It is because, in the past, farmers have not had their rights, have not been fairly represented, and when elected have been so sadly in the minority that the insistant cry is now raised, "A farmer for farmers! A real dirt farmer to work for real dirt farmers!" John Hunt of Bad Axe, candidate for the nomination of State Senator from Huron and Sanilac counties, is just such a man. He has been, is and always will be a farmer himself, not by proxy as so many so-called farmers do their farming. In addition to this he has a lifelong record of active progressive work for the farmers, work in the Grange, Gleaners, insurance and elevator associations, in fact, every line which offers an opportunity to give the farmer a deal a little more nearly square than what he usually gets. . As president of the Bad Axe Farmers' Elevator, Mr. Hunt has made a record of which he may well be proud One of the first co-operative elevators in the state, he has brought it safely through the hard years of experiment and "learning the ropes" into one of the most successful co-operative associations in Michigan. It's business has grown until a turnover of half a million dollars has been reached, with a good profit return to the patrons.

Mr. Hunt has also aided the Co-operative Associatons of the county, proving that he has a co-operative heart. The Huron-Sanilac district choice on State Senator is clearly cut between the two candidates—one, John Hunt, a farmer whose sympathies are with the farmer, the other, a business man, backed by business interests, Senator Forester, who holds an ultra-conservative record as senator. Mr. Farmer, the choice between these two men is up to you.—*Contributed by an M. B. F. subscriber.*

One of the best things that can be said of a man is that he stands well with his neighbors. We have never met Mr. Hunt, but judging from the kind things his friends say about him he must be a pretty good sort of a man and neighbor. We are told that he will be the next senator from his district.—Editor.

WILL VOTE FOR DEBS

I am enclosing herewith a subscription for a new reader, as per your request. I believe that you are doing your best to give us the very best paper possible for the money. Every one I talk with speaks admiringly of it, it is clean and decidedly fair on all subjects as I see it.

When I called at your office several months ago, you may remember that I was a bit skeptical as to where the Farm Bureau would land the farmers. I have endeavored to get all the knowledge possible as to its mission, and I am free to say, that I have much more confidence in it than I did at that time. As I have written and said to you, I am an enthusiast as to the Non-Partisan League as administered in North Dakota. I see no reason why the Farm Bureau cannot do as much, as a national organization. Every voter who desires to aid in a co-operative movement must surely admire the work that the Non-Partisan League has performed in North Dakota and now all its laws and industrial experiments are upheld by the Supreme Courts. I am undecided whom to vote for for President. I am decided that I shall NOT vote for either of the two old parties as Big Business, or Capitalism controls them both and has very plainly dictated their platforms.

The Farmer-Labor party has a good platform, and one that is bound to win in time. I am fully convinced but their candidate is a lawyer, and I have come to distrust men of that profession as a representative of the workers of the world. We all know Eugene V. Debs and although in jail he is true and honest and a man of the people, as was Abraham Lincoln, and, carrying out intrinsic principles of the Altruism which was taught by the great teacher for all time—Jesus of Nazareth. I think I shall vote for principle tho it again goes down in defeat.—*P. P. Miner, Saginaw County, Mich.*

Yes, old friend, the Farm Bureau is working out all right, because you see the rank and file are honest-to-God farmers who can be depended upon to think and act for themselves.—Editor

FARMERS FOR CURRIE

I believe the better informed farmers and voters generally of the tenth congressional district will heartily commend your stand on Congressman of this district. While some of the opponents of Mr. Currie are using arguments which are not facts, to say the least, it is the duty of us voters to find out the truth of these statements before we turn down such a man as Gilbert A. Currie.

Your comment in the M. B. F. answers some of the political hot air that is blowing around Clare county and, no doubt, the rest of the district. There is a lot of sympathy expressed by a very few of the opponents of Mr. Currie for the poor coal miner who has to work eight hours a day, but nothing is said by them of the farmer who works from twelve to fifteen hours to feed them. I am at a loss to know how the farmers of this district can fail to support Mr. Currie, who has been so loyal to them.—*G. V. Clare, Mich.*

I agree with you. Currie's courage in handling the coal strike is likely to cost him the nomination unless the farmers stand loyally by his side. His opponent is using every kind of a promise and every kind of mean and unsportsmanlike tactics to turn the farmers against Currie. But his record stands. I can find nothing in it but what should command the approval and support of the farmers. Were there a serious flaw in the record, the Business Farmer would be the first to find it and expose it. But in the absence of such a flaw we would consider the defeat of Currie by the farmers as a piece of rank ingratitude. We don't believe in that kind of a reward for good services rendered.—Editor.

SANILAC FARMERS IN POLITICS

A mass meeting of the farmer representatives of five townships was held on the evening of August 18, for the purpose of selecting a ticket for the united support of the farmers of Sanilac county.

Much interest was shown and without any difficulty a ticket was chosen as follows: Governor, Milo D. Campbell, Coldwater; State Senator, John Hunt, Bad Axe; State Representative, Chas. F. Burnham, Amadore, as well as full county ticket.

It was decided to style this movement the Sanilac County Farmers' Campaign Club of which the writer was chosen county chairman. An office will be opened immediately in Sandusky and the officers of the cause will be looked after. Arrangements have already been made for mass meetings in four other townships this week and one for next week, others will follow in rapid succession. Even though this movement is started very late we fully expect that our efforts will be noticeable at the primaries. There is no difference of opinion among farmers as to the necessity of such a movement. It is to be regretted that this movement was not started sufficiently early that it might have spread to other counties and even over the entire state. I will keep you well informed upon developments in this county along this line.—*J. G. M., Sandusky.*

Good work! That's the kind of interest that will save the good old U. S. A. from the profiteers and the bolshevists. —Editor.

NEWAYGO DISTRICT

I want to say a few words to you regarding what I know to be the facts in relation to the candidacy of Mr. David Brake of Fremont, and his attitude and standing in his township and Newaygo county generally.

No man in Dayton township where Mr. Brake lives, and no man in Newaygo county has a better record, for honesty and integrity than does he, and I firmly believe that no man in his town or county is better able, or better adapted to aid in legislation for the county and state than is Mr. Brake.

He has the absolute confidence of his people, and as a farmer, Gleaner and Granger, his record stands untarnished. He is a farmer of the first and best type, does his own farming, and should he be nominated and elected as the representative from this county, the farmers of the state need have no concern as to what he will do regarding every measure intended and properly drafted in their favor. But he will be just as sure that they will not have his aid in unfair, and undeserving legislation. He is now serving his township as supervisor, has for the last 18 years, served in some capacity as officer of his township and no man dare to speak any word of disapproval when referring to his manhood and sterling qualities which are necessary in times just like these.—*A. B., White Cloud.*

We are glad to see that Newaygo county is putting up such a high type of farmer for the state legislature. If all the farmer candidates who are in the race this year win out we are going to have one of the best legislatures in the history of the state.—Editor.

CANNOT UNDERSTAND RELIGIOUS INTOLERANCE

In your issue of July 10th you printed a letter from R. F. Lamb criticising your editorial in defense of religious liberty. Lamb's letter would indicate that if he had his way the Catholic church would be wiped out of existence here in America.

It has always been a mystery to us Catholics why it is that in this enlightened age there exists such a spirit of religious intolerance on the part of some Christian people. We can understand this in Anarchists, Bolshevists, Socialists and the like for they hate anything that is a strong bulwark and support to our established form of government, but we fail to understand it in any class of Christian people. I take it that Lamb is a Christian and that he belongs to some rural church. If so, he must be woefully ignorant of the work done in the Catholic school or else he is blindly prejudiced against the Catholic church.

Perhaps he gets his ideas from the "Menace" and swallows its ravings as gospel truth. Better get out among folks, Brother Lamb, and get acquainted with a few Catholics and, if possible, visit some parish school.

Then you can get a real and true knowledge as to just what kind of people Catholics are and you will know just what their parish schools are doing.

If you had a true knowledge of these matters and if you are a genuine Christian, you never would be guilty of making such an insulting remark as you did in your communication when you spoke about "an alien pope forcing his alien system upon a free American people and innocent children."

Of course if you are a Socialist nothing more need be said. We can understand your venom.—*William Bennett, Livingston County.*

SANILAC POLITICS

At a mass meeting of the Townships of Elmer, Flynn, Maple Valley, Washington and Watertown, Sanilac county, the following ticket was selected for the united support of the farmers:

Governor, Milo D. Campbell, State Senator, John Hunt, Bad Axe; State Representative, Chas. F. Burnham; Sheriff, John A. Johnson; Probate Judge, Grant H. Smith; County Clerk Garfield M. Benedict; Treasurer, George Donaldson, Drain Commissioner, Bert R. Walker; Prosecuting Attorney, R. J. West; Register of Deeds, Wm. Robsinson.

It is hoped that such action will be taken in every township and every farmer should consider himself a committee of one to see that immediate action is taken.—*John W. Goodwine, Chairman .Sandusky, Mich.*

READING BIBLE IN SCHOOLS

I was much interested in the articles on the parochial schools in the M. B. F. Personally I have nothing against the parochial schools for I know nothing about them. But, pray why do our Catholic friends object to having the Bible read in the public schools. At our last school meeting a Catholic woman said to me that a certain Methodist wasn't fit to serve on the school board because he wanted the Bible read in school! We have one God and one flag and one constitution and if our Catholic friends are "one hundred per cent live and let live Americans, why do they object to anything of this kind? We are told that only Christianity (not creed) and clean politics will ever save this country of ours.—*Mrs. A. M. W., Mich.*

TROUBLE WITH IRELAND

I would like to meet you and shake your hand for I think you print the best paper in circulation, and I am proud of you. You are the stuff. But I am surprised at you and ex-governor Ferris in the stand you take about the parochial school. If you are for America, public schools, public cemetaries and

(*Continued on page* 13)

The Week's Editorial

THE GROWER'S PRICE

Can farmers fix prices?

This they propose to do, according to C. A. Lyman, secretary, National Board of Farm Organizations, by formation of marketing agencies, by storage of surplus, and by prevention of overproduction.

Farmers believe, says Lyman, that they aren't getting enough profit out of the production of food. They insist farming isn't a paying business now; that is why so many rural people are flocking to cities. They would eliminate the middleman by occupying that position themselves. They would deal more directly with the ultimate consumer which may or may not lower prices consumers pay. It would, however, increase the farmer's margin of profit.

The monumental program Lyman suggests, is nothing other than a food growers' trust. Farmers would deliver their product to their national marketing company, which in turn would direct it to the market where it was most sorely needed and where by reason of that need the prices are highest.

When the prices there dropped below other markets food would be shifted elsewhere. Surplus stores would be held in refrigerator plants, warehouses, elevators, all under farmer control. Now they are stored under miller, grain dealer, packer, speculator control.

Obviously the city consumer would be no worse off. He would be changing his master; that's all. Instead of contributing to the support of a few manipulators of food products, he would be handing the money over to a larger body of farmer-controllers. This must be remembered: farmers have expressed no intention of forming their food trust to fill the city housewife's market basket at a lower price. They are going into it to fatten their own pocketbooks.

What, then, should the city consumer do?

He should do as the producers threaten to do—get together, co-operate. He should meet the producer half way. He should eliminate the parasites that prey upon him. The only antidote for a selling trust is a buying trust.—*Detroit Times.*

The Farm Home
A Department for the Women

Edited by CLARE NORRIS

I PROMISED you in last week's issue that I would publish more letters and the names of the prize winners in this issue, but, owing to the small amount of space this week I am unable to publish more letters, and as letters continue to come in I can not award the prizes. Next week I will publish the names of the prize winners if possible, and if I cannot publish the letters at that time I will use them as soon as I have space available, because I feel that all contain helpful information.

All letters answering the question in the August 21st issue must be in my hands by Tuesday, September 7th and the names of prize winners will be published in the September 11th issue.—CLARE NORRIS.

KITCHEN UTENSILS

IN OUR present day and age we know that half the worth of living is in fully enjoying the things about us and in having things about us that we can enjoy. Every homemaker spends a great share of her time in the kitchen, and by careful selection of its furnishings, she can make her work not merely a duty but a pleasure.

We cannot afford to throw away our old utensils, but a knowledge of good materials in the utensil line, will enable us to replace worn out dishes with the proper new ones. Tin pans are well adapted for cake making, as tin does not scorch, heats quickly and responds rapidly to the necessary regulation of temperature during baking. It is light, inexpensive, and a good conductor of heat. The quality of tin may be determined by noting how a piece is marked, X being the cheapest and XXXX the best quality. No acid foods should be cooked in tin as the two form a harmful combination.

For bread, Russian Iron, a sheet iron having a polished blue-black surface is preferable, as it absorbs heat, is durable and is not affected by high temperatures.

For saueting, deep fat frying and pot roasts there is nothing better than iron utensils. Granite and enamel ware, which are made by coating sheet iron with enamel, or glaze, is excellent for stewing and boiling. Acids have no effect on enamel unless it is chipped so that the iron is exposed.

Aluminum utensils are light, well made, easily cleaned and excellent conductors of heat. They are used for all sorts of cooking.

Nickle plated ware is made by coating iron with melted nickle. This takes a high polish, does not rust and is easily kept clean.

Fireproof earthenware is now made into a variety of shapes called casseroles. Food may be both cooked and served in these dishes. Glass baking dishes are now on the market. They may be used in the same way. Bread pans, cake dishes and pie plates are also made of glass. This ware permits the home-maker to watch the baking as the glass is transparent.

In the culinary line there are many varieties to choose from. In selecting wooden handled knives, the best kind are those in which the steel extends the full length of the handle. A good assortment includes bread knife, butcher knife, vegetable knife, cake knife and spatula. For all around use a dover egg beater is best. A flat wire beater gives the airest texture for sponge cake and angel cake. Hard wood spoons are good as they are light, do not scratch or discolor the hand. For basting a turned iron spoon may be used.

Nobody Knows—But Mother

Nobody know of the work it makes
To keep the home together,
Nobody knows of the st°ps it takes,
Nobody knows—but mother.

Nobody listens to childish woes,
Which kisses only smother;
Nobody's pained by naughty blows,
Nobody—only mother.

Nobody knows of the sleepless care
Bestowed on baby brother;
Nobody knows of the tender prayer,
Nobody—only mother.

Nobody knows of the lessons taught
Of loving one another;
Nobody knows of the patience sought,
Nobody—only mother.

Nobody knows of the anxious fears
Lest darlings may not weather
The storm of life in after years,
Nobody knows—but mother.

Nobody kneels at the throne above
To thank the Heavenly Father
For that sweetest gift—a mother's love;
Nobody can—but mother.

—The Fireside.

CAUSE OF IRON RUST IN CLOTH

Will you please tell me through The Business Farmer the cause of iron rust appearing in cotton fabric after being washed, and thereby oblige—Mrs. J. T. D., St. Johns, Michigan.

There may be several causes for the iron rust spots appearing in the clothing. Some parts of the washing utensils may be worn, and any clothes touching those parts become stained. Thorough examination of all working equipment is advisable to see if the trouble can be located.

The water in different sections of the state contains a comparatively large amount of iron. I do not know whether this is true of your section or not. Previous boiling of this water would aid in removing some of the trouble.

The most frequent cause of iron rust in clothing after washing, however is the type of bluing used. Liquid bluing usually is a Prussian blue, or ferric ferrocyanide. This iron in the bluing is precipitated by strong alkalies, such as washing soaps, washing soda, ammonia, etc. Therefore, if the clothes are not rinsed free from these alkalies the alkali remaining on the clothes precipitates the iron, causing rust stains. —*Mary E. Edmonds, Division of Home Economics, M. A. C.*

To Remove Iron Rust

Use one of the agents given below for iron rust stains on white washable materials. In the case of colored materials, try the effect of the agent first on a sample or in an inconspicuous place.

1. Cream of tartar (potassium acid tartrate.) Boil the stained place in a solution of 4 teaspoonfuls to one pint of water until the stain completely disappears, then rinse This agent, owing to its cost, is practicable only for stains upon small articles which can be immersed and boiled in a cup or two of solution, though it may be used in the case of larger articles by holding them above the solution in such a way that only the stained portion is immersed.

2. Lemon juice. Spread the stained place over a vessel of actively boiling water, and then squeeze lemon juice on the stain. After a few minutes rinse the stain and repeat the process. This method is rather slow but does not injure delicate white cotton or linen fabrics.

3. Lemon juice and salt. Sprinkle the stain with salt, moisten with lemon juice and place in the sun, more lemon juice being added if necessary.

4. Acid fruits or vegetables. Those mentioned below are satisfactory and have the advantage of being found in the home garden or easily purchased. Others can not be used because their juices are so highly colored as to leave stains themselves on the fabric. The use of lemon juice has been described above.

5. Rhubarb stalks. One stalk cut up and boiled in one cup of water, gives a solution strong enough to dissolve iron rust. If the stalks have highly colored skins peel them before using. Boil the stain in the solution for 15 minutes or longer, if necessary.

The Children's Hour

DEAR CHILDREN: I have received so many stories about animals lately from our boys and girls that I have been wondering if you wouldn't like to have me publish some stories I have about birds. They are written by people that know the birds and how they live and everything. Each story has a picture with it of the bird. They are about nearly a hundred different birds, such as the robin, the wren, the swallow and other birds that we know on the farm. There are also some birds we do not know so much about. Would you like to have me publish them on our page?. Affectionately yours—AUNT CLARE.

OUR BOYS AND GIRRLS

Dear Aunt Clare—Well I will try and write you another letter as I see others have written the second time, and it was quite a while ago that I wrote before.

Vacation will soon be gone and the good old school days will be here again. I expect you have had some time on your vacation haven't you? Last week an auto load from here went fishing to a lake about 20 miles away, and we sure had some time. The fish were not very large and we only caught seventy-five all together but we had the fun going and coming back, also riding in the boats.

I have not only had a good time playing and going somewhere this summer but I have helped my father and mother [illegible] the beans and corn, then [illegible] I helped in that by driving on the loader and driving the team to unload it in the barn.

Do you print any drawings in your paper that do not get a prize? Why I ask this is because quite a while ago I sent in a picture that I had drawn, and later on I was surprised to open the M. B. F. one Saturday and to see the very picture on our page with two others, and in your letter you said those three took the prize. This is why I was wondering, because I did not get any thing if I should of. Please tell in your next letter whether you award prizes to all of those whose drawings are printed. As my letter is getting long I will close, hoping you will answer my questions, I remain your friend, Arlone Wilkinson Perry, Mich., R 3.

Dear Aunt Clare—I have written to you once before but did not see my letter in print. My father takes the M. B. F. and we like it very much . I like to read the Children's Hour. I am 9 years old and will be in the sixth grade next year. Our teacher's name is Miss Austin. I am taking music lessons. We live on a farm of sixty acres and have 4 cows, 2 horses, 97 hens, 75 chicks and 15 sheep. For a pet I have 1 kitten. he has a bobbed tail.

I hope my letter will escape the waste basket. Nadine E. Delling, Ithaca, Mich.

Dear Aunt Clare:—I just finished reading the stories of the boys and girls and thought I would write too. I am a girl nine years old and will be in the fourth grade this fall. For pets I have an old cat and four little ones. I have lived on a farm about four years and I enjoy it. We have 2 horses and 2 cows and a little calf and 7 little pigs. My grandpa takes the M. B. F. and I like to read the Children's Hour. Hoping to see my letter in print. Sarah Bell May Remus, Mich., Box 15.

Dear Aunt Clare—I am a boy 9 years old and am in the fifth grade. My father takes the M. B. F. and likes it very well. For pets I have a cat. I have four brothers and three sisters. We do not have a farm. My father is a school teacher. I enjoy reading the other boys and girls letters. We have a horse and a cow and 2 pigs. We work on the farm during vacation. I will be glad when school starts again. I hope to see my letter in print. Kurt Yohrmann, Bay City, R 5.

Dear Aunt Clare—This is the first time I have written to you. I am a girl 8 years of age and will be 9 the 7th of September. I will be in the 5th grade at school. For pets we have a cat and a dog. I have two sisters and three brothers. We have four horses and 9 milch cows. We take the M. B. F. and like it very much. Hoping to see my letter in print. Nina Churchill, Imlay City, Mich.

Dear Aunt Clare—I am a boy 10 years of age. I live on a 200 acre farm. We take the M. B. F. and like it very much. For pets I have 2 shet'and ponies, their names are Beauty and Sargant, 4 rabbits and 3 lambs. Hoping to see my letter in print. Philip Watts, Tawas City, Mich

Dear Aunt Clare—I will write you a few lines to let you know I am awake. I am a little girl 8 years old. My teacher is Miss Ferguson. I am in the 4th grade. We have 12 cows and 4 pigs and 30 sheep and 3 horses and a flower garden. Well will close for this time. Lois Hatz.

Dear Aunt Clar—I am a girl 11 years old. I am in the sixth grade. My teachers name is Miss Ferguson. We have a 160 acre farm. We have 19 head of cattle, 67 sheep, 3 horses and 4 pigs. I have 2 ducks and a kiten fo rmy own. I have two sisters and one brother. We send milk to the condensary at Cass City. The condensary is giving the farmers a picnic free of charge. I saw the poem that Beatrice McKeon sent in and I hope she sends some more. Well I will close and I hope this will miss the waste paper basket. Luella J. Holtz Cass City, Mich.

Dear Aunt Clare—How are you. I am well. I like to read the Children's page. My other sister is writing a letter to you. I have three sisters. We have two kittens and two cats. Our school starts the 6th of September. My papa has taken the Michigan Business Farmer ever since it started. We just got a Michigan Business Farmer today. I and one of my sisters just got the mail. We are on route two but my papa is carrier on route one. Goodbye, hoping to hear from you soon.—Rosa Armock. Alanson, Mich.

Dear Aunt Clare—This is the first I have written to you. My father takes the Michigan Business Farmer and likes it fine. I have three sisters. I am ten years old. My sisters names are Rosa, Lela and Mae. Rosa is in the 4th grade. My father has taken the M. B. F. ever since it started. We have 7 cows and two horses and four calves. We have two kittens and two cats. I will close for this time. Maude Armock, Alanson, Mich.

Author of the "Valley of the Moon," and other stories.

CHAPTER XXVI.

FRANCIS had left orders for Parker to call him at eight o'clock, and when Parker softly entered he found his master still asleep. Turning on the water in the bathroom and preparing the shaving gear, the valet re-entered the bedroom. Still moving softly about so that his master would have the advantage of the last possible second of sleep, Parker's eyes lighted on the strange dagger that stood upright, its point pinning through a note and a photograph and into the hard wood of the dresser top. For a long time he gazed at the strange array, then, without hesitation, carefully opened the door to Mrs. Morgan's room and peeped in. Next, he firmly shook Francis by the shoulder.

The latter's eyes opened, for a second betraying the incomprehension of the sleeper suddenly awakened, then lighting with recognition and memory of the waking order he had left the previous night.

"Time to get up sir," the valet murmured.

"Which is ever an ill time," Francis yawned with a smile. He closed his eyes with a, "Let me lie a minute Parker, If I doze, shake me."

But Parker shook him immediately.

"You must get up right away, sir. I think something has happened to Mrs. Morgan. She is not in her room and there is a queer note and a knife here that may explain. I don't know sir——"

Francis was out of bed in a bound, staring one moment at the dagger, and next drawing it out, reading the note over and over as if its simple meaning, contained in two simple words, were too abstruse for his comprehension.

"Adios forever," said the note.

What shocked him even more, was the dagger thrust between Leoncia's eyes, and, as he stared at the wound made in the thin cardboard, it came to him that he had seen this very thing before, and he remembered back to the lake dwelling of the Queen when all had gazed into the golden bowl and seen variously, and, when he had seen Leoncia's face on the strange liquid metal with the knife thrust between the eyes. He even put the dagger back into the cardboard wound and stared at it some more.

The explanation was obvious. The Queen had betrayed jealousy against Leoncia from the first, and here, in New York, finding her rival's photograph on her husband's dresser, had no more missed the true conclusion than had she missed the pictured features with her point of steel. But where was she? Where had she gone?—she who was the veriest stranger that ever entered the great city, who called the telephone the magic of the flying speech, who thot of Wall Street as a temple, and regarded Business as the New York man's god. For all the world she was as unsophisticated and innocent of a great city as had she been a traveler from Mars. Where and how had she passed the night? Where was she now? Was she even alive?

Visions of the morgue with its unidentified dead, and of bodies drifting out to sea on the ebb, rushed into his brain. It was Parker who steadied him back to himself.

"Is there anything I can do, sir? Shall I call up the detective bureau? Your father always——"

"Yes, yes," Francis interrupted quickly. "There was one man he employed more than all others, a young man with the Pinkertons—do youy remember his name "

"Birchman, sir," Parker answered promptly, moving away. "I shall send for him to come at once."

And thereupon in the quest after his wife, Francis entered upon a series of adventures that were to him a born New Yorker, a liberal education in conditions and phases of New York of which, up to that time, he had been profoundly ignorant. Not alone did Birchman search, but he had at work a score of detective under him who fine-tooth combed the city, while in Chicago and Boston, he directed the activities of similar men.

Between this battle with the unguessed enemy of Wall Street, and the frequent calls he received to go here and there and everywhere, on th spur of the moment, to identify what might possibly be his wife, Francis led anything but a boresome existence. He forgot what regular hours of sleep were, and grew accustomed to being dragged from luncheon or dinner, or of being routed out of his bed, to respond to hurry calls to come and look over new-found missing ladies. No trace of one answering her description, who had left the city by train or steamer had been discovered, and Birchman assiduously pursued his fine-tooth combing, convinced that she was still in the city.

Thus, Francis took trips to Mattewan and down Blackwell's, and the Tombs and the All-Night court knew his presence. Nor did he escape being dragged to countless hospitals nor to the Morgue. Once, a fresh-caught shoplifter, of whom there was no criminal record and to whom there was no clew of identity, was brought to his notice. He had adventures with mysterious women cornered by Birchman's satellites in the back rooms of Raines' Hotels, and, on the West Side, in the Fifties was guilty of trespassing upon two comparatively innocent love-idyls, to the embarrassment of all concerned including himself.

Perhaps the most interesting and tragic adventure was in the ten million dollar manion of Philip January, the Telluride mining king. The strange woman, a lady slender, had wandered in upon the Januarys a week before, ere Francis came to see her. And, as she had heartbreakingly done for the entire week, so she heartbreakingly did for Francis, wringing her hands, perpetually weeping and murmuring beseechingly: "Otho, you are wrong. On my knees I tell you you are wrong. Otho you and you only, do I love. There is no one but you, Otho. There has never been any one but you. It is all a dreadful mistake."

And through it all, the Wall Street battle went on against the undiscoverable and powerful enemy who had launched what Francis and Bascom could not avoid acknowledging was a catastrophic, war-to-the-death raid on his fortune.

"If only we can avoid throwing Tampico Petroleum into the whirlpool," Bascom prayed.

"I look to Tampico Petroleum to save me," Francis replied. "When every security I can lay hand to has been engulfed, then, throwing in Tampico Petroleum will be like the eruption of a new army upon a losing field."

"And suppose your unknown foe is powerful enough to swallow down that final, splendid asset and clamor for more?" Bascom queried.

"Then I shall be broke. But my father went broke half a dozen times before he won out. Also was he born broke. I should worry about a little thing like that."

For a time, in the Solano haciendа, events had been moving slowly. In fact, following upon the rescue of Leoncia by Henry along his dynamite-sown trail, there had been no events. Not even Yi Poon appeared with a perfectly fresh and entirely brand new secret to sell. Nothing had happened, save that Leoncia drooped and was apathetic, that neither Enrico nor Henry, her full brother, nor her Solano brothers who were not her brothers at all, could cheer her.

But, while Leoncia drooped, Henry and the tall sons of Enrico worried and perplexed themselves about the treasure in the Valley of the Lost Souls, into which Torres was even then dynamiting his way. One thing they did know, namely, that the Torres' expedition had sent Augustino and Vicente back to San Antonio to get two more mule loads of dynamite.

It was Henry, after conferring with Enrico and obtaining his permission, who broached the matter to Leoncia.

"Sweet sister," had been his way, "we're going to go up and see what that scoundrel Torres and his gang are doing. We do know, thanks to you, their objective. The dynamite is to blow an entrance into the Valley. We know where the Lady Who Dreams sank her treasure when her house burned. Torres does not know this. The idea is that we can follow them into the Valley, when they have drained the Maya caves, and have as good a chance, if not a better chance than they in getting possession of that marvelous chest of gems. And the very tip of the point is that we'd like to take you along on the expedition. I fancy, if we managed to get the treasure ourselves, that you wouldn't mind repeating that journey down the subterranean river."

(Continued next week)

THE SIGN OF ROWENA QUALITY

Results in Baking Test the Quality of Flour

There is all the difference in the world in the quality of flour. Everything depends upon the kind of wheat used and the methods used in converting the raw material into the finished article.

Lily White

"The Flour the Best Cooks Use"

has maintained a reputation for unsurpassed quality for generations. It is made from the choicest selection of wheat grown in this country. The grain is thoroughly cleaned, scoured and washed before being milled. The part of each grain of wheat that finally is milled is only the heart of the kernel. The result is a flour of incomparable quality—perfect uniformity of granulation, color and volume. It is perfectly balanced to bake well and to give the highest values in nutrition.

Look for the ROWENA trade-mark on the sack

Bread and rolls baked from LILY WHITE are of splendid color and have a flavor that is appetizingly palatable. Biscuits are light, tender and delicious—never flat, thin or soggy. Piecrust is flaky—just like French Pastry.

No food is healthy and nourishing as breadstuffs made from high-grade flour. LILY WHITE is guaranteed to give satisfaction.

Ask for LILY WHITE at your dealer's.

MARKET FLASHES

TRADE AND MARKET REVIEW

On Thursday, August 26, the higher freight and passenger rates allowed the railroads by the Interstate Commerce Commission take effect, and on September 1st the government guarantee to the roads expires. After that date it will be up to the railroads to make good. If they do not the public who pays the freight will lay the blame for the breakdown in railroad service where it rightly belongs. Railroad officials say that with the expiration of the government guarantee the roads will be able to give better service; in fact, they say that already employees are showing increased efficiency, and former employees are drifting back to work. That better results are obtained from the employees is shown by the increased movement of freight cars. Cars that ran 22.3 miles a few months ago are running 26 miles today, and officials hope to get the average up to 30 miles within the next few months. Every additional mile run by the average freight car is equal to an increase of 90,000 additional freight cars, officials claim.

According to reports, railroad officials in the west are very optimistic over the traffic outlook, and are quoted as saying that the traffic situation is rapidly nearing normal, owing to the lessening of demand for cars from various industries. In spite of this let-up in demand for freight cars business is in a very healthy condition. In some industries the plants are running on part time schedules, but general reports indicate that labor is well employed except in a few instances. There seems to be quite a plentiful supply of cars in the west appropriate for the shipping of grain, and western farmers are rapidly marketing their grain at good prices.

The credit situation is somewhat easier, and the demand for money to move crops is being met. Bankers know that the farmers have to have money to move their crops, and if the money is not furnished so that crops can be moved the world will have to go hungry. So, if necessary, they will shut down on credit to other industries in order to make this essential loan to the farmers.

Wholesale prices on commodities have been traveling downward for some time, but until just recently retail prices have been going upward. An official statement was published a few days ago that retail prices advanced several per cent between June 15th and July 15th, but it appears now that a decline has set in and the cost of living to the consumer is coming down.

Crops are turning out fine. Some states report that they wil have one of the largest crops in their history. Corn is in fine condition and the outlook is for a bumper yield in nearly all states. Winter wheat yields, in general are reported fairly good. Most of the spring wheat is harvested, but not much threshing done yet. Yields are not expected to be as good as winter wheat. Oats are yielding well in most sections, but reports of the rye yield are not so good. Other farm crops are averaging fair to excellent.

LAST MINUTE WIRES

DETROIT—Wheat, corn and rye advance on export demand. Oats decline 8c. Beans off 15c. Hay takes $1 drop.

CHICAGO—Export demand carries all grains higher. Cattle average higher. Hogs down 30c. Potatoes stronger.

(Note: The above summarized wires are received AFTER the balance of the market page is set in type. They contain last minute information up to within one-half hour of going to press.—Editor.

WHEAT HIGHER

There is a bearish feeling in the wheat market, owing to some active export buying, the price is not working much lower. The war talk, which caused wild fluctuations in the market a couple of weeks ago, continues to take on a more optimistic look, and as cars are becoming more plentiful every day, dealers are inclined to believe that the only thing that will keep prices from going lower will be small receipts at the markets and a large demand. Receipts of wheat has been rather small the past week, much to the disappointment of dealers. There is practically no wheat for sale on the Chicago market, as dealers say that most of the grain is sold on the "to arrive at" to fill orders taken some time ago. Italy and Holland are the main exporters in the market at present, the British having withdrawn about ten days ago, but they are expected to resume trading at any time now.

WHEAT PRICES PER BU., AUG. 24, 1920			
Grade	Detroit	Chicago	N. Y.
No. 2 Red	2 52	2.47⅛	2.65

No. 2 Red	2.24		2.35½
No. 2 White	2.22		2.43
No 2 Mixed	2.22		2.32

Organized farmers in Kansas, Nebraska, Oklahoma and Missouri held a meeting recently at which they adopted the slogan "Three dollar wheat or no wheat." These farmers claim that recent declines in grain prices are due to manipulation, and say that the declines suffered by the grain markets during the past month or so have been most unfair. They exhibited charts that showed that wheat at $2 a bushel means a loss of 77c. Of course, if this movement becomes widespread the price of wheat is apt to advance to that level, but very slowly, as dealers will feel that farmers will sell at a slighly lower figure if they think they are not going to get any more.

There is quite a surplus of wheat in the country and if the $3 movement confines itself to the four states mentioned there is not much chance of its affecting prices for some time at least.

Canada estimates that she will have a wheat crop of 262,338,000 bushels this year, against 193,260,000 bushels last year, so we are going to have some stiff competition in export trading from our neighbor.

CORN LOWER

CORN PRICES PER BU., AUG. 24, 1920			
Grade	Detroit	Chicago	N. Y.
No. 2 Yellow	1.67	1.63½	1.79
No. 3 Yellow

No. 3 Yellow	2.08	1.98	2.13
No. 4 Yellow	2.06	1.96	2.11

The corn market is in a very nervous state as dealers are fearing an early frost and are afraid to sell very heavily. The selling may be fairly free, then someone predicts cold weather and sellers rush to cover. Crop news have improved during the current week. Some sections have been suffering from drought but recent rains have taken care of this trouble in most of the places. There will be some soft corn this fall in spite of how ideal the weather is from now on, especially in Illinois and Indiana as the crop is very late in those state. We look for lower prices in corn up to the first of the year, after that we would not be surprised if prices took a turn for the better. Farmers are not offering to sell their old corn very freely, but this bullish feature is counteracted by the inclination of the corn consuming industries to keep out of the market. They do not like the present height of the prices.

OATS FIRM

OAT PRICES PER BU., AUGUST 24, 1920			
Grade	Detroit	Chicago	N. Y.
No. 2 White	.98	.71	.90
No. 3 White	.97	.89½	.88

Standard	.80	.76	.87
No. 3 White	.79½	.75	.86
No. 4 White	.78½	.74	.85

Receipts of oats increased the past week and demand dropped off some. Last Saturday Detroit received 6 cars of oats, against 3 cars of rye and 1 of wheat. The quality of grain arriving at markets is good and averages heavier than last year. There has been some inquiries from Europe for this grain but it is doubtful if any will be sold as it will be needed in this country, especially if early frosts get the corn. Oats and corn go hand in hand and what affects the price of one affects the price of the other. According to the government reports the crop is yielding above the average throughout the Union.

The Canadian government reports that they will have about 496,966,400 bushels, or over a million bushels more than they harvested in 1919.

RYE DROPS

Rye decline 5c during the current week on the Detroit market but is inclined to be firm now at $2 for No. 2. Receipts of rye continue small and demand good. As long as this condition remains the price will not decline much. There is also quite an active export demand. Reports have come from the seaboard recently of export sales of 250,000 bushels over night.

BEANS STEADY

BEAN PRICES PER CWT., AUG. 24, 1920			
Grade	Detroit	Chicago	N. Y.

C. H. P.	8.10		
Prime Red Kidneys			

There has been no declines in the Detroit market since the last issue of this paper. Chicago prices are holding well, but New York reports beans off 50c. Although the bean market is inactive there is a steady feeling and we would not be surprised to see the market remain steady for a time and then advance. The August 1st forecast by the government for the six leading bean states was as follows: New York, 961,000 bushels; Michigan, 3,194,000 bushels Colorado, 636,000 bushels; New Mexico, 886,000; Arizona, 76,000; California, 3,321,000 bushels.

POTATOES WEAK

PRICES ONE YEAR AGO		
Detroit	5.00	
Chicago	3.00	
Pittsburg		
New York		

There is a plentiful supply of potatoes on all markets and lower prices are in style. The Detroit market is amply supplied and easy. Heavy receipts, light demand, the August crop report, and a general downward tendency, to all lines of produce forced potatoes down at Chicago to the lowest level they have seen in a good many months. Potatoes are mighty poor property to have in New York right now and this fact is cutting into the movement of this product to that point. Many eastern potato men are ship-

Markets, both East and West, are steady to higher this week under reduced holdings and lighter offerings. The recent influx of hay and consequent reduction in price kept further shipments back until now the markets have been cleaning up and a better feeling prevails. New hay is arriving at nearly all points, but its condition is still unsatisfactory.—*Hay Trade Journal.*

THE LIVESTOCK MARKET
By H. H. Mack

The average prices paid for killing cattle in the leading markets of the country last week were lower than for any preceding date this year and for the corresponding date in any preceeding year for some time back. The average price of good steers in Chicago last week was $14.85 per cwt., being 5 cents lower than that of last week, $1.10 lower than the corresponding week of last year and 75 cents lower than two weeks ago. Owing to small receipts, the Detroit market showed slightly higher last week than the week before. On Monday of this week, Detroit cattle values were quoted full strong with last week's general average.

Country buyers who frequent the Detroit market report the existence of some dissatisfaction on the part of growers and some co-operative shippers, because of the low average prices that have ruled the local trade in Michigan cattle during the past two months; it is safe to assume, however, that if the farmers who are criticising the Detroit cattle market understood the butcher business as well as they understand the details of farming, they would have no criticisms to offer.

The producer should not forget that every animal, which is sold alive in the Detroit market, must be sold again to dealers who will display it in their shops and cut from it, small retails orders for their customers. The grass cattle that have reached this market so far this year from Michigan have yielded the smallest dressing percentages ever known in the local market; the question of dressing percentages is an important one, it is true, but the wholesaler of meats must look much farther than this if he wishes to hold his trade.

The vender of fresh meats at retail is governed, to a great degree in his selection of daily supplies, by the expressed personal preferences of his customers; he has an advantage over the killer in that he sees the meat, sans the hide, but his customers is on an equal footing with him in this respect and as he has frequently learned to his sorrow in the past, does not hesitate to criticise when quality is lacking. The buyer in the public market must not forget that the bullock, which is offered for his inspection, must past muster on the retailer's block and on the table of the consumer; the country producer, also, should not overlook this important fact. Michigan cattle have been slow sellers in all markets all through August, the quality being the poorest ever known so late in the summer season. Local killers have had a regular supply of western cattle, nearly all of which have dressed out satisfactorialy and have yielded a good average quality of beef.

Trade in Sheep and Lambs

Sheep and lamb prices were weak all last week, prices showing the lowest general averages for the season so far, and, in fact, the lowest registered in the month of August during the last three years. The general average price for fat sheep, last week, was $7.45 being 40 cents lower than the previous week, $2.80 lower than the corresponding week, last year and $5.30 lower than two years ago.

The general average price ror fat lambs in Chicago, last week, was $12.40, being the lowest, with one exception, since early in 1916; this average was 95 cents per cwt. lower than that of the previous week, $4.95 lower than one year ago and $5.35 lower than two years ago. Detroit had a dull sheep and lamb trade all last week but as a result of a small run on last Monday prices were somewhat higher on that date; the same was true of the Chicago sheep and lamb trade on Monday, August 23.

Live Hogs and Provisions

Experienced operators in the live hog market find it difficult to understand the antics of the current market, especially when the extremely small current receipts are taken into consideration. The strongest bull argument, in connection with the current live hog trade, is the scarcity of finished hogs throughout the country, drovers and killers, generally, finding it very difficult to secure finished hogs enough to supply the pressing needs of their trade.

The predominant bear influence, in connection with the current live hog trade, is the dullness and drooping tendency of speculative provision values; a belief is becoming quite general, however, that the speculative provision market has gone one way just about long enough for the present and a change for the better may be looked for in the near future. Germany has been taking our lard quite freely of late and weekly exportation reports are making a healthy showing.

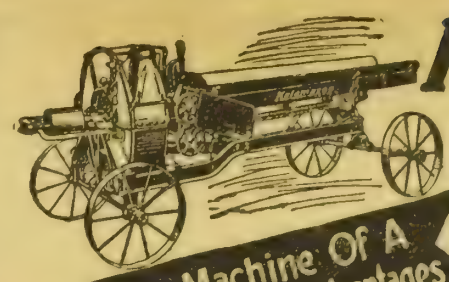
The average weight of the hogs coming to hand throughout the country is increasing rapidly and, thanks to the improved lard demand, heavy hogs are selling much better than formerly; rumor has it that Buffalo is shipping heavy rough hogs to Chicago where quotations show prices for this kind to be higher in any other market in the country. The top in Chicago, last week, for live hogs was $16.15; this price was 20 cents lower than the previous week and $5.75 lower than one year ago. The quality of the hogs that have come to hand in Detroit during the last ten days have been extremely common. Prices for mixed hogs have ranged from $15.40 to $15.75. Only a few prime hogs showed up, locally, on Monday of this week, the top being $15.60.

U. P. FARMERS MEET IN SUCCESSFUL ROUND-UP

(*Continued from page* 4)

being in attendance. The forenoon the sky was overcast and rain fell which undoubtedly prevented many others from coming. A big barbecue dinner, consisting of roast ox, mashed potatoes, baked beans, sweet corn, buns, coffee and ice cream was prepared under the direction of the Marquette prison chef, Mr. Deagon, and it was a delightful affair from beginning to end. The county's after dinner speaker was Sen. Vandenboom, who was responded to by Hon. Jason Woodman, member of the Board of Agriculture. The speaking program which followed was of rare quality and made all to feel that they had not spent their time in vain. The ladies came in for their share of entertainment and instruction as per schedule. The attendance was large and the interest keen. At the milk booth which proved very popular over 50 gallons of different kinds of milk drinks were given away. The purpose of this novel feature was to popularize the drinking of milk.

All in all, the Chatham Round-up was a splendid success and the interest on the part of the farmers was such as to fully repay all who were responsible for the Round-up in full measure for their efforts. ertainly there is no better way in which to get the farmers together and impress upon them the value of the work that is being done by the agricultural agencies of the state.



Kalamazoo CUTTERS
Order Yours NOW

The Machine Of A Dozen Distinct Advantages

Delays won't mix with ensilage to make profit. It don't pay to depend on railroads, community cutters, or custom fillers—Silo your crop quickly—when it's exactly right.

FARMERS Remember you have this year an opportunity for the first time in many years to vote for a real farmer for the nomination for Governor. Lieutenant Governor LUREN D. DICKINSON, as it is well known, is the only farmer candidate living on a farm among all the candidates on all the tickets. As Representative, Senator or Lieutenant Governor, no farmer has criticised his loyalty to your interests.

AMERICAN LEGION

Remember Lieutenant Governor Dickinson was the official who started the move to give the veterans decent pay for their services.

TEMPERANCE VOTERS

Remember Mr. Dickinson has for years been Michigan's dry leader and four years ago he turned down the governorship to make Michigan dry. The wets have started the fight to again legalize the liquor traffic and Mr. Dickinson is the man needed now to guard the temperance interests.

MEN AND WOMEN

who want clean politics, remember that Mr. Dickinson, at the risk of his political future, alone and single handed, in the interest of purer politics, condemned the sale of nominations for office and demanded a fair deal for the poor but capable candidate.

VOTERS

When you go to the primary, remember you have not seen a criticism by the farmer, the laborer, the business man or any good citizen of Mr. Dickinson's loyalty, sincerity, honesty, ability or courage in conducting the affairs of the offices he has held. You take no risk in voting for him at the primary for Governor.

CHARLES HOFFNER,
Master of Eaton County Pomona Grange,
Chairman Dickinson Farmer Committee.

Don't just talk about it. Our Business Farmers' Exchange gets results. Address The Michigan Business Farmer, Adv. Dept., Mt. Clemens.

FARMERS SERVICE BUREAU

MULLEIN NON-OFFICIAL DRUG

Can you tell me if the weed called mullein is of any medical value? Also how can I get more information about weeds or plants by just writing? What can I get to put in a home-made medicine to keep it from souring or moulding?—G. A. W., Gladwin County.

The common mullein (Verbascum thapsus) was formerly listed as one of the official medicines in the various dispensatories. It has not, however, been considered official for a good many years, although it is still listed among the non-official drugs in the 20th edition of the United States Dispensatory, published in 1918. Both the dried flowers and the dried leaves are used, the former under the name of Verbasci Flores and the latter Verbasci Folia. I quote what this dispensatory says concerning the medicinial value.

"Mullein leaves are demulcent and emollient, and are thought to possess anodyne properties, which render them useful in pectoral complaints. On the continent of Europe, an infusion of the flowers, strained in order to separate the rough hairs, is considerably used in mild catarrhs. An oil, produced by saturating olive oil with mullein flowers, during prolonged exposure to the sun, is used as a local application in Germany for piles and other mucous membrane inflammations. The mullein oils sold in pharmacies are of this nature or some of them alcholic tinctures. The dried leaves are sometimes smoked to relieve irritation of the respiratory mucous membrances; fomentations with mullein leaves also have some repute as anodynes. Internally ,the decoction (an ounce to the pint, flowering tips) may be taken in the quantity of from four to six fluidounces."

A number of dealers in crude drugs buy mullein, among them being the Crude Drug Company of 247-249 Pearl St., New York, N. Y. write to this company or others dealing in these things to get prices and directions for collecting and putting up the leaves and flowers.

As regards the preservatives for home made medicine in the absence of alcohol it is rather difficult to suggest a good preservative. There is considerable doubt as to the desirability of using Benzoate of Soda as a preservative. I believe the present pure food regulations permit 1-10 of 1 per cent of this chemical.

If you are manufacturing these medicines for sale, it may be possible for you to obtain alcohol under the restrictions now provided by the National Prohibition law for the manufacture of those medicines in which alcohol is absolutely necessary. You should apply to the authorities at Washington or in Detroit who have the enforcement of that law in their hands, to learn what you must do to obtain such a permit.—*E. A. Bessey, Dept. of Botany, Division of Science and Letters, M. A. C.*

LIABLE FOR DAMAGE; QUITTING

I am working on a farm by the year and have been here 7 months. If I get discontented and resign could I get paid for my garden or sell to some other?—A Reader, Oakland County.

If you have hired out for a year and quit before the expiration of the time fro which you have contracted with lawful excuse you would be liable to your employer for whatever damages you cause him by quitting. The mere fact that you want to quit is not such an excuse as is recognized under law. If your contract provides that you may have a garden spot with a house and you quit work your time is out both for house and garden and you could neither collect pay from your employer nor could you sell to any one and give any more rights than you would yourself have. If you and your employer agree upon the termination of the contract then the terms of that agreement will bind both of you concerning the garden ,the house and any damages resulting from your termination of the contract without lawful reason therefore.—*W. E. Brown, legal editor.*

SON'S WIFE GETS NOTHING

An old man and his wife own farm and personal property. They have only one son who is married and lives with his father and mother and runs his father's farm. The son has no children, no will and the property is all held in the old man's name. Now is case of son's death what could his son's wife hold as her share? Could the old folks will the property all away from her?—A Reader.

If the son dies before the father the daughter-in-law would inherit nothing from the father's estate. The "old folks" can will their property as they please if mentally competent and free from undue influence. They might, if mentally competent and free from undue influence, will it to others than their own son. In such case his only remedy for himself and family would be for a claim for services, which could only be maintained upon express contract as set forth in the above answer.—*W. E. Brown, legal editor.*

COLLECTION BOX

CLAIM ADJUSTED SATISFACTORY

I noticed an article in your Business Farmer where you helped people get their money back from the Bellas Hess Company of New York City. In September, 1919, I sent for a georgette crepe waist which amounted to $6.98. When I received it I found it to be unsatisfactory, so I sent it back asking them to refund my money. It seemed strange to me that they should receive all of my letters and did not receive my parcel which was not insured. I had never insured any parcels sent back to other firms and I always received my money back, and never had any trouble before. I wrote several times concerning the waist and they wrote back several times asking for receipt, and after that I did not hear from them any more.—V. M., Breckenridge, Mich.

This claim was referred by us to the Bellas Hess & Co. Soon after Mrs. V. M. received the following letter:

Your letter to the Business Farmer has been referred to us for attention and since receiving this letter we have gone very carefully over our returns since last September and we are unable to locate ever receiving the waist which you claim to return to us, and we feel safe in saying the package has never reached our house.

If this package was insured we would advise you to immediately have your postmatser file claim for the value of same, as you will be entitled to the amount for which you insured your package.

If it was sent by plain mail we regret that we cannot be responsible for packages returned to us in this way as our catalogue clearly explains this, but we trust that you will not be the loser on this merchandise and that you will be able to take the matter up with your postmaster and file a claim. Bellas Hess & Company, July 20th.

Mrs. V. M. wrote us the following:

I received a reply from Bellas Hess & Co., stating that they were unable to find their mistake and telling me if I had the parcel insured to place the matter in the hands of the postmaster but as I did not have it insured I can do nothing further. Thanking you very much for your interest in the affair.—Mrs. V. M., Breckenridge, Mich.

THE PLATFORM OF THE MAN WHO WAS FORCED TO RUN BECAUSE NO OTHER CANDIDATE WOULD STAND FOR THE SCHOOL AMENDMENT

Every candidate was asked to stand on this question.

Principles and measures are not like monuments—completed and passed on to posterity—they should be put in the hand of their friends for enforcement.

HAMILTON'S PLATFORM

1. Every child in a purely American school for five hours a day, 160 to 180 days a year until they pass the eighth grade.
2. Concrete plans to encourage teaching as a profession must be established.
3. Absolute freedom of speech and press. Publicity like truth, never hurt a good cause nor helped a poor one.
4. State competition with private corporations to whatever extent necessary to bring down H. C. L. and a warehouse in each county.
5. Reforestation—to the extent of several million nut bearing trees.
6. Women to be given every opportunity to assume their full share of civic responsibility.

HAMILTON

Republican Candidate for Governor

Big Bargains are constantly offered

More Views on Hopper Plague

(*Continued from last week*)

Charlevoix County

Charlevoix county farmers fail to agree on the amount of damage in comparison with last year. J. R. D. and D. O. C. of Boyne City and J. K. of East Jordan report damage equal to if not greater than last year. They blame the cut-over lands and urge state control of the pest.

R. J., of East Jordan is a little more optimistic. He says: "The hoppers are quite numerous and have done some damage to meadows and young seeding. They are not bothering corn and potatoes which are looking fine. All crops are looking good and I do not expect any great damage this season."

Manistee County

Both E. S. and C. B. of Manistee county declare the damage is less than reported, but still appreciable, while Carl Knopf, agricultural agent for that county gives us the following interesting facts:

"Both this year and last the hoppers have done considerable damage in Manistee county. In 1919 the Farm Bureau started the poison campaign in April and had used 6 tons of white arsenic by the end of the season. This year the Farm Bureau started the control organization work in October 1919 and in the following month purchased a carload of white arsenic. To date we have used over 33 tons of white arsenic.

"An estimate made by 40 farmers in Manistee county last year said that the Farm Bureau had saved Manistee county over $78,000 by its control campaign. I consider these figures very conservative and believe that they will total not less than a $100,000 saving for 1919.

"This year we have had little damage in sections where the control work was started early and carried out thoroughly and efficiently. However, there are sections who underestimated the Farm Bureau campaign and who did not start control work until the pest had practically gotten out of control. These sections have lost entire fields of beans and corn. In the fruit districts strawberry patches and raspberry patches have been completely ruined despite strenuous, though tardy, efforts of control.

"Comparing the wide awake sections with those which were tardy I would say that an estimate of $500,000 worth of crops saved is very conservative.

"The 33 tons of white arsenic mentioned before have been used all over the county. Each one of our 14 townships have used some of the poison.

"While we have all agreed that publicity concerning the grasshopper menace is not desirable, yet it is also a fact that people who have not observed the ravages of this pest cannot begin to appreciate the damage which they do."

In Conclusion

The only conclusion that can be drawn from the above reports is that the hoppers have not done as much damage this year as in previous years due to the wet and cool weather and the persistent use of poison. That fact is unimportant, however. The important fact is that thousands of farmers of Northern Michigan have lost crops which they could not afford to lose. We are impressed with the further fact that this is a matter which concerns the entire state of Michigan which should take steps at the next session of the legislature to combat the hoppers another year. We are grateful to our readers for supplying us with the above information and we hope that in the future when their crops are being injured by hoppers or other pests that they will advise us at once that we may be of some assistance to them.

Preventative Methods

Hoppers reproduce their kind by depositing eggs beneath the ground in the fall of the year. The ovipositor of the female is long and pointed and is easily thrust into the ground especially where the soil is light. These eggs are deposited in bunches and covered with a secretion which hardens into a sort of pod and protects the eggs. Here the eggs remain for the winter and the warm weather of spring hatches them. The best preventatives are the burning over or deep plowing of breeding grounds so as to turn the eggs out and kill them in the fall or before they can hatch in the spring. The grasshoppers may be captured by means of "hopper-dozers" or the following poisonous mixtures may be used: One part of Paris green mixed in sixty pounds of salt to half a barrel of the parts of fresh horse-dung, two mixture being added, after being dissolved in water. This mixture should be scattered along the edges of crops bordering on meadows, slashings, etc. The ordinary bran arsenic mixture for cut-worms may also be used, and in some regions wheat-fields are protected by a trap-crop of rye sown in a strip around the fields and poisoned by spraying with Paris green.

All will agree, however, that none of these methods will be effective unless all follow them. So the first big job is to compel every land owner to join the hopper brigade. Join hands now for a state-wide war on the next hopper crop.

HILLCREST FARM SELLS TEN HEAD REGISTERED HOLSTEINS

Mr. George E. Mott of Metamora, an enterprising young farmer, has purchased ten head of young Registered Holsteins from John P. Hehl, owner of Hillcrest Farm, Ortonville, Michigan.

Mr. Hehl has a splendid herd of thoroughbreds including several 30-poung cows and headed by a thirty-six pound son of "King of the Pontiacs," for which he paid over $5,000. A son by this herd sire recently sold at Brentwood National Sale, topping the sale at $5,000.

A condition of the sale to Mr. Mott is that each of the animals purchased will be bred to Peldora De Kol, King of the Pontiacs.

HOLDING A SALE THIS SEASON?

Those of the readers of this paper who have decided to hold a pure-bred live stock sale this coming sales season will be interested to learn that Mr. Felix Witt, fieldman for MICHIGAN BUSINESS FARMER is prepared to visit herds throughout the state to write them up and to renden any assistance that a fieldman can in order to make the sale a success.

Mr. Witt will be pleased to visit pure-bred herds of all kinds, whether cattle, swine, sheep or horses and a letter addressed to him care of M. B. F. will be promptly forwarded to him.

TROUBLE WITH IRELAND

(*Continued from page 7*)

free speech that's America. They can go to any church they have a mind to. But America first of all. What's the trouble in Mexico? Not enough public schools and too many private schools. You say they fought side by side in the war if they had the ruling power we would have a rebellion right here in this country. That is the trouble in Ireland, they have the majority. Nothing but public schools will save America where the Catholics have a majority in this country they are closing the public schools. I ask you is that American. I know people that wanted to send their children to the public school and the priest interfered and had them sent to their school. Now this is God's truth. Now is that American. Now if you are for America come out for public schools. I am an American first and last and all the time, I would like to sign my name but I live among them and I dare not do it, is that American? I am no coward either. I am a poor composer but a good thinker. They will turn down a good American citizen for any old bum of their belief. Editor, you are a good American, but you can't join the K. of C.'s unless you are a Catholic. Is there any other society with that restriction?—*Reader.*

Feed Every 3rd Hog FREE

Save feed and get your hogs ready for market in less time. Prove at our risk that you can save fully one third your feed, making it possible to feed every third hog free by feeding

Milkoline At 2c a Gallon

Milkoline has a base of pasteurized and sterilized, modified Buttermilk. It is guaranteed not to contain any sulphuric acid or anything of an injurious nature to hogs or poultry.

Aids Digestion: Thousands of the most successful hog raisers from New York to California during the past seven years have proved that Milkoline helps and assists digestion, tending to insure perfect assimilation of feed. It helps tone up the system so that hogs are less subject to disease, and practically insures gains of 2½ pounds per head per day.

University Tested Professor W. B. Combe while Ass't. Prof. of Dairy Husbandry at Missouri University conducted a scientific test on Milkoline and found that Milkoline fed hogs put on more weight and showed 82.57% more profit than hogs not fed Milkoline. W. H. Graham a successful feeder of Middletown, Mo., said $30 worth of Milkoline made him an extra profit of $420. Lee Jackson of Wappingers Falls, N. Y., says Milkoline fixed up a bunch of shoats in fine style and is great for brood sows.

Can't Spoil: Milkoline is guaranteed not to rot, sour or mould. It will keep indefinitely in any climate. Flies do not come near it. It is always uniform, and is guaranteed to make you money or it doesn't cost you anything.

——*Distributed by*——

2c a Gallon Milkoline comes in condensed form, and you do the diluting on your own farm. When fed as directed Milkoline mixture (one part Milkoline to 50 parts water or swill) costs only 2c a gallon. Full feeding directions free. It is shipped in convenient kegs and barrels which we supply free. The prices are as follows: 5 gal. $7.50; 10 gal. $12.50; 15 gal. $16.60; 32 gal. $32.00; 55 gal. $49.50. It pays to buy in barrel lots because you save 60c a gal. over the 5 gal. quantities.

30 - Day Guaranteed Trial. You are safe in ordering any quantity of Milkoline today. Feed one half the shipment to your hogs and poultry in a thirty day test, then if you aren't entirely satisfied return the unused part to us at our expense and we'll immediately refund every cent you paid us. We are so confident that you will find Milkoline the best money maker on the farm that the S. W. Boulevard Bank of Kansas City substantiates this offer. You are the sole judge. Send money order, or check, to us or our nearest dealer and we will ship immediately. Our booklet, "How to Hustle Heavy Hogs to Market" will be sent free on request—your name on a card will do.

Schwartz Bros., Saginaw, Mich.

(Political Adv.)

Emory Townsend

Candidate

for

Nomination for

Congress

8th Congressional

District

To the Voters of the 8th Congressional District:

Honorable Emory Townsend of Saginaw, a successful farmer, an active member of the Michigan Farm Bureau, a good lawyer and business man, who two years ago came near being nominated for Congress, is a candidate for nomination for Congress at the primaries, August 31, 1920.

Remember that the primaries are more important than the general election. Is it not your imperative duty to go to the primaries, August 31, take a Republican ticket and vote for Emory Townsend? He will make a good Congressman and not be absent ninety per cent of the time as some others have done.

The World War Veterans should be paid a liberal bonus not by the veterans, their relatives or common people as has been proposed but by the "STAY AT HOME PROFITEERS."

CATTLE

HOLSTEIN-FRIESIAN

Purebred Holstein Cows Lead

After a year study of dairy operations on over 20 farms in three different parts of Minnesota, Prof. Cooper of the State Experiment Station finds that dairying is most profitable in the "Holstein Section" of the state.

In 1905 the average profit per cow was only $10.10. In 1909, it had increased to $38.45 per cow, or 43 per cent on capital invested. Increase was due to improved herds, purebred Holsteins having been substituted for grade beef breeds. As soon as dairying is put on a systematic basis, the Holstein cow comes to the front. If facts and figures mean anything to you, send for our illustrated literature.

GRINNELL

IONIA BREEDER TO HOLD BIG POLAND CHINA SALE IN OCTOBER

Mr. Wesley Hile of Ionia, Michigan, a breeder of registered Poland China hogs, will hold a sale October 27th. This will be Mr. Hile's second sale, and he expects it will be a bigger sale than he held before as he has a splendid bunch of registered stock to pick from. Last year his sale averaged $75 per head. He expects they will average higher this year.

Regarding his present stock, Mr. Hile says, "To date I have over 60 pigs on the place and two more litters due now. Will have a 'Clansman' litter again to place in my sale.

"Last year one sow bred to the $50,000 Clansman gave me a litter of 10 pigs to that service and this litter brought me $1,965, all but one being sold at 8 weeks of age and I still have the two best pigs of the litter. Expect a summer litter of same breeding this year. Also purchased a litter mate to the Yankee (recently brought $40,000) that cost me $1,025—one of the greatest sows in the east. She is booked for service to The Clansman and will be shipped out next week. Will produce one of the most valuable litters out this fall.

"My herd has other great individuals representative of the best blood lines obtainable. Am building a herd with an eye to the future. Not a speculation but a business, and a very fascinating one at that."

MANY APPLES ROT

The apple growers in Western Michigan are suffering heavily this season because of the extremely low market price for the fruit. Thousands of bushels are being left to rot on the ground because the growers find it unprofitable to ship to the markets.

Reports from Van Buren county indicate that the growers of the early varieties of apples are the heaviest losers. The growers in Newaygo, Lake and Oceana counties report that they get about 10 cents a bushel profit after the apples are marketed. They say it is not worth the price.

Heretofore cidermakers have gathered up the early crops, but this season they have not wanted them. The crop this season, the growers say, is the best in years. Farmers in the Crapo Valley of Mecosta county report that great damage is being done to the late crops by flies and lice. Aid to fight the pests have been asked from the farm bureaus.

TURKISH H. C. L. MAKES AMERICAN DITTO BLUSH FOR SHAME

In the Ottoman capital food prices have risen 1,515 per cent since August, 1914! Turkey is no longer the place for a poor man. If one wants a pound of sugar he has to pay two thousand six hnudred times more than it cost six years ago, or say the Turkish equivalent for $2.43, for the Levantine equivalent of a pound, the commodity which formerly retailed at perhaps nine cents. A twenty cent pound of cheese would bring about $4.77.

It makes an American housewife offer up a prayer of thanksgiving to think that she does not have to pay more than one or two hundred per cent more for her supplies. The Turkish housekeeper has to count on paying out over fifteen times as much for her household needs. Nor are these figures mere idle speculation. Thy represent the best figuring of the Ottoman Administration of the Public Debt for the period from August, 1914 to May, 1920, and are published as the Mohammedan equivalent of "Gospel" truth.

In view of these prices, Russian refugees are quite unable to provide themselves with the barest necessities of life when they find themselves in Constantinople and possessing only the few treasures which they could carry with them in their flight before the armies of the Bolsheviks. As a result the American Red Cross colony for refugees at Protoi, near Constantinople, is very active. The quarters are continually filled with starving men, women and children, who are provided with American food and American care and housing until they are able to continue their journeys or to find occupation. Nobles as well as peasants are succored at Proti, for many members of the form er Russian aristocracy whose property has been confiscated by the Soviet government, find themselves, as unequal to buying a loaf of bread as the poorest peasant.

CHERRY CROP IS BELOW THE STANDARD

Completion of the work of marketing the cherry crop by the Michigan Potato Growers' exchange shows that the crop was not so large as had been anticipated, and that many of the cherries were in poor condition because of unfavorable weather conditions during the picking season, said G. E. Prater of the exchange. The excessive moisture during the picking season resulted in heavy spoilage, Prater declared.

FARM BUREAU PLANS EDUCATIONAL CAMPAIGN

Latest developments in the Michigan State Farm Bureau's wool program are the launching of a statewide educational campaign and the leasing of a fourth warehouse.

This warehouse is located in Grand Rapids and will hold approximately 1,000,000 pounds. This new space will bring the total amount of wool that the pool can accommodate to approximately 4,500,000 pounds.

By study of his business the average farmer can increase his income from his wool, the Farm Bureau maintains. To stimulate such a study and also give the wool grower a graphic understanding of methods of wool grading the Farm Bureau is sending out to each Michigan county a plaque of sample of the several grades of wool. With each display is a careful description of the types of wool, a list of the kinds of wool produced from each breed of sheep and instructions designed to produce the most profitable wool crop. One of the most important phases in the betterment of Michigan wool production, according to the farm bureau, is for each grower to select one breed of sheep and stick to it, gaining thereby a more uniform grade of wool and a greater profit.

These wool displays go first to the county fairs and then will be placed in the farm bureau offices.

ESSEX MOTORS DETROIT U.S.A.

See How Essex Proved Economy

A Nation-Wide Demonstration
No Motorist Can Overlook

Connecticut—With 12 cars over Mohawk Trail and Hoosick Mountains and 12 over a coast route—many owner driven—216 miles average distance per car, 18.7 miles per gallon were shown. One car with 35,000 miles service averaged 21.2 miles per gallon.

Nebraska—A Hastings, Neb., woman drove her Essex from Lincoln to Hastings, 109 miles, averaging 28 miles per gallon.

California—Four women drove from Los Angeles to San Francisco and return averaging 22.3 miles per gallon. A San Francisco Essex made the round trip, 846 miles, in 33 hours with 23 miles per gallon. Hood and radiator sealed.

San Antonio, Tex.—In a 166 mile run to Austin and return Essex averaged 25.5 miles per gallon.

Sacramento, Calif.—Defeated 19 entries and took Tallac Cup for highest gasoline, oil and water mileage in Sacramento Dealers reliability run.

Baltimore, Md.—Essex sedan, on original tires with 15,000 miles service, traveled 221 miles over Maryland hills, averaging 23 miles per gallon.

Florida—On a measured gallon an Essex covered 23 miles and without change or adjustment of any kind showed speed of 68 miles per hour.

49 Cars Average 18.9 Miles Per Gallon—Records cover every kind of test at a speed of from 5 to 72 miles per hour.

Los Angeles, Calif.—To San Francisco over 828 mile route of steep grades and frequently far from water supplies Essex which had previously gone 28,000 miles and under U. S. Marine observation made trip sealed in high gear with sealed hood and sealed radiator. Average 22.8 miles per gal. gasoline.

Also Broke World's Dirt Track Record—1261 Miles

Made at Dallas, Texas, by a Car That Had Already Gone 12,000 Miles

From the mere standpoint of gasoline mileage, Essex in its nation-wide tests showed a performance worthy of cars which possess that advantage as their principal quality.

Records were kept on 49 cars. They averaged 18.9 miles to the gallon.

But bear in mind this was not done by taking advantaeo of every device possible to increase gasoline mileage. Under conditions of that sort, Essex showed as high as 37 miles to the gallon. However, men don't drive that way. How obviously unfair it would be, therefore, to offer such carefully economized fuel mileage tests as typical of all Essex cars.

In the Essex tests, conditions and performances adverse to gasoline economy obtained.

These cars were being driven at speeds from 5 to 72 miles per hour. They were reeling off thousands of miles over all sorts of roads in inter-city runs that set new time marks. They were making new hill-climb, acceleration and endurance records.

Many were owner cars—owner driven. Women piloted some.

Some of the Essex cars used had already traveled upwards of 30,000 to 35,000 miles.

So you must not view Essex economy merely by its gasoline consumption. You must also consider its endurance and reliability.

If there were nothing more striking about the Essex than its gasoline mileage, it would be a worthy subject of our advertising. But important and impressive as that fact is, does not its other qualities take first rank in your consideration?

An Appeal to all Friends of Sugar Beet Industry

Manager C. E. Ackerman Re-States Aims of Growers' Organizations and Asks for Support in New Campaign

THE RECENT drop in sugar has given an entirely new angle to the price controversy between growers and manufacturers. It is well known that the bulk of the 1920 acreage was secured on the false promise of the manufacturers that the sliding scale contract would net the grower $16 or more per ton. The present condition of the sugar market does not indicate that any such price will be paid the producer. Sugar has dropped seven to ten cents per pound, wholesale and retail, during the last sixty days and there are some who predict that by the first of the year we will again see 11 cent sugar to the consumer. In that event the wholesale price certainly could not exceed 9 cents per pound, upon which basis the minimum of $10 per ton for the beets is figured. It would not be at all surprising if the farmers did not receive a penny more than the guaranteed minimum of $10 for their 1920 crop. Yet, according to official figures the manufacturers could afford to pay a minimum of $12 per ton on 9 cent sugar. This was the minimum price which the organized growers tried to get this year, but failed because some of their members deserted the ranks.

However, that is now history. The price that will be received for the 1920 beets will be much less than anticipated when the beets were planted. The manufacturers will receive as they always have, the lion's share of the profits. It is presumed that they will try to foist the same old contract onto the growers another season in order that they may continue to get a lion's share of the profits. It will remain with the growers as it always has in the past and always will whether or not this condition is to be permitted to continue. Manager Ackerman and thousands of growers are as strongly convinced as ever that their claims for recognition and larger share of the profits are just and that the fight should be renewed with greater vigor and courage. Mr. Ackerman has asked us to publish his appeal to all who are interested in this great industry, which we gladly do below:

"To all Sugar beet growers of the State of Michigan; Farm organizations of Michigan; Officers of the Mich. Sugar Beet Growers' Association; Officers of the 113 local Beet Growers' Association; Field Men, Acting Agents of the 17 Mich. Sugar Factories; Sugar factory managers and stockholders of factories; bankers and all others having any interest in the sugar beet industry of the State of Michigan, whatsoever:

"Gentlemen: The Michigan Sugar Beet Growers' Association, an organization of about eight thousand of the large growers of beets in Michigan, having 113 local organizations throughout the beet growing parts of Michigan are now about to begin their campaign for more organizations. New members to all the existing organizations, and to all new organizations, in an endeavor to get a conference with the seventeen sugar factories or any part thereof, a little better beet contract for 1921 in which the grower and the factory will receive as near as may be a fair proportion of the net proceeds from the sugar in the beets based on the money at risk, through labor involved in the business, the sugar content of the beets and a sliding price scale regulated by the average price of sugar.

"In starting this campaign at this early date we are acting in accordance with the suggestion of the many that felt that we started too late last year on account of the factories having already entered the field and secured many thousands of contracts who say if this campaign is started early they will all stand with us.

"We feel that inasmuch as we have a working organization of around eight thousand members organized into one hundred and thirteen locals all complete in themselves in their respective localities, having their own officers and their own funds we are in good shape to carry our cause and interests to the thousands of new growers in the new and old sections which the factories secured to grow beets this year, and ask them to join with us and expand our organization until this organization enlists practically all the beet growers of the State of Michigan.

"In starting this campaign we do so feeling that inasmuch as all the factories are in an association and do stick together and put out and all operate under one contract we as growers and producers should likewise organize and insist on a contract that will give recompensation for capital, labor and depreciation involved in the business to all concerned.

"On account of the large territory over which the growers are scattered and the large number of growers we realize that there must be some medium through which the different matters will come up from time to time can be transmitted from the State Association to all the growers and others interested in the industry. THE MICHIGAN BUSINESS FARMER of Mt. Clemens, Mich., having stood loyally by the growers last year and offering to lead in a campaign of publicity for the interests of the beet growers we think it advisable that every member of our association, every non-member that is interested in the growing of sugar beets should subscribe for this paper and be able to get the news on just what is going on each week during this campaign.

"We wish to state before starting this campaign that this Association recognizes the right of any factory to act individually and make contracts for the growing of beets at any price that may be agreed upon and that any farmer has the right to not join this Association and that he may withdraw at any time and grow beets at any price that he may decide to do so for.

"We believe that the benefits that will be derived by the co-operation of organization will be many fold to not only the farmers but to the factories as well and to all lines of industry that may be affected indirectly by the successful expansion of this industry.

"We wish to ask the support of all farm organizations all business men's organizations, boards of trade, and commerce in this campaign as it must be recognized that something done to assist in the return of the 100,000 young men that have gone from the farms to the cities in the last ten years must be for the good and the upbuilding of all industry for the state of Michigan.

"This Ass'n asks the return of any members that may have withdrawn and are growing beets this year to their respective locals or any other locals and we ask the membership of all the new growers believing that we as beet growers can have only one and a mutual interest which can only be secured by successful organization. Yours very truly, C. E. ACKERMAN,
Mich. Sugar Beets Growers' Ass'n.

The Sugar Trust Lullaby

**Sleep little Sugar Trust, strong statutes guard o'er thee.
Soft bonds stuff the pillow beneath thy small head.
The ablest of statesmen are laboring for thee,
The tariff protects from disaster thy bed.**

**Sleep, little Sugar Trust, and rest for this season.
The farmers did think they could wake thee in time.
They tried very hard for a share of your profits,
But some of them failed to keep in the line.**

**Sleep, little Sugar Trust, thy parents are watching,
They are guarding thee close, as never before.
They know if the farmers would all keep together,
That some of thy dollars would flow from thy door.**

**Sleep, little Sugar Trust, the farmers are with thee,
They failed in their efforts to bring you to time.
They are doing their best to raise beets for your factories,
Well knowing that most of the profits are thine.**

**Sleep, little Sugar Trust, with statute and tariff
And statesmen and laborer working for thee.
All thou need'st to do is to hoodwink the public,
To grow to be King of this land of the free.**

—Composed by Mrs. B. B. Reavy, Akron, Tuscola County.

A Swiss Agriculturist's View of the International Milk Situation

(As gleaned from a circular letter received by Mr. M. L. Noon, president Jackson County Milk Producers' Association, from the Director of the Swiss Agricultural Ass'n.)

ON THE international milk market an extraordinary pressure is expected by buyers at present. Every indication points to the fact that during the next summer milk prices are in prospect which do not answer to the costs of production at all. Everywhere wages and salaries have soared to a very high level and are still rising; in contrast to this, it is intended to reduce the income of the milk producers to such a degree that the most industrious and most useful supporter of economic life would be paid worst.

The Swiss farmers are firmly determined to oppose themselves by every means to such a development and require for the assistance of the authorities. In the interests of the consumers farmers were not allowed to take the full profit of the market situation existing during the war; for this reason they are now entitled to look for protection against a sudden reverse.

But those efforts cannot be successful unless in all producing districts the farmers resist energetically the tendency of bringing about a considerable decline of price. It will, of course, not be possible to avoid a certain drop of prices in places where those had been exceptionally high during the war. But reports which have come to hand from various countries, f. i., from Holland and some parts of France, show clearly that farmers there are too much inclined to yield to the pressure exerted by the trade. During next summer the Swiss farmers require a price of 35 centimes (Swiss standard) for a kilo of milk, taken at the stall. This price involves a decline of 2-3 centimes or of 8 per cent as compared with the quotations during the winter 1919-20.

Everywhere the agricultural associations ought in particular to try to maintain a price of consumptive milk that will be in accordance with the cost of production. Thus it will be easier to secure a corresponding price of dairy produce and of the milk employed for it. In Switzerland both farmers and traders founded a large society with a view to take over the whole cheese supply of the country at a price corresponding to those of consumptive milk. In this way an uniform fixation of prices is ascertained for all the producers.

We hereby beg the agricultural associations to inform farmers everywhere of the present situation and to invite them to oppose themselves to the pressure on the international market. For this purpose it will be very useful to curtail the production of milk as much as possible and to increase corn growing, on the other hand. As long as the political situation does not improve in Russia, this country will not be able to contribute largely to the provision of Europe and, therefore, the demand for corn will remain brisk. In spite of the depreciation of foreign exchange the nations that are threatened by famine will buy cereals in the first place and their demands will tend to maintain prices. Besides it will be of utmost importance that the governments will grant credits to those states for the purpose of cheese and butter and thus they will lessen the pressure felt at present on the markets for milk and dairy produce. By means of such credits a gradual improvement in the position of the market might be brought about. In addition to it, the consumption of fresh milk and dairy produce is to be stimulated to the utmost.

We request you earnestly to do in your country all that is in your power in order to prevent the crisis threatening agriculture. We beg you to inform the agricultural associations and milk producers of the contents of this circular in the most suitable and efficient way for the object in view.

We remain, gentlemen,
Yours very respectfully,
Ernest Laur, Director of the Swiss Agricultural Association.
J. Ralch. For the Price Inquiry Office of the Swiss Peasants' Ass'n.

A City Newspaper's View of the Farm Bureau

Metropolis Paper Discusses Beginning, Work and Aims of Michigan State Farm Bureau

By PETER FAGAN
Lansing Correspondent Detroit News

THE MICHIGAN State Farm Bureau is the central overhead organization which binds together in a working unit the 60-odd county farm bureaus throughout the state. The county farm bureaus have been in existence and operating with varying successes for about eight years —ever since the enactment of the Smith-Lever Bill in Congress, which appropriated a federal fund for distribution in the states on a pro-rata basis, the money to be used in helping to pay the salaries of county agricultural agents. The counties through their boards of supervisors paid half the salaries.

This was the method of financing the work of "agricultural extension" —that is, educative effort reaching out to the farms—in all the agricultural states of the country until the general movement of business and industrial reorganization incidental to post-war conditions set in. Then a reorganization and amplification of the farmers' county bureaus began to make itself manifest. The big business idea, long germinating in the minds of the rank and file of the agriculturists as the result of years of earnest educative effort on the part of leaders in all parts of the country began to work itself out in practice.

West Showed the Way

The county agent who, up to this time—between two and three years ago—had been merely an exponent of science and practice in the growing of crops became a business agent. The farmers began to demand and get information and assance in the marketing of crops. re was nothing new in the gen- l idea—the fruit growers of the West had shown the way years before, and out in North Dakota the farmers had more recently demonstrated how legislation wrought through political action could be obtained to make the idea practicable and successful.

Michigan did not get into the general reorganization movement until recently. The reconstruction wave swept up to the state's borders before agricultural leaders in this state made a definite move. It was not till Ohio had reorganized the county bureaus, making the county agent a business as well as an agricultural agent ,and had topped the state-wide county organization with a state bureau, that the Michigan men took hold. And then they took hold with something of a reactionary hand.

Radical or Conservative

The North Dakota movement, the Non-Partisan League movement, with all that it involved in political action reaching into the state legislature, the executive office, and even into the supreme court, action aimin gto bend the whole politico-economic policy of the state to the program of organized big business in agriculture, was beginning to raise ardent advocates in Michigan; and the story went round and was widely believed by Michigan farmers that some of the Non-Partisan League's big campaign fund has been designated for use in this state.

An issue thus arose within the ranks of Michigan farmers. It was the question whether in carrying forward a reorganization, it should be carried forward along the lines laid down by the Non-Partisan League with its outstanding program of state ownership of elevators, mills, banks, legislatures and courts, or whether the reorganization program should stop short of this aiming only to unify the farmers for the transaction of the agricultural business—the sale of crops and the buying of supplies. A radical and conservative element in Michigan agriculture always existent, became more clearly defined. As a matter of fact, it is becoming more clearly defined every day.

Conservatives in Saddle

When the Michigan reorganization movement set in, however, the conservatives got away first. This would seem to indicate that the conservative element is really in control in Michigan. It not only seems to be the fact, but it is the fact, as the history of this movement, along with many other things, amply proves.

What conservative Michigan farmers regarded as too radical plan and action out West has scared other people besides the conservative farming element in this state. An organization of business men had come into being for the express purpose of combatting, by adverse propaganda, the Non-Partisan idea. This was the so-called Michigan Coalition Committee. Its personnel, objects and methods may be accurately known to some people but not to a great many out in the rural districts. On the farms it is not generally known, even in name, Henry B. Leland of Detroit, and Mark T. McKee, of Detroit and elsewhere are two men of this organization whom some of the farmers know about. Mr. Leland is spoken of as the head of the Coalition Committee and McKee as its agent. They also know, generally that Mr. McKee no longer is connected with the Coalition Committee.

Various leaders among the agriculturists knew about the Coalition Committee, and had heard that it had a fund for carrying on its propaganda. Rollin Marrill of Benton Harbor, was one who knew about it; C. B. Cook, of Owosso, was another. Cook is county agent in Oakland and an active organizer among the farmers.

Coalition's Support Sought

"When the impulse among the farmers of Michigan to organize on a business basis became definite and the time came for action, a year ago last February," said Mr. Cook recently, "I sought out Mr. McKee and told him it was understood that his organization had a fund, and represented to him the fact that the primary object of his organization and that of the proposed state farm bureau was substantially the same. The Coalition Committee was opposed to the political doctrines of the Non-Partisan League. We, while we admired many things about the league, did not approve of its more radical acts."

The radical acts were specified by Mr. Cook to be direct political practice.

"We needed funds to finance the state farm bureau, until such time as membership fees should begin to come in," continued Mr. Cook. I proposed to Mr. McKee that he make us a loan, on our note. He thought well of the idea, and at a meeting in Detroit in September, 1919, representatives of the Coalition Committee and the agriculturists took up the question. (*Continued on page* 17)

Growing Alfalfa on Michigan's Light Loam and Sandy Loam Soils

By J. F. COX
Professor of Farm Crops, Michigan Agricultural College

ONE WHO travels extensively over Michigan's light loam areas and light sandy loam country will be struck forcibly by two alfalfa thoughts. First, that alfalfa has proven a wonderful success on these lands where rightly handled, and second, that Michigan's light lands need a great deal more alfalfa. Without doubt the same observations can be made in regard to Michigan's loam soils or clay loam soils, but the need of alfalfa on these lands is not so strikingly apparent, owing to the better success of clover and other forage crops. It is the lighter type of lands which are usually most deficient in organic matter and which give the greatest response to the growing of leguminous crops. The lighter lands of Michigan are as a class better drained than the heavier types. The rolling sandy loam country of southwestern and west Michigan and the gravelly and sandy knolls and ridges found throughout the state can usually be profitably planted on alfalfa. The jack pine plains and light and very light hardwood sands are not, however, in the same class. On such inferior soils it has not been demonstrated that alfalfa can be profitably grown, because of the great cost of lime and fertilizer needed to prepare for alfalfa.

In growing alfalfa on light sandy loam, the following methods usually result in good stands.

1. Apply ground limestone, marl, beet factory lime or hydrated lime;
2. Prepare a well worked, firmly packed seed bed;
3. Plant hardy northern grown strains;
4. Plant during season of ample rain, spring preferred.
5. Inoculate seed or soil.
6. On soil very deficient in organic matter, apply manure or precede alfalfa with sweet clover or other green manuring crop.

The points above enumerated are the ones the writer has heard frequently mentioned by a great number of farmers who have succeeded in growing alfalfa on light lands. For instance, Mr. Will Nelson of Lawton, "the father of alfalfa in southwestern Michigan," as he is called, attributes his success in securing alfalfa on land so light that it will blow, to the use of an ample supply of marl, to the spreading on the land of grape pulp from a nearby grape juice plant to supply organic matter and to the planting of the right kind of seed. Manure where available would be more effective than the grape pulp.

Mr. Jason Woodman, has met with marked success in alfalfa growing on his farm near Paw Paw, and has started numerous farmers in Kalamazoo county, while serving as county agent there, along the same road. In talking alfalfa, Mr. Woodman is enthusiastic not only regarding the direct benefits of a good crop of alfalfa, but realizes that this crop is the foundation for better crops of corn, potatoes, beans and following grain crops. He states that it is necessary to "stick to the rules of the game," apply calcium carbonate (ground limestone or marl), prepare a clean firm seed bed, and plant hardy northern grown seed which has been inoculated.

Prepare a Firm Seed Bed

The need of preparing a firm seed bed is one that is not usually understood. Altogether too many who attempt to grow alfalfa will work up a mellow seed bed, such as is good for corn or beans, or potatoes, and not at all suited for making the right conditions for alfalfa.

Light soils should be plowed to a medium depth in the early spring, or if approaching loam in nature, in the fall. In fitting for alfalfa, this land should be disked and firmly rolled with a roller or culti-packed, going over the field several times if necessary to firmly pack the soil. Have you noticed, on light land, that alfalfa will sometimes come in where the wheels of the drill have passed or where a wagon has passed over the field, while the remainder of the field will be bare where the land has not been compacted?

The following instance is typical of the benefit of compacting the seed bed. Mr. Fred Thomas recently planted 20 acres of alfalfa on light loam land in Ingham county. The seed bed had been worked into excellent tilth by use of disk and the smoothing harrow drawn by a tractor. An ample quantity of marl had been used, the seed was inoculated and northern grown and apparently all was set for a good crop. When the writer visited the place in early June, the seeding was being made. The suggestion was made to Mr. Thomas that it would be a good practice to firmly compact the seed bed with a roller or culti-packer, so that the case of rain holding off, the seed would get a good start. It so happened that about one-third of the field was rolled when what would be termed a heavy packing rain stopped further use of the culti-packer. In spite of this fact, the part of the field which was compacted is noticeably better than the remainder of the field. The roller or culti-packer should be on every light land farm.

Culture for inoculation can be secured from the Department of Bacteriology, Michigan Agricultural College, East Lansing, Michigan, at 25c per bottle, one bottle being sufficient to treat one bushel of seed. Lime is usually used at the rate of two tons of ground limestone per acre or several cubic yards of marl per acre. Marl is available in many ways throughout Michigan and is an excellent form of calcium carbonate. During the fall, marl can usually be most conveniently taken out.

Spring Planting Surest

On light lands, spring seedings usually make a good start before the drouth of midsummer. July or early August seedings are more likely to meet with drouthy conditions but when established are usually freer of grass and weeds. If well rooted the young alfalfa plants will stand rather severe drouths. The best results come from planting without companion crops except on lands which are likely to blow in which case, it is advisable to use one or two pecks of barley or buckwheat or some other grain as a companion crop.

The usual rate of planting alfalfa is 12 to 15 pounds per acre. Northern grown alfalfa seed is best. The Grimm, Baltic or Cossack strains are apparently superior, though common northern grown alfalfa from the Dakotas or the northwestern states is dependable. The war taught us a great lesson. During the years when the supply of imported seed from Turkestan was cut off, Michigan growers were forced to pay high prices for seed but native grown seed was supplied for the most part. As compared to former years much greater success was met with.

Get Northwestern Grown Seed

The Farm Bureau Seed Department is making a special effort to bring into Michigan supplies of northern grown seed. Mr. J. W. Nicolson, its manager, has made a recent trip through the northwest inspecting alfalfa seed fields. He reports that conditions are right for the purchase of a large supply for Michigan farmers. Alfalfa growers who intend to plant next spring or early summer, should place their orders through their Farm Bureau Seed Departments now for good northern grown seed. Several Michigan seed companies also handle seed of fine quality from the northwest.

More Alfalfa Needed

An alfalfa farm in the light soil region usually stands out like an oasis. Successful fields of alfalfa are the foundation for better crops of potatoes and grain(better herds of livestock, better homes for the individual farmer and his family. For the community, the presence of numerous farmers who are good alfalfa growers usually mean better schools, better churches, better roads, and a better place in which to enjoy our constitutional rights of "life, liberty and the pursuit of happiness." Michigan needs more alfalfa!

Copyright 1920, by The Goodyear Tire & Rubber Co.

"The use of a truck on Goodyear Cord Tires has increased my land value by bringing my farm closer to town. Power machines, assisted by this pneumatic-tired truck, offset my labor shortage. The Goodyear Cords on my truck have traveled about 10,000 miles to date. Solids can't go into the soft fields; pneumatics go through easily—haul 450 crates to 40 by team. Hard to sell a second-hand truck on solids here."—Glenmore Green, Farmer, Fort Valley, Georgia

EXTENSIVE rural experience, like that related above, has confirmed the tendency of farm land prices to increase when Goodyear Cord Tires are used to cover long or difficult hauling routes.

Fertile acreages, ten or twenty-five miles from the nearest town, have become more profitable and hence more saleable due to improved transportation on these able and rugged pneumatics.

What formerly was a tedious and jarring haul by either team or motor truck, has become a brisk, smooth trip due to the grip, cushioning and spryness of the big Goodyear Cord Tires.

These virtues frequently enable short cuts to market, bring more markets within easy-hauling range and pave the way for the safe, punctual transit of perishables and shrinkables.

The huge strength of Goodyear Cord construction, developed with the manufacturing care that protects our good name, makes possible the utmost utility and economy of this type of pneumatic tire.

Detailed information, concerning the manifold advantages of pneumatic-tired trucks and general farm motorization, will be sent on request by The Goodyear Tire & Rubber Company, Akron, Ohio, or Los Angeles, California.

Some Facts About Rural Telephone Rates and Service in Michigan

Michigan Public Utilities Commission Explains Modern Policy With Relation to Telephone Companies

(*Continued from August 21st issue*)

THE BUSINESS FARMER has received a number of complaints the past year from rural telephone subscribers claiming that the service is inadequate and the rates unreasonably high. These have been referred to the Public Utilities Commission at Lansing, which was created by the last session of the legislature, with the request that the complaints be investigated. Invariably the Public Utilities Commission has come back with the assertion that the service being rendered by telephone companies is all that could be expected considering the financial losses to which the companies have been subjected owing to inadequate rates. We are not prepared to say at this time whether the commission is right or wrong in these conclusions. It is presumed that the Commission has made a thorough investigation of telephone costs, receipts, earnings and losses and is in a position to know whereof it speaks. It is true as everyone knows that the cost of telephone construction and operation has increased largely the past several years and that rates have probably not advanced in proportion to the increased costs. The subscriber to a telephone service is primarily concerned with securing good service for which he is willing to pay a reasonable rate that will insure the company a reasonable profit. But when rates are increased as they have been of late years without a proportionate betterment of service it is small wonder that subscribers become disgruntled and feel that they are being imposed upon.

It is the belief of this publication t there is danger of the Public lities Commission exhausting all compassion on the telephone companies and have none left for the subscribers. It is also our belief that in cases of specific complaints of poor service the commission should cause an investigation to be made and ascertain the reason therefore. No one desires to compel telephone companies nor any other public utility corporation to operate its properties at a loss and we feel that the public is willing to meet the companies half way in the solution of these problems which are after all mutual.

Below are two letters that are typical of the complaints that have been received. These were referred to the Utilities Commission, whose reply sets forth the policies of the Commission, and is also published below:

Poor Service in Alcona County

"The farmers have great faith in the judgment of the M. B. F., as I writing to ask your advice on our trouble. Our telephone company has raised our rate to $18.50 per year. Our party line has 13 phones, hence poor service. The other lines nearly all the same. Have they a right to do this and how does this rate compare with others in this state? We want the telephone but believe the farmers are being imposed on. Even the telephone girls at the central office are instructed to answer the town calls first. Your answer will be greatly appreciated."—*J. M., Harrisville, Mich.*

Kent County Telephone Service

"Could you please tell me through your paper what we can do about our telephone. We pay $18 a year and in advance each month. There are one day to six we do not get any service, the line will get out of commission and they fix it when they see fit and we have to pay our money just the same as if we get good service. It is the Citizens' Telephone Co. Can the subscribers get a petition and sent it to Lansing to the State Railroad Commission? Talk about profiteering, what would you call that?"—*A Subscriber, Kent County, Mich.*

"It is my idea that service and rates are by the statute, made correlative and interdependent. It provides that "all charges shall be reasonable and just," and that all telephone companies shall "furnish reasonably adequate service and facilities." No one is entitled to receive that for which he does not pay. A telephone subscriber who pays a cheap rate, must expect inferior or curtailed service. Reasonable and just rates entitle the party to reasonably adequate telephone service. The subscribers to a telephone company's service ought not to be compelled to pay for something they do not get,—for a kind of service which is not given.

"From an operating standpoint, ordinarily thirteen telephones on a party line is too many. In many however the community preferred to have more people on a line than to have a separate line for the reason that they can talk with one another in that way regardless of central station operators.

"When it comes to the question of giving adequate service, it is pretty difficult to say to a half starved horse that if he will do a good day's work that ultimately he may be fed, and it is pretty difficult to compel a telephone company to render high class service without sufficient money to do so. Rate increases are based upon the rendition of reasonably adequate service, and if, after a fair opportunity that kind of service is not rendered, both the statutes and the orders of the commission reserves the right to reduce the rates in accordance with the character of the service rendered.

"From an engineering and operating standpoint, rural telephones throughout the state of Michigan pay about one half of the cost of construction and operation. The traffic will not bear increase, and the balance of the cost is placed upon the telephones in the villages and cities upon the somewhat hazy basis that the city subscriber derives some theoretical benefit from being able to reach the rural subscribers.

"The rate should bear reasonable relation to the service rendered. There are many co-operative mutual telephone companies throughout the state who furnish comparatively cheap service. They do business at low rates. Sometimes they are in condition to operate and in others not. Many of them have been abandoned. Most of them now that their poles have rotted off and they find themselves without any depreciation reserve are compelled either to sell out or to ask exorbitant rates to habilitate their property. $18.50 for rural telephone service, providing you get good service is not an exorbitant price. There are some places in the state where even higher rates are charged for comparatively poor service.

'The reason the service is comparatively poor is because the communities are sparsely settled. The cost and expense of construction and operation is high, and in all these cases of course the party has the option to take the service or go without it."—*W. W. Potter, Commissioner, Michigan Public Utilities Commission.*

Keep the Boys on the Farm by Making Farm Life Attractive

By H. G. WEAVER

YES, the story may be true, but what of it? Is it a representative case? Is such an incident the rule or is it not the exception?

How many farmer boys go to the city and earn seventy-five dollars a week within the first twelve months or even the first twelve years for that matter? You can see it in picture shows—you can read about it in the story books, the magazines, and the Sunday Supplements, but—

How often does it actually happen in real life?

If this particular boy of Polish parentage did make that much money, how consistently is he making it? How long will he continue to make it?

Mind you, I don't even know the chap or what kind of a job he has, but I'll bet you thirteen to one that he's putting in longer hours and doing harder work than ever fell his lot back on the farm!

Let me ask you this—

For every one of these birds who mushroom their way into Big Money, how many are there who are warming the benches out in the park—or shoveling coal in a smoky railroad yard—or writing home for money—or joining the Navy through sheer desperation—or washing windows or repairing street-car tracks, or handling freight at the rate of twenty-nine cents an hour—twenty-nine cents an hour when not striking!!

And, again—I don't think much of the Paternal Pole even if he did get his name before the proverbial three million readers. He has fallen in line with the masses. He is helping to press-agent the city—helping to press-agent the city even though it is opposed to his own personal interests. Read the last part of his letter over again—

"We, altogether—the whole family—can't make seventy-five dollars a month here on the farm."

Now listen—if a farmer who has been farming all his life can't make seventy-five dollars a month with his whole family helping him he should be the last one in the world to admit it.

No sire! I am not an advertising man, or a psychologist or even a propagandist, but I wish I could have had a hand in answering that boy's letter.

I would have asked to see the liability side of his personal ledger—I would have asked him how much room rent he paid—I would have asked what his food was costing—I would have made inquiries concerning his laundry and car fare and how much fresh air was allowed him for breathing purposes—I wouldn't have painted an attractive picture of farm life of today but the farm life of tomorrow. I would have predicted a new era in agriculture—I would have pointed out that the pioneering, the hardest part of the work, had already been done—I would have discussed farming, not as a drudgery, but as a coming business holding forth a field for big achievement and I would have asked him if he didn't want to step in and "carry on" when his old father was gone.

When the Farm is Made Attractive

I think I am broad-minded—I think I'm fair about this thing. I am stating the facts as I see them.

I grant that from a broad economic viewpoint the lack of help on the farm is a serious matter.

But remember this:—

It's going to get even more serious if we keep on advertising the deplorable plight of the downtrodden farmer in direct contrast with the charms of metropolitan life!

If we don't get more labor on the farms, starvation stares the world in the face.

But people—ordinary people—people who work for a salary or for wages—average folks like you and I, are much more interested in their daily welfare and immediate personal benefits than in any abstruse problem of World Economics!

Maybe this is an improper attitude, but the fact remains. The average man is more interested in himself than in the welfare of the human race. And while he is quite willing for the other fellow to make a sacrifice, he himself is reluctant to take up a career that holds forth nothing but gloom, hard labor and low wages—even though such a course may insure food for all posterity!

The farmer is running a want-ad for labor—or perhaps someone else is running it for him. You won't find it in the want-ad section, but you'll find it everywhere else—it's running in preferred positions—in editorial columns—on the front pages of the newspapers—in magazines—even in government literature and college text books!

It reads like this:—

FARM HANDS WANTED

"Hard work. Long hours. Low wages. Very little future. Employment unsteady and irregular. Poor

COMFORT A. TYLER, Manager

The Peninsular Casualty Insurance Company

Is the new name given to the Michigan Live Stock Insurance Company. The new name makes it a more fitting running mate for the *Peninsular Fire Insurance Company.* Michigan's Two Peninsulars practically under one management can write any line of insurance except life that the farmer may desire.

The Peninsular Fire Writes:

Fire, Hail, Tornado, Automobile, Tractors, etc.

Farm buildings and the farmers' household goods are invariably underinsured.

The Peninsular Fire rates farm property according to location of buildings and fire preventative construction—no other company does.

Combined *fire and tornado* policies will save you money.

Immense amounts of money are lost every year by hail storms. Save this with a policy in the Peninsular.

The farm Tractors as well as the Automobiles should be covered by a Peninsular Policy.

The Peninsular Casualty Writes:

Health and Accident, Employees' Liability, Fidelity, Bonding, Live Stock, etc.

Special five year Farmers' policies insures the farmer against loss of time resulting from sickness or accident.

Employers' Liability Insurance
(Workmen's Compensation)

protects the farmer from liability caused by accident or death of his hired help.

Many farm organizations require their officers to be bonded, also County and Township officials, etc. The Peninsular Casualty writes all kinds of *fidelity bonds.* Give us your business.

Insure your farm animals—horses, cattle, sheep and swine against death from accident or disease.

MARKET FLASHES

TRADE AND MARKET REVIEW

The money situation is in a very satisfactory condition as far as loans for the movement of crops are concerned. Credit for manufacturers, jobbers or dealers is hard to secure but farmers that need money to harvest or market their produce can get credit quite easily, and it is believed money will be free for this purpose with no danger of a tightening up; in fact a well known New York financier is quoted as saying that we are past the point where there is any danger of a money crisis.

Manufacturers and jobbers are having a tough row to hoe. At the forepart of this year business was booming. The public was buying any and everything at any old price and the manufacturers and jobbers had a waiting list of dealers at their doors. When manufacturers ordered raw material they ordered twice as much as they really needed because they did not want their factories to lie idle a moment and jobbers purchased more than enough to fill orders, but all of a sudden the public decided they were paying too much for things and they commenced to buy less so the retail merchant, who was pinched for credit already, cancelled orders. The result was that the retailers had to put on bargain sales in order to sell the goods they had on hand to meet their notes. The public took the bargains and then began buying as little as possible again. Manufacturers and jobbers then began to lower prices to the retailer who, in turn lowered prices to the public and at the same time tried to get the public to buying by claiming that prices were going to advance again shortly and go higher than ever, but the public could not see it that way so prices have kept coming down and they haven't reached the bottom yet. In Chicago, according to the findings of a recent investigation, suits of clothes that were selling at $80 two months ago are being offered at $30 or under today, and shoes that brought $14 and $18 a month ago may be had for $6 today.

Recently an active and powerful man in Wall Street in banking, railroad and industrial circles was asked as to what he thought of the future trend of commodity prices. According to a press dispatch his answer was as follows:

"There is going to be further liquidation in commodity prices. The liquidation that has already taken place in foodstuffs and commodities has made it certain that we are past the danger point that was feared by bankers. But further liquidation in foodstuffs, commodities and raw and finished materials is going to take place for two different reasons.

"First, our banks here are not able to give the credit that was advanced last year to enable foreigners to buy in this market. This week's foreign trade statement for the seven months of the year shows a falling off of $309,000,000 in exports, compared with the same period of 1919, while imports were $3,482,000,000 against $1,995,000,000 for the first seven months of last year. Under such conditions the existing high prices can not be maintained."

His second reason was the change of the public's ways from extravagant to economical.

Prices for grains are going to go down but do not think they will ever establish themselves at the pre-war level. They have moved up too many notches for that. It is believed that if grain prices do recede to the pre-war level it will be for only a short time.

Reports of rains during the current week come from nearly every state, and, while some have had too much and others not enough, the corn crop in general has been greatly benefitted. Winter wheat is nearly all threshed and fall plowing started. Spring wheat is being harvested and reports of damage from rust continue to come in. Threshing returns show oats to be turning out a normal yield. Barley is averaging about the same as oats but rye is not so good. Late potatoes are coming along fine and, with the exception of a few reports of excessive rainfall, the outlook for a big yield is good.

LAST MINUTE WIRES

DETROIT—Heavy receipts cause grains to weaken and prices go lower. Beans steady. The hay market is not liberally supplied and tone is firm.

CHICAGO—Export demand drops off and grain prices decline. Larger receipts also help weaken market. Hogs advance.

(Note: The above summarized wires are received AFTER the balance of the market page is set in type. They contain last minute information up to within one-half hour of going to press.—Editor.

WHEAT APPEARS FIRM

No 2 White	2.22		2.32
No. 2 White	2.22		2.43
No 2 Mixed	2.22		2.32

The wheat market was firm all last week. The main factors that caused this firmness was export demand, farmers inclination to hold their grain and shortage of cars. The market opened somewhat weaker this week owing to the Canadian wheat that is being offered for sale. This wheat from Canada is selling 10c cheaper than United States wheat and foreigners are beginning to look in that direction for their supplies. For this reason it is thought that demand from Europe for our wheat will drop off for some time; at least until it is found out how much wheat Canada will have for exporting. The quality of wheat arriving at Winnipeg at present is very high but that country has suffered considerably from hot and dry winds and shriveled wheat is expected to come forward in large volumes soon and then exporters will have to turn to us for good wheat.

Export business is not as good as it might be. England is out of the market and has been for some time. France has been out a while but is expected to resume buying the early part of this month. Greece has ordered 7,000,000 bushels from Canada. These are the main buyers.

Receipts of wheat are very disappointing as farmers are reluctant to sell their grain at prevailing prices and it is believed by many dealers that the farmers will stop selling entirely if the prices go much lower as they feel that prices should advance instead of decline. Many of them will not sell now because they say wheat should bring $3 and they are willing to hold until it does. This is causing much uneasiness among dealers as many of them have sold in advance anticipating large receipts and now they are worried as to where they are going to get the grain to fill their orders.

Car shortage is causing a lot of trouble in the west, especially in Kansas, and the shortage is so serious there that many farmers that are selling now have to dump their grain on the ground as elevators and storage bins are all full.

CORN FOLLOWS WHEAT

No. 2 Yellow	2.02		
No 4 Yellow	2.00		

Corn has followed the trend of the wheat market rather close the past week and the prices are slightly above those quoted in our last issue. Like in wheat farmers are inclined to hold their old corn. They are holding for two reasons. The first one is prices too low, the other is early frost scare. There is no question but what we will have lots of soft corn this fall, especially in Iowa, Indiana and Illinois, but this is not going to affect the trend of prices to a very great extent owing to the large carry-over we will have. The big question is how to dispose of this soft corn. If feeding operations were carried on under normal conditions, there would be little trouble in disposing of the crop but with the shrinkage in hog values and financial conditions unfavorable there is little chance of farmers keeping any more stock than necessary, so what is to be done with it? Argentine corn is still selling in the east far cheaper than western corn can be sold on the eastern markets.

OATS WEAK

NEW OAT PRICES PER BU., AUG. 31, '20			
Grade	Detroit	Chicago	N. Y.
No. 2 White	.71½	.71¾	.84
No. 3 White	.70	.69¾	
No. 4 White	.67½		
PRICES ONE YEAR AGO			
Grade	Detroit	Chicago	N. Y.
Standard	.81	.77	.84
No. 3 White	.80	.76	.83
No. 4 White	79	.75	.82

Contrary to expectations, oats did not follow corn during the past week at Detroit. While corn became stronger as the week advanced oats became weaker and loss several cents on the Detroit market, but Chicago claims this grain showed firmness all week on her market and prices advanced slightly. Oats at New York are off a few cents. Receipts are fair to liberal on all markets and the demand, with the exception of Detroit is good. There is some export demand for oats at present. Holland bought around 100,000 bushels a couple of weeks ago and it is rummored that other European nations are asking for prices with the intentions of making purchases in the near future if the price is satisfactory. Foreign reports say that the yields have been cut down in France and England by wet weather while the crop in other nations has suffered from dry and hot weather. The United States and Canada will both have a bigger crop than was harvested last year and will be able to care for quite an export demand before the strain is felt. The new crop has been moving to market freely but it is believed that this after-threshing movement is about over and receipts will fall off shortly.

RYE EASY

Rye is holding its own and is quiet and easy on the Detroit market. It is quoted at $2 for No. 2. Chicago reports an erratic market and the price lower. There is still a fair volume of export business done in this grain as foreigners are after the cheapest bread flour they can get.

"A large export in rye flour could probably be done were mills able to secure liberal supplies of the grain," says the *Rosenbaum Review*. But offerings are rather light at present.

BEANS INACTIVE

The market for beans in Detroit dropped 25c during current week but retained last week's prices at both Chicago and New York with the tone of the markets easy and inactive. The bean market is hard to understand. It declines when everything points to an advance, but in the face of all this we are fully convinced that prices are going to take a change for the better in the near future. The crop in this state is coming along fine.

Potato prices are standing still on the Detroit market, declining on the Chicago market and advancing in New York. Eastern dealers have had to raise prices because eastern farmers, especially those in Maine, are not making many sales. They say prices are too low as they are only offered $2 and $2.50 a barrel and they claim that it costs them $3 a barrel to produce potatoes.

According to the *Produce News*, cables from Copenhagen report heavy shipments of Danish potatoes afloat for the New York market which are due to arrive there sometime this week. "There is much curiosity in the trade as to what incentive there is to bring the Danish potatoes here at this time, especially newly dug stock which is apt to spoil in transit as there is little or no refrigeration on the steamers," says the *News*. "The only incentive for bringing these potatoes here under present conditions is the low rate of exchange as the Danish kroner can be purchased here at .1470c which leaves the margin of over 25 per cent and speculators who purchase their exchange in the United States can afford to sell the potatoes at a loss and take their profits on the exchange margin."

To many points in the East alfalfa shipped from producing points in the west will represent a cost of well above $50 a ton delivered, that is on the basis of the current market and the increased schedule of freight rates. This is an extraordinary figure, being near the prices at which hay was purchased by the East when the market was at about its highest level, around $40 a ton in Kansas City, about two years ago. Serious consideration therefore is being given by hay dealers as to whether the increased cost of hay delivered in the East will reduce to any extent the demand for Western forage. While it is generally felt that a continuation of the present price levels will serve to check buying by the East, many observers in the trade anticipate a setback in prices sufficient to offset the increased cost of transporting hay from the West to the distant points in the East and Southeast. Buyers have largely accumulated stocks to supply the demand of thirty and sixty days away, and

doubtless these will hold off from further buying immediately after the new rates go into effect until their effect is determined. A somewhat freer movement is expected in view of the more efficient service expected on the part of carriers, if the purchaser will stand for the increase.—*—Price Current Grain Reporter.*

BOSTON WOOL MARKET

The Commercial Bulletin says:

"The demand for wool continues of small proportions and values, especial for the finer grades are not yet on a settled basis. The market has been cheered somewhat by the advices from the London colonial auctions. The foreign primary markets are unchanged.

"The goods market is without material change and the new clip movement shows no new features."

LIVESTOCK MARKETS
By H. H. Mack

During the past week, the entire live stock list has undergone a decided change for the better and all present indications favor a continuance of the present improvement. Chicago had a good trade all last week, the improvement in cattle values equaling from 25 to 75 cents per cwt. over the close of the week before in some departments, the gain equalled $1 per cwt. All markets report an active demand for all of the better grades of cattle but also mention that the average quality is very poor, scarcely any dry-fed cattle coming into the market. The top in Chicago, for last week, for prime steers, was $17.75, breaking another record for prices since the early spring season. Good butcher cows and heifers were called 25 to 50c higher for the week and bulls were dull and slow. All through the west, calves took a big jump, last week, Chicago showing a gain of $2 per cwt. All cattle markets had a strong opening on Monday of this week as a result of a marked improvement in the eastern dressed meat trade.

Buffalo showed a big gain in cattle values on Monday but the average quality was very disappointing, scarcely any dry fed stock coming to hand. One of the main causes for the low prices that have prevailed in the cattle division of the trade, all through the spring and summer has been the fact that growers in all parts of the country were forced to sell their stock long before it was ready to kill in order to tide over the tight-money crisis; western bankers had been guilty of a lot of wild-cat financiering and in order to save their faces they were obliged to call in their cattle loans long before the growers were ready to pay them. The crisis is not yet past but a decided improvement is noted; money is easier and bankers are consenting to the holding of some large droves of cattle until they show some killing quality.

Sheep and Lamb Trade

The opinion, expressed in this column, last week, that sheep and lambs were hovering around the bottom for the season, has been amply vindicated by the course of the market during the past six days; beginning with Monday of last week, the market began to work higher and every day, until the week-end, a little was added to the selling price of both sheep and lambs. At the close, Saturday, in Chicago, all grades of fat lambs looked $2 to $3 higher than on the close of the previous week, fat sheep and yearlings were in much more active demand and the whole market exihibited a strong undertone, a condition which was not noted at any preceding date during the month. Demand for feeding lambs was active all around the western market circle. Chicago reporting the presence of more countrymen than during any preceding week this year. There are indications of a renewed interest on the part of wool buyers and manufacturers but not enough actual sales have been made to establish a reliable set of quotations. There are persistent rumors extant, to the effect, that the American Woolen Company will resume operations after Labor Day.

Live Hogs and Provisions

Last week's market history in the hog department was decidedly encouraging to the selling side of the market; beginning on last Thursday, prices were quoted higher each succeeding day in this department of the trade. On Monday of this week, $16 per cwt. was paid for mixed hogs in the Detroit market and all of the leading markets of the country reported an active demand and a strong undertone.

The live hog trade of the country has been dominated for several months past, by an "over-bought" provision market; all through the early part of the present season live stock experts and country operators were decidedly bullish on the future of speculative provision list and many of them loaded up heavily with option lard and pork; the market has declined steadily under this top-heavy load until mess pork is from $5 to $7 per barrel lower than at the time when many of the purchases, referred to above, were made. Lard and ribs have declined so that going prices are now on a parity with pork. The "longs" in the provision pit held on until the time approached for the liquidation of the September option when, it is reported, many of them sold their holdings; if the above information is found to tally with the facts in the case, higher prices for both provisions and live hogs may be looked for during the next 30 days. The writer has frequently, of late, expressed confidence in the future of the hog and commodity market, and he is more positive in his belief, now, than at any preceding date.

Detroit had an active cattle trade all last week and prices were unevenly from 25 to 50 cents higher than the average of the week before for everything except canners. While offerings of Michigan cattle show some improvement, very few reach this market good enough to bring about $11 per cwt. Calves were strong and active all last week and on last Monday, the best sold for $20 per cwt. Sheep and lambs have been in fairly active demand, the best lambs selling for $14 per cwt.

DETROIT PRODUCE MARKET

Receipts of poultry have not been large for a few days. Dealers want good, fat hens. Broilers are quoted higher and it is probable that fine hens would bring over the present quotation. Hogs and calves are steady and in only fair supply. The market is well supplied with vegetables and dealers take everything offered. Fruits are in good demand and there are fair supplies of apples, pears and plums, but the best apples and not coming to market as the price is too low. The cost of picking and shipping is so great that apples cannot be sold at the present level without loss. It is very difficult to secure any peaches. Receipts of berries are small. Butter and eggs are firm and in active demand.

Plums—$2.50@3 per bu.

Peaches—$3.50@4.50 per bu.

Huckleberries—$9 per bu.

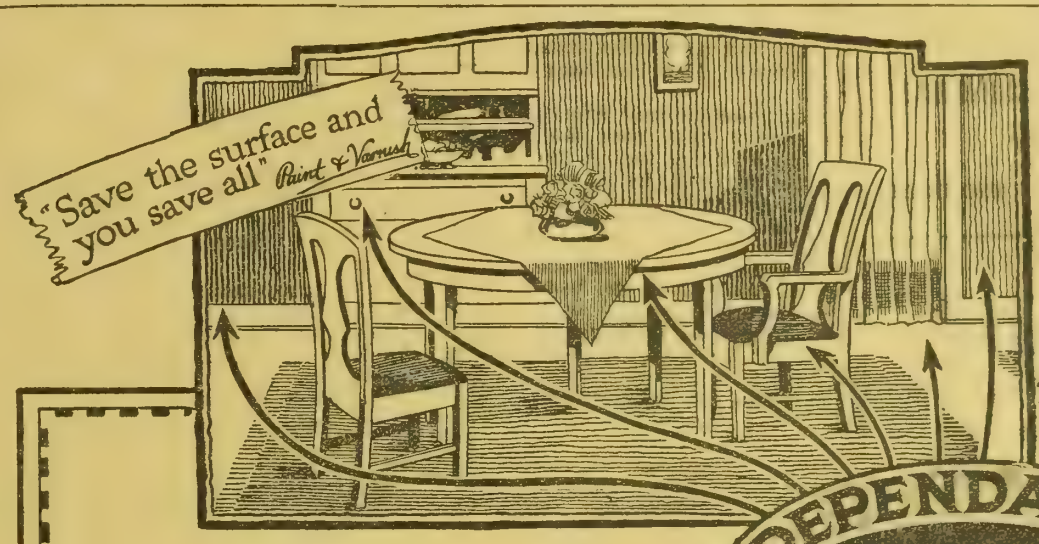
Apples—New, Michigan, $1@1.50 per bu.

Pears—Bartletts, $3.50@$4 per bu., smaller varieties, $2.50@2.75 per bu.

Cabbage—60@79c per bu.

Popcorn—Shelled, 10c per lb.

Green corn—20@25c per doz.



DEPENDABLE HEATH & MILLIGAN PAINTS

How About Redecorating?

Are your rooms cheerful for the long indoor months? Do they look the worse from summer wear? Aren't you a little tired of the color scheme in some of them? Send for a copy of our Free Book, "How to Paint." It settles ever room painting problem **right.** Pages 37 to 41 tell all about rooms.

How to Paint Walls (which have been papered or calcimined.)
How to Paint Walls (new or old).
How to Renew Old Furniture.
What to do with Bare and Worn Floors.
How to Mahoganize Woodwork.
How to Enamel at Home.

Others of the 64 pages teli about 120 ways to save the surface and beautify with Heath & Milligan Dependable Paint and Varnish Products. There are 100 distinct products for you to use around the farm and home (inside and out.) All dependable since 1851.

To find these paints look for our trade-mark. It is on every package. Use it as your safeguard and save time, money and worry.

HEATH & MILLIGAN MANUFACTURING COMPANY

Big Bargains are constantly offered

"Hearts of Three"

By JACK LONDON

Author of the "Valley of the Moon," and other stories.

BUT Leoncia shook her head wearily. "No," she said after further urging. "I never want to see the Valley of the Lost Souls again, nor ever to hear it mentioned. There is where I lost Francis to that woman."

"It was all a mistake, darling sister But who was to know? I did not. You did not. Nor did Francis. He played the man's part fairly and squarely. Not knowing that you and I were brother and sister, believing that we were truly betrothed—as we were at the time—he refrained from trying to win you from me, and he rendered further temptation impossible and saved the lives of all of us by marrying the Queen."

"I miss you and Francis singing your everlasting 'Back to back against the Mainmast,'" she murmured sadly and irrelevantly.

Quiet tears welled into her eyes and brimmed over as she turned away, passed down the steps of the veranda, crossed the grounds, and aimlessly descended the hill. For the twentieth time since she had last seen Francis she pursued the same course, covering the same ground from the time she first espied him rowing to the beach from the Angelique, through her dragging him into the jungle to save him from her irate men-folk, to the moment, with drawn revolver, when she had kissed him and urged him into the boat and away. This had been his first visit.

Next, she covered every detail of his second visit from the moment, coming up from behind the rock after her swim in the lagoon, she had gazed upon him leaning against the rock as he scribbled his first note to her, through her startled flight into the jungle, the bite on her knee of the labarri (which she had mistaken for a deadly viperine,) to her recoiling collision against Francis and her faint on the sand. And, under her parasol she sat down on the very spot where she had fainted and come to, to find him preparing to suck the poison from the wound which he had already excoriated. As she remembered back, she realized that it had been the pain of the excoriation which brought her to her senses.

Deep she was in the sweet recollections of how she had slapped his cheek even as his lips approached her knee, blushed with her face hidden in her hands, laughed because her foot had been made asleep by his too efficient tourniquet, turned white with anger when he reminded her that she considered him the murderer of her uncle, and repulsed his offer to untie the tourniquet. So deep was she in such fond recollections of only the other day that yet seemed separated from the present by half a century, such was the wealth of episode, adventure and tender passages which had intervened, that she did not see the rattletrap rented carriage from San Antonio drive up the beach road. Nor did she see a lady, fashionably clad in advertisement that she was from New York, dismiss the carriage and proceed toward her on foot. This lady, who was none other than the Queen, Francis' wife, likewise sheltered herself beneath a parasol from the tropic sun.

Standing directly behind Leoncia she did not realize that she had surprised the girl in a moment of high renunciation. All that she did know was that she saw Leoncia draw from her breast and gaze long at a tiny photograph. Over her shoulder the Queen made it out to be a snapshot of Francis whereupon her mad jealousy raged anew. A poinard flashed to her hand from its sheath within the bosom of her dress. The quickness of this movement was sufficient to warn Leoncia. who tilted her parasol to look up at whatever person stood at her back. Too dreary ever to feel surprised, she greeted the Queen as casually as if she had parted from her an hour before. Even the poinard failed to arouse in her curiosity or fear Perhaps, had she displayed startlement and fear, the Queen might have driven the steel home to her. As it was, she could only cry out.

"You are a vile woman! A vile, vile woman!"

To which Leoncia merely shrugged her shoulders, and said:

"You would better keep your parasol between you and the sun."

The Queen passed round in front of her, facing her and staring down at her with a woman's wrath compounded of such jealousy as to be speechless.

"Why?" Leoncia was the first to speak, after a long pause. "Why am I a vile woman?"

"Because you are a thief," the Queen flamed. "Because you are a stealer of men, yourself married. Because you are unfaithful to your husband—in heart, at least, since more than that has so far been impossible."

"I have no husband," Leoncia answered quietly.

"Husband to be then—I thought you were married the day after our departure."

"I have no husband to be," Leoncia continued with the same quietness.

So swiftly tense did the other woman become that Leoncia idly thought of her as a tigress.

"Henry Morgan!" the Queen cried.

"He is my brother."

"A word which I have discovered is of wide meaning, Leoncia Solano. In New York there are worshippers at certain altars who call all men 'brothers,' all women 'sisters.'"

"His father was my father," Leoncia explained with patient explicitness. "His mother was my mother. We are full brother and sister."

"And Francis?" the other queried convinced with sudden access of interest. "Are you, too, his sister?"

Leoncia shook her head.

"Then you do love Francis!" the Queen charged, smarting with disappointment.

"You have him," said Leoncia.

"No; for you have taken him from me."

Leoncia slowly and sadly shook her head and idly gazed out over the heat-shimmering surface of Chiriqui Lagoon.

After a long lapse of silence, she said, wearily, "Believe that. Believe anything."

"I divined it in you from the first," the Queen cried. "You have a strange power over men. I am a woman not unbeautiful. Since I have been out in the world I have watched the eyes of men looking at men. I know I am not all undesirable. Even have the wretched males of my Lost Valley with downcast eyes looked love at me. One dared more than look, and he died for, or because of me, and was flung into the whirl of waters to his fate. And yet you, with this woman's power of your, strangely exercise it over my Francis so that in my very arms he thinks of you. I know it. I know that even then he thinks of you."

Her last words were the cry of a passion stricken and breaking heart. And the next moment, though very little to Leoncia's surprise at anything, the Queen dropped her knife in the sand and sank down, buried her face in her hands, and surrendered to the weakness of hysteric grief. Almost idly, and quite mechanically, Leoncia put her arm around her and comforted her. For many minutes this continued, when the Queen growing more calm, spoke with sudden determination.

"I left Francis the moment I knew he loved you," she said. "I drove my knife into the photograph of you he keeps in his bedroom and returned here to do the same to you in person. But I was wrong. It is not your fault, nor Francis.' It is my fault that I have failed to win his love. Not you, but I it is who must die. But first, I must go back to my valley and recoved my treasure. In the temple called Wall Street Francis is in great trouble. His fortune may be taken away from him and he requires another fortune to save his fortune. I have that fortune, and there is no time to lost. Will you and yours help me? It is for Francis' sake."

He started for the door, but was stopped by Henry—Chapter XXIX.

CHAPTER XXVII

SO IT came about that the Valley of the Lost Souls was invaded subterraneously from opposite directions by two parties of treasure seekers. From one side, and quickly came the Queen and Leoncia, Henry Morgan, and the Solanos. Far more slowly, although they had started long in advance, did Torres and the Jefe progress. The first attack on the mountain had proved the biggest obstacle. To blow open an entrance to the Maya caves had required more dynamite than they had originally brought, while the rock had proved subborner than they expected. Further, when they had finally made a way, it had proved to be above the cave floor, so that more blasting had been required to drain off the water. And having blasted their way into the water-logged mummies of the conquistadores and to the Room of the Idols, they had to blast their way out again and on into the heart of the mountain. But first, ere they continued on, Torres looted the ruby eyes of Chia and the emerald eyes of Hzatzl.

Meanwhile, with scarcely any delays, the Queen and her party penetrated to the Valley through the mountain on the opposite side. Nor did they entirely duplicate the course of their earlier traverse. The Queen, through long gazing into her Mirror, knew every inch of the way. Where the underground river plunged thru the passage and out into the passage and out into the bosom of the Gualaca River it was impossible to take in their boats. But, by assiduous search under her directions they found the tiny mouth of a cave on the steep wall of the cliff, so shielded by a growth of mountain berries that only by knowing for what they sought could they have found it. By main strength, applied to the coils of rope which they had brought along, they hoisted their canoes up the cliff, portaged them on their shoulders thru the winding passage and launched them on the subter-

terranean river itself where it ran so broadly and placidly between wide banks that they paddled easily against its slack current. At other times, where the river proved too swift, they lined the canoes up by towing from the bank; and whereever the river made a plunge thru the solid tie-ribs of mountains, the Queen showed them the obviously hewn and patented ancient passages through which to portage their light crafts around.

"Here we leave the canoes," the Queen directed at last, and the men began securely mooring them to the bank in the light of the flickering torches. "It is but a short distance through the last passage. Then we will come to a small opening in the cliff, shielded by climbing vines and ferns, and look down upon the spot where my house once stood beside the whirl of waters. The ropes will be necessary in order to descend the cliff, but it is only about fifty feet."

Henry with an electric torch, led the way, the Queen beside him, while old Enrico and Leoncia brought up the rear, vigilant to see that no possible half-hearted peon or Indian boatman should slip back and run away. But when the party came to where the mouth of the passage ought to have been, there was no mouth. The passage ceased, being blocked off solidly from floor to roof by a debris of crumbled rocks that varied in size from paving stones to native houses.

"Who could have done this?" the Queen exclaimed angrily.

But Henry, after a cursory examination, reassured her.

"It's just a slide of rock," he said, " a superficial fault in the outer skin of the mountain that has slipped; and it won't take us long with our dynamite to remedy it. Lucky we fetched a supply along."

But it did take long. For what was the remainder of the day and throughout the night they toiled. Large charges of explosive were not used because of Henry's fear of exciting a greater slip along the fault overhead. What dynamite was used was for the purpose of loosening up the rubble so that they could shift it back along the passage at eight the following morning the charge was exploded that opened to them the first glimmer of daylight ahead. After that they worked carefully, being apprehensive of jarring down fresh slides. At the last, they were baffled by a ten ton block of rock in the very mouth of the passage. Through crevices on either side of it they could squeeze their arms into the blazing sunshine, yet the stone block thwarted them. No leverage they applied could more than quiver it, and Henry decided on one final blast that would topple it out and down into the Valley.

"They'll certainly know visitors are coming, the way we've been knocking on their back door for the last fifteen hours," he laughed, as he prepared to light the fuse.

Assembled before the altar of the Sun God at the Long House, the entire population was indeed aware, and anxiously aware, of the coming of visitors. So disastrous had been their experiences with their last ones when the lake dwelling had been burned and their Queen lost to them, that they were now begging the Sun God to send no more visitors. But upon one thing, having been passionately harangued by their priest, they were resolved; namely, to kill at sight and without parley whatever newcomers did descend upon them.

"Even Da Vasco himself," the priest had cried.

"Even Da Vasco !" tne Lost Souls had responded.

All were armed with spears, warclubs and bows and arrows; and while they waited they continued to pray before the altar. Every few minutes runners arrived from the lake, making the same reports that while the mountain still labored thunderously nothing had emerged from it.

The little girl of ten, the Maid of the Long House who had entertained Leoncia, was the first to spy out new arrivals. This was made possible because of the tribe's attention being fixed on the rumbling mountain beside the lake. No one expected visitors out of the mountain on the opposite side of the valley.

"Da Vasco !" she cried "Da Vasco !"

All looked and saw, not fifty yards away, Torres, the Jefe, and their gang of followers, emerging into the open clearing. Torres wore again the helmet he had filched from his withered ancestor in the Chamber of the Mummies. Their greeting was instant and warm, taking the form of a flight of arrows that arched into them and stretched two of the followers on the ground. Next, the Lost Souls, men and women, charged; while the rifles of Torres' men began to speak. So unexpected was this charge, so swiftly made and with so short a distance to cover, that, though many fell before the bullets, a number reached the invaders engaged in a desperate hand-to-hand conflict. Here the advantage of firearms was minimized, and gendarmes and others were thrust thru by spears or had their skulls cracked under the ponderous clubs.

In the end, however, the Lost Souls were outfought, thanks chiefly to the revolvers that could kill in the thickest of the scuffling. The survivors fled, but of the invaders half were down and down forever. The women having in drastic fashion attended to every man who fell wounded. The Jefe was spluttering with pain and rage at an arrow which had perforated his arm; nor could he be appeased until Vicente cut off the barbed head and pulled out the shaft.

Torres, beyond an aching shoulder where a club had hit him, was uninjured; and he became jubilant when he saw the old priest dying on the ground with his head resting on the little maid's knees.

Since there were no wounded of their own to be attended to with rough and ready surgery, Torres and the Jefe led the way to the lake, skirted its shores, and came to the ruins of the Queen's dwelling. Only charred stumps of piles, projecting above the water showed where it had once stood. Torres was nonplussed, but the Jefe was furious.

"Here, right in this house that was, the treasure chest stood," he stammered.

"A wild goose chase," the Jefe grunted. "Senor Torres, I always suspected you were a fool."

"How was I to have known the place burned down?"

"You ought to have known, you who are so very wise in all things," the Jefe bickered back. "But you can't fool me. I had my eye on you. I saw you rob the emeralds and rubies from the eye sockets of the Maya gods. That much you shall divide with me, and now."

"Wait, wait, be a trifle patient," Torres begged. "Let us first investigate. Of course I shall divide the four gems with you—but what are they compared with a whole chestful? It was light fragile house. The chest may have fallen into the water undamaged by fire when the roof fell in. And water will not damage precious stones."

In amongst the burnt piling the Jefe sent his men to investigate, and they waded and swam about in the shoal water, being careful to avoid being caught by the outlying suck of the whirlpool. Augustino, the Silent, made the find, close in to shore.

"I am standing on something," he announced, the level of the lake barely to his knees.

Torres punged in, and, reaching under till he buried his head and shoulders, felt out the object.

"It is the chest, I am certain," he declared. "—Come ! All of you ! Drag this out to the dry land so that we may examine into it !"

But when this was accomplished, and just as he bent to open the lid, the Jefe stopped him.

"Go back into the water, the lot of you," he commanded his men. "There are a number of chests like this, and the expedition will be a failure if we don't find them. One chest would not pay the expenses."

Not until all the men were floundering and groping in the water, did Torres raise the lid. The Jefe stood transfixed. He could only gaze and mutter inarticulate mouthings.

"Now will you believe?" Torres queried. "It is beyond price. We are the richest two men in Panama, in South America, in the world. This is the Maya treasure. We heard of it when we were boys. Our fathers and our grandfathers dreamed of it. The Conquistadores failed to find it. And it is ours—ours !"

And, while the two men, almost stupefied, stood and stared, one by one their followers crept out of the water, formed a silent semi-circle at their backs and likewise stared. Neither did the Jefe and Torres know their men stood at their backs, nor did the men know of the Lost Souls that were creeping stealthily upon them from the rear. As it was, all were staring at the treasure with fascinated amazement when the attack was sprung.

Bows and arrows, at ten yards distance, are deadly, especially when due time is taken to make certain of aim. Two-thirds of the treasure-seekers went down simultaneously. Through Vincente, who had chanced to be standing directly behind Torres no less than two spears and five arrows had perforated. The handful of survivors had barely time to seize their rifles and whirl, when the club attack was upon them. In this Rafael and Ignacio, two of the gendarmes who had been on the adventure to the Juchitan oil fields, almost immediately had their skulls cracked. And, as usual, the Lost Souls women saw to it that the wounded did not remain wounded long.

The end for Torres and the Jefe was but a matter of moments, when a loud roar from the mountain followed by a crashing avalanche of rock created a diversion. The few Lost Souls that remained alive, darted back terror-stricken into the shelt-

Golden Rule Service in Town or Country

THE USL Battery Man is picked because he knows batteries and how to repair and keep them in order—no matter what their brand.

But the main thing we pick him out for is that he is trustworthy and can be counted on to give courteous, efficient service—Golden Rule Service.

If your battery is getting a little lame you ought to get the USL man's advice. It may be a case where, if nothing is done, the battery will soon go to pieces inside, but where a repair will make it as lively as a colt. The USL man guarantees on an adjustment basis all repairs, no matter what the brand of the battery.

U. S. Light & Heat Corporation
Niagara Falls, N. Y.

Likely there's one of our fifteen hundred service stations in your town. If there isn't, for the address of the handiest, just drop a post card to the nearest of the following distributors:

United Electric Service Co., Detroit, Mich.
U. S. Light & Heat Corp'n, Chicago, Ill.

The Secret of High Taxes

ACCORDING to experts in the Federal Census Bureau, Michigan's general tax levy in 1919 was $7.31 per capita, being the largest of any of the states except Arizona and Nevada. This is not a record to be proud of. There is no good reason why the per capita tax of this state should be any higher than the per capita tax of the average state. On the contrary there are many good reasons why it should be less. No state in the union, with the possible exception of New York and Illinois has enjoyed such an era of industrial expansion and prosperity as Michigan. City sites have increased enormously in value. Investments in buildings and equipment of manufactories have been stupendous. And agriculture has not stood still by any means.

The apologist for the last four years' administration of the affairs of Michigan finds the increased cost of maintaining the public institutions a satisfactory reason for the increase in taxes. But it ought not to cost Michigan more to support her prisons, asylums and universities than it does other states. If it does cost her more there's something wrong somewhere,—something that needs to be looked into.

In ferreting out the true facts about the increased tax rate one discovers some unpleasant things. It is found that the last session of the legislature created a number of boards and commissions, carrying large appropriations, the need and value of which are questionable. It is found that many of these appropriation measures had their inception in the Governor's office, and were lobbyed through the legislature by the Governor himself. While it is true that the appropriations for new boards and commissions are not in the aggregate large compared with the total state budget, they reflect the spirit of profligacy which soon became a habit in the early history of the present administration.

The truth is that Michigan has had neither a Governor nor a legislature the past four years that cared a tinker's damn about how the people's money should be spent or how high the taxes might be. The question of economy seems to have been entirely absent from the consideration of appropriation measures. The determining factors have not been what the people needed or wanted, but what the politicians in power needed and wanted to repay their friends for political service. No one need to look any further for an explanation of Michigan's $7.31 per capita tax.

As we write this the outcome of the primary election is still in doubt. We don't know whether any, all or a part of the numerous farmer candidates have been successful. We hope they have, because in the event of their election we believe Michigan will stand in a fair way to enjoy once more an old-fashioned regime of economy and business efficiency in state affairs. Whether or not the farmer candidates have won out farmers ought not to lose one whit of interest in the political situation or the conduct of the men who have been nominated and will probably be elected. Eternal vigilance is the price of common sense laws and a sane expenditure of public money. Therefore, be on your guard.

The Wool Pool

JUST AS we expected. Interests unfriendly to the Farm Bureau have grabbed onto the wool pool in an effort to show that "once more" the farmer has been the victim of his well-intentioned friends. These enemies claim that the Farm Bureau wool pool has cost the farmers several million dollars. They say that the farmers could have and many of them would have sold their wool at the top of the market had it not been for the siren voice of the Farm Bureau. Are these statements true? Let's examine the evidence.

In the first place the pooling of wool by the Bureau had nothing to do with the bottom dropping out of the wool market. Any effect that the proposed pooling might have had on the market would have been to strengthen instead of weaken it. The closing of the woolen mills, the consumer's protest against high clothing prices and general financial conditions were responsible for the crash in the market.

In the second place, while we now know that may farmers could have secured a higher price for their wool than they now seem likely to get, no one knew it when the pool was being clipped. Not all the farmers have pooled their wool with the Bureau. How many of these sold their clip from the back of the sheep at 65 to 70 cents per pound?

In the third place, as the Bureau has recently pointed out, the great majority of wool now in pool was placed there at a time when wool prices were much lower than they are now. Hence, the patron of the wool pool has actually benefitted from the pool.

Remember that the Farm Bureau had its enemies. Very bitter enemies they are, too. Men who have made their fortunes out of wool and other products that the Bureau is handling or purposes to handle do not intend to sit idly by while the Bureau runs off with all the plunder for its members. The decline in the wool market gave these enemies the opportunity they were looking for to discredit the Bureau. They have played their cards well, but unfortunately for their game the facts do not bear out their statements.

Suppose no attempt had been made this year to pool the wool or to instruct the farmers in an orderly and business-like disposal of their clip. The first drop in the price would have frightened thousands into unloading. That would have depressed the price still more and brought out more wool. When a market once starts downward it works automatically, —more wool, lower prices; lower prices, more wool etc., until the bottom is gone entirely. It looks now as if that very thing would have happened this year had it not been for the Farm Bureau wool pool which kept enough wool out of the market to check its downward flight to zero.

Beans

OUR MARKET editor is obsessed with the idea that beans are going up. Every little crumb of comfort that comes his way he gobbles up like a hungry tramp. He reminds us of the man who was shipwrecked and had given up all hope of rescue when he spied a straw floating upon the surface of the sea. He clutched at it but history does not record whether he survived or perished. But history will record that every time our market editor jubilantly proclaimed higher bean prices a bean bear came out of the bushes somewhere and smote him cruelly across the shins. Instead of going up the bean market has had a devilish habit of late of going down. And to what depths it may yet sink no man, not even the M. B. F. market editor, knoweth.

At the risk of being accused of inconsistency we are going to bank on the judgment of our market editor. Beans are low now for precisely the same reasons that wheat, corn, and oats are low. In other words the markets on all farm products have been hit with the same club and it's going to take them some time to recover from the shock. The present price of beans is all out of proportion to their intrinsic food value and the price of other food products. The supply is no greater than the potential demand. But the potential demand has not yet become an actual demand though we expect the transformation to take place about the first of the year.

Increasing unemployment should, strange as it seems, be a big factor in the future bean market. For four years labor has been prosperous. Lowly dishes like beans, corned beef and cabbage, etc., have been gradually banished from the bill of fare, and more expensive foods have taken their place. But now men are being thrown out of employment. Wages are being cut off, and thousands of people are again forced to economize or go hungry. One does not have to stretch the imagination far to visualize the bean again taking its place of honor on the workingman's table, as the great American dish. A few cents worth of beans will provide as much nourishment as can be secured from other vegetables and meats costing four to five times as much. Increased consumption as a result of this condition might in a short time so stimulate demand that the stagnation in the market would quickly disappear.

At the present time the bean crop market is all but demoralized. Enough of the old crop has been carried over to take care of the daily consumption and dealers are not anxious to purchase large quantities or to make contracts for future supplies until they know something more about the yield of the new crop. In every bean growing state the growers are determined not to sell their new crop at any such prices as now prevail. To do so would only make a bad condition worse. It is felt that the price has reached close to bottom and that future changes will be for the better.

Who Profiteers

A GREAT deal of injustice has been done to farmers by misinformed newspapers and people of the cities who find the easiest and most sensational way to explain the high cost of living to charge the farmers with profiteering. They have never realized what an absurdly small portion of the consumer's dollar the farmer actually gets. Some of the city dailies, however, have been doing a little investigating and are able to clear the farmer of the charge of profiteering. Among these papers is the Detroit Times which recently published the following upon the subject:

"An apple grower whose orchard is just across Lake Michigan from Chicago picked Red Astrakans and shipped them to a reputable Chicago commission house the other day at a total cost to himself of 36 cents per bushel. His return from the shipment was 35 cents per bushel. Loss one cent per bushel. At the same time Red Astrakans were selling in the retail grocery stores of Chicago at the rate of $5 a bushel.

"What's the answer?

"Answer: The American system of passing food from the grower to the consumer is bad beyond words and a source of danger to existing institutions.

"Incidentally, city folks who denounce the farmer as a profiteer had better take a reef in their opinion. About the only profiteering farmers visible to the naked eye are those in the vicinity of cities who charge all that the automobile traffic will bear. Can you blame 'em much?"

Playing the Game Square for the Farmers

"YOUR PAPER, The Business Farmer, is the only one in the history of the country that is playing the game for a square deal for the farmers," writes an enthusiastic reader to the editor.

Yes, friend, we are trying to play the game square for the farmer. We are trying to play the game square with the world. The square deal cannot be square unless all its angles are right angles. If one of its sides is a little longer than the other it is not square. To some people the square deal means giving them the long end of the deal and the other fellow the short end. Any move to lengthen the other fellow's end and shorten theirs is vigorously opposed. In the game of life the farmer has always had the short end. We believe in adding to it, so that all sides may be symmetrical and equal in length and all the angles square.

What the Neighbors Say

DOES IT PAY TO TRADE AT HOME

I saw an article in your paper recently, "Does it Pay to Trade With the Local Merchants?" For my part, I will say that in the average locality it decidedly does not. If it is to be a paying proposition for the farmers to join to gather in a body in the state farm bureau to better selling conditions, why then hand over our hard earned cash to the small private merchants for our groceries and other necessities of life, when we can just as well buy from a well established mail order house such as Montgomery, Ward, or Sears, Roebuck & Co., or from the Gleaner Clearing House Asociation. One can save from 4 to 25 per cent on his investment and what serves better in the American farm home than dealing in this way? If we deal in selling farm produce, the retail merchant and jobber is left out of the transaction. The same rule will apply to the retail merchant in buying. They will be thus eliminated. The article says what would we do if there were no merchants? Well, there would only be less of them, more people would then be farmers less profiteers, less consumers. The H. C. of L. would be done away with to a great extent and the goods bought through large wholesale and mail order transactions would be at least 15 per cent cheaper and still the "high quality" as a local dealer says, would be the rule. Would not this be a good way for us to help solve the labor problem? Are not some of the profiteers just as able to work 14 hours a day earning their daily bread, just as we do on a farm. Would not 3 good merchants in a town of 1,000 people, all doing a thriving business, each giving the public the benefit of low prices, large sales and small profits, than to have 8 or 10 small, dirty, untidy, grouchy, storekeepers all striving for a measly living, all charging enormous prices, in order to live? If you have ever traded in Detroit, which is the cheaper and who saves you the most money, the clean, well-kept chain stores, or the little old one door on the corner where a large credit business is done and you help to pay for the "other's bad debts?" A penny saved is a penny earned. Let us hear from others and see how they feel about it?—*A Subscriber, Newaygo County.*

Except to say that I believe you are right about there being too many retail stores and to point out that this has nothing to do with the question of trading with mail order houses which contribute nothing to the upbuilding of the community. I am going to reserve comment on this letter until a later date. In the meantime we should be glad to hear from others upon this subject.—Editor.

CATHOLIC BOYS WERE VERY GOOD SOLDIERS

You have done what thousands of people, I believe, have been waiting for, when you declared yourself on the parochial school amendment. I have waited for that myself for some time, and I wish right here to congratulate you for your bigness in showing the world where you stand, as very few papers have been "big" enough to do as you did in your July 12th issue. And in your July 17th issue I see that the "father" of this amendment "tries to explain with damnable lies when nothing else is at hand and when in his stupor of Bolshevistic dreams. And when it comes to the question of patriotism I want to say to him direct that there isn't a man or woman in this country today educated in parochial schools but what would fight at the drop of the hat for this country and government, and that is something I don't think Hamilton could say for himself unless he could put both hands over his face.

We have an illustrious example of that right here in the little town of Fisherville, just when this country declared war against Germany, the priest of the Polish church announced that the allies were sorely in need of help and that the Germans were making terrible inroads into Allied territory. The next morning three automobiles loaded with young men from that parish went to Bay City and enlisted and according to their citations they proved to be fighters of the first class. It would not do for Jas. Hamilton to sling any of his slurs at parochial schools in front of any of those boys or he would never get to be scavenger let alone governor.

He says "there is only one way that an institution can be properly judged and that is by its product." Very well, we will take him at his word.

These boys I have just spoken of are the products of the parochial school and Hamilton's record will never be in line with theirs. I and many more earnestly hope that the public schools do not turn out any more Hamiltons. I have nothing against public schools, for they are all right in their place. The parochial schools also have a purpose and that is to give every child a Christian education. The "biggest" men in the world today tell us that the world needs religion and some of the "little, small" men of Michigan tell us we don't need any.

Our very existance as an independent nation was fostered by the Puritans who came to this land in order to be free to exercise their religious belief as they saw fit. They built this country up to what it is, and we have those narrow minded, hollow headed, weak hearted bigotists that would tear down that great national super structure and if possible replace it with a Hamilton as governor with Lenine and Trotsky policies. Vote for the man that will treat that hypocritcal amendment as a "scrap of paper." Let us hear from Milo D. Campbell on that point.

Hamilton claims from a Syllabus of Pope Pius IX, that, the church has the right to interfere in the discipline of the public schools and the arrangements of the studies of the public schools. Now I hope that there is no one that reads the M. B. F. or any other paper that the above article may appear in, but what will treat that quotation as mere trash and a false elusion. When men of the Ferris kind, the best Governor Michigan ever had, will speak as he has in your July 17 issue (and he is a public school teacher of the greatest reputation) we need have no reasons to guess at the unworthiness of that traitorous amendment.—*Alex Abeare, Auburn, Mich.*

THE NEW ERA

In answer to article in M. B. F. of June 26, 1920, about the New Era Association the above article was in error and we would respectfully have you correct the same as follows:

A letter from the Department of Insurance at this date advises that the figures as published in the Department of Insurance "Summary in Advance" for year ending December 31, 1919, found on page 60 of said report, and in accordance with sworn statement on file in said department, copy of which is on file at this office are as follows:

Total resources $82,433.36
Total liabilities $81,369.81

showing an error in your published statement of $7,513.92 excess liabilities. I might add that at this writing the cash assets of the Association are in excess of $45,000 above all outstanding liabilities. We may have something to say further in regard to this matter later.—*New Era Association, per Chas. D. Sharrow, President.*

We are, of course, glad to make this correction. The information given was published exactly as received from the Insurance Department and we had every reason to believe it was correct. There was no desire nor intention on our part to put the New Era Ass'n in a bad light.—Editor

THE PAROCHIAL SCHOOLS AND THE PRO-GERMANS

In regard to those parochial schools I would say abolish them, and 99 out of every 100 in this county who are not Catholics or Germans would vote to abolish them.

In this county the German Lutherans have organized to fight the amendment. We have had enough of that German dope of late. We have well to do farmers in this county whose sons filled their questionnaire as alien enemy and stayed on the farm during the war. Some were asked to buy bonds and refused until a vigilance committee of about 50 men turned out with ropes and tar and feathers. Our sheriff has rounded up several stills of late most of which were being operated by Germans and some of them belonging to the Lutheran church. Now if these are law-abiding citizens, what are traitors?

What is a nunnery? What is a nun and what are their business? Now Mr. Editor you can do as you please with this but any man or woman who would vote for those parochial schools must be a Catholic or a German sympathizer. If the public schools are not good enough it is time to improve them.—*A Gladwin County Subscriber.*

THE STATE FARM BUREAU AND THE BANKERS

This is merely intended to correct an erroneous idea concerning the Michigan State Farm Bureau at the bankers' convention which you carried in a recent issue of the M. B. F. There were two resolutions concerning the farm bureau introduced at the convention, the first was of the character you suggested in your story, but the final resolution, as adopted, contained an amphatic endorsement of the farm bureau with the request that Mrs. Brown ask the bureau for speakers to attend the next sectional meeting. Trusting that you will accept my calling this matter to you attention in the cooperative spirit in which it is done, I am—*J. P. Powers, Assistant Secretary, Michigan State Farm Bureau.*

Surely we are glad to make the correction. The only reason we called attention to the matter at all was because we were amused at the cautiousness of the bankers who are dependent on agriculture to endorse a movement which is so patently intended to develop agriculture.—Editor.

ANOTHER ANGLE OF PROPOSED SCHOOL AMENDMENT

We have read with much interest the letters about the proposed parochial school amendment and have been able to see the question from an angle not yet sent in.

The public schools are over-burdened at present from the effects of epidemics, scarcity of teachers and from other causes, therefore it seems harmful to turn any additional burden upon the public school system, especially at this time.

The author and others in favor of the amendment forget that parents have the first right to educate their children—the state taking the task only when the parents fair in that line.

If those people fear for the patriotism of church-educated children why not turn their attention to compulsory instruction in English of both children and adults in our state who do not understand American ideals. Yours for the right.—*J. N., Moddersville, Mich.*

AN AMAZED INDEPENDENT

In your issue of July 17th is an article clipped from the Successful Farmer by W. H., of Howard City and printed by you as the Week's Editorial, in which the European nations that have signed the league are highly lauded as great, honorable and liberal nations, while Americans that oppose signing the league are abused, and for the sake of fairness I wish to show the truth in this matter.

First, every one of these great, honorable and liberal nations that were strong enough, have robbed

The Week's Editorial

A FAIR PRICE FOR WHEAT

What is the proper price for wheat?

There are always three answers to this question. One party believes the price is all right at present, another that it is too low, while a third thinks it should go lower, and this difference of opinion brings speculation. Just now there is less speculation in wheat than at any time in recent years with the exception of the period of government control, but there are very sharp differences of opinion as to the value of the grain. Speculation is prevented by the high cost of margins, making large capital necessary, but its absence does not prevent frequent and violent fluctuations in price.

It is a difficult problem the grain dealer has to solve and frequent are the mistakes made in attempting to establish a proper standard of value for any grain. In other years supply and demand ruled the price, but just now and for some time in the past sentiment has had a great deal to do with it and the laws that formerly governed have frequently been set aside. In former years, ever since America has raised a surplus of wheat, the value has been established in competition with the crops of the world. The wheat dealers of all exporting countries met at Liverpool and fought it out. It was the rule that wheat should stop declining as soon as Liverpool became an active buyer, but this year the American market has declined sharply with foreigners buying all the way down.

Early last May No. 1 red wheat in this market was quoted at $3.20; early in August it was down to $2.30 and this loss of nearly a dollar was all built on sentiment. The foreigner was buying all the time and taking the wheat as fast as facilities permitted. The only restriction was the scarcity of transportation. There was no business reason for the decline. It was again the case of the boy sent to the store to sell eggs at a certain price, who refused a higher offer by the storekeeper. The decline was brought about by emotion rather than business. People thought wheat too high and the American producer together with others in the trade, had to put up with losses totalling in the millions at a time when every bushel of surplus could have been sold abroad at the higher price.

There are business men who think wheat is still too high. They reason that war put the price up; the war is over, therefore there is no reason why wheat should not again seek its pre-war level. But these do not take into consideration that the present crop cost the farmer three times as much to produce as did the wheat of former years. The grain cannot go near its former level without inflicting tremendous loss on the American farmer. There are more reasons for an advance from the present level. In former years America was in competition with Russia, Argentina and Australia in furnishing food to Europe, but all these competitors have been eliminated. Russia appears to be out of the exporting business indefinitely. Argentina and Australia have already over-exported; in fact, the former is now a purchaser of American wheat to replace part of that exported to Europe. Neither can enter the export trade again until another crop has been harvested. This leaves Europe dependent on America to a much greater extent than ever before.

Practically every country in Europe needs wheat and nearly all are now buying in America. This creates a condition that, in ordinary business circumstances, puts a further decline out of the question. If the surplus can be sold at a high level, why rob the farmer by putting the price lower.—*Detroit Free Press.*

"How I Made Threshing Day Work Lighter"

Prize Winners in our Letter Contest

WE HAVE been having some time here at the office trying to decide which letters to award the two prizes offered to. There were so many of them and they were all so good and helpful that it seems as if all of the writers that responded so nobly to our request for letters on making threshing day work lighter should receive prizes. We have finally decided to award the prizes as follows:

1st prize, $2, Mrs. Chas. E. Dunn, Pinconning, R 4.

2nd prize, $1, Mrs. Ina Chatron, Armada, R 2.

I haven't received any letters on our question, "How Can a Woman be Contented With a Man who has Neglected to Develop his Social Nature and has no Time for Culture and Refinement? What Can She do to Get Him to Mingle With other People of Good Taste?" We are offering prizes for answers to it.

I have several very good questions sent in by readers which I am going to use from time to time in the future, so sisters you better get a new pen point and a bottle of ink because I feel sure you will all answer them.

Simple, Wholesome Meals

Threshing day is indeed a busy day for the farmer's wife, but it need not be the bugbear that it has usually been in years past. A simple wholesome meal well cooked and nicely served is far better than an elaborate meal of perhaps two kinds of meat, potatoes cooked in different ways and several different desserts.

One kind of meat, two of vegetables, and one dessert would usually be considered all that is necessary.

Let simplicity be the keynote then. At all times and especially in these days of high costs one wishes to make the most of what one has on hand and this will influence to a great extent just what each one will decide to have for the meal, so it is not possible to lay down any hard and fast rules. I have found however that there are many preparations that may be made in advance that are a great help in saving time and labor on the last day. If I wish to serve baked beans I have the required amount carefully looked over and put away so that they are all ready to wash and put to soak. A can of pickles (either beets or cucumbers) is prepared at some convenient time and these set aside in a handy place. As soon as I have ripe apples I can some apple sauce and put the cans away with the pickles. [illegible]oper that must be prepared [illegible]e and cake makes a simple dessert that is well liked by most everyone. Of course any kind of fruit would do as well, the main point is that if it is to be cooked to have it ready.

Then several days or a week before I make a fruit cake of the kind that keeps indefinitely, and cookies are made the day before the men are expected. If the men are to be with us several meals I find these preparations to be a positive necessity. If I decide that pie shall be the dessert for dinner it is either apple or mince as these kinds could be made late the day before. Such pies as berry or custard should be baked fresh just before the meal and of course leaving this work until the last is just what we must avoid. While I, myself, have never served baked apples and cream for dessert on threshing day I heard of one housewife who did so, and surely nothing could be more easily and quickly prepared than this delicious dish.

I intend that one of my vegetables this year shall be cabbage salad, and will prepare the dressing the day before. In fact one should leave nothing undone that could be done beforehand without making the meal or meals any less wholesome or appetizing.—*Mrs. W. E., Big Rapids, Mich.*

Meal That Would Tempt Anyone

Of course anyone knows about when to expect threshers so I make a large baking of bread and also of cake that will keep like molasses or apple sauce cake. I cook beans the night before and bake them for dinner. I plan to always make a large rice pudding and never dish it in small dishes as that makes so many to wash. Peel potatoes in the morning, bake beans and pudding, set the table for all if you have to borrow dishes, have pie that is made the day before if possible. I always buy cookies as farmers get just as hungry for baker's goods as city folks do for home goods. I have a large pan that just fits my oven that I use to fry meat, then you don't have to turn it and it is better flavored. I do not always have roasts as the men always say when they get to my house I will get some fried meat today and they get awfully tired of roasts and stews and brown gravy. I usually have green corn cooked in the boiler and on the ear so there is my dinner, potatoes, baked beans, rice pudding, friend bacon or fresh pork and gravy, pickles, corn or some other simple vegetable, pie, cookies and bread and butter and coffee, and I never have to hurry or fret and the dishes aren't much either. I always have about 15 to cook for dinner and never have any help. I always have enough left for supper as they nearly always go home. I add my cake and some sauce and there you are. Do not get the old foolish idea that threshers must have everything you can think of to eat and tire yourself and half of the neighbors trying to prepare it as it is just a foolish fad and not at all necessary.—*Mrs. E. G., Oceana County.*

Cooks Some Two Days Ahead

I will tell you how I do my cooking for threshers. Two days before I have threshers I fix my pickles, I bake a fruit cake, the next day I bake two kinds of pies and cake, I buy my cookies, I boil a large piece of beef the day before so as to have it sliced cold, I have chickens killed the day before and I fry it in butter for dinner. I buy all my bread so the day I have threshers all I have to do is to make a large dish of baked rice, cook potatoes and make the gravy and set the tables. I am the mother of eight small children and I never hire any help for thresh day and I am never rushed with work when threshers come. Hoping my letter will help some one of thresh day.—*Mrs. R. H., Montcalm County.*

Make Head and Feet Work Together

I am 50 years old and have lived in southern Michigan on a farm most of my life. Now it is easy to care for the threshers if one makes their head and feet work together. All I do is get everything ready I can the day before if I know when they are coming and we generally do. The first thing I see is that there is plenty of good wood and water, then I do my baking the day before, make bread pies and fried cakes or cookies. Then I cook beets and fix them for pickles also cucumbers or have them sliced as the case might be. I get my beef roast—either go to town or send for it. I put that in the roaster and in the oven the night before, if I can I roast it a little but it is all ready for morning. Whatever vegetable I want I get it picked the night before. I try and sweep and dust and everything I can do to save work on the day I have the threshers. Now all there is to do on thresh day is to cook and set table and wash dishes. I can easily care for 20 threshers now and all alone. Just make youh head, hands and feet work together, that's the secret.—*Mrs. A. J. V., Gaylord, Mich.*

Has More Than Enough Food

As you wanted to know how I made threshing day work lighter, I thought I would take time to tell you we threshed a few days ago. I had cold roast beef, brown gravy, potatoes, green peas, pickled beets and pickled string beans, pumpkin pie, preserved plums for sauce, graham cookies, cakes baked in gem tins, bread, butter and tea. Friend Husband came in one day saying, "the threshers are coming to the neighbor's tomorrow and I expect they will be here next," so I set bread and the next day I made cookies and cakes as well as bread. I put dried pumpkin to soak and had my pie crust ready so as to bake my pies with my breakfast fire. When husband came home he said they would not get here until the next day unless it rained as another neighbor wanted to thresh first as his grain was in the field and ours was in the barn, so that gave me more time and I went to the garden and got some beets and peas. I got the peas ready to cook in the morning while I was roasting the meat. A boy dug the potatoes and helped me get the extension table ready, then poured the water just before the man came in I put the soap and water and towels out of doors for the men to wash. As it was Saturday we had 14 for supper and enough left over for our Sunday dinner. I had no one to help me only callers Friday evening helped me shell the peas.—*Sister Marie, Kingston, Mich.*

Short of Room

I don't know as mine is any easier than others, but there might be a suggestion for some young farmer's wife who is new to the game.

If they have just one room that must take the place of dining room and kitchen combined they may appreciate a way to have the room cool for the threshers on a hot day, for surely they have to sweat enough outdoors in the hot sun, without coming into a warm, hot room and nearly melt while they are eating. If there had been a cool, shady place out doors, I would have set my table out doors, but I didn't have any, so had to have it in the house. As it happened, I didn't have mine for dinner, but for an early supper. So the day before I looked over my navy beans, they always like baked beans and pared my apples for pies and baked my bread. Then the next morning I made my pies, cakes and got my vegetables ready. I made escalloped potatoes and a larger pan of salmon loaf, and steeped my tea for cold tea. Then when I had my baking all done, I let my fire go out as I didn't have an oil stove, so that my room would be nice and cool. And as I didn't have enough chairs to go all the way around, I put two chairs on each side of the table and put long boards on them. They can cover they with blankets if they desire to. They will drink large quantities of cold tea, and as I had 23 men for supper, it took two large milk pails full to satisfy them. I put my tub of water on the back porch, my soap and towels, and hung my mirror and combs up against the house so they could splash to their hear't content. I put two wash dishes on the porch, so they could dip into the tub, to get their water, as my pump is quite a way from the house. They seemed to enjoy their supper and as it was cool, they were a jolly bunch of men. I put everything on the table so all I had to do was to fill their glasses with cold tea. I had for supper escalloped potatoes, baked beans, sliced cucumbers, salmon loaf and these dishes I set on the table, just as I had baked them, for they looked far more attractive and saved washing so many dishes. I had plenty of bread and butter and apple pies and cakes, so they would had all they wanted, and as I had the crew for breakfast there was plenty left over and it was a short matter for me to get breakfast for them.—*Mrs. S., Paw Paw, Mich.*

Co-operation

The threshing time is no more of a dread to me. The farmers in my neighborhood, my husband included, have co-operated and brought a grain separator, not a great large one but one large enough to do satisfactory work and is run by a tractor. There are three tractors among the six farmers that co-operated and the tractor is used that is the handiest to the one that comes next. The farmers of course help each other by sending a team and wagon and the grain is drawn from the field to the threshing machine. Therefore I only have five or six extra men besides my husband and hired man, and if I have bread on hand as I always try to have, the pies and cakes and cookies or whatever I want are soon baked in a good range. I always do my baking the first thing in the morning and I plan for both dinner and supper in my forenoon's work. To give my menu would be impossible as I have a good hearty meal, such as potatoes, bread, butter, baked beans, cabbage, cookies, pie, some kind of pickles, meat, with thickened gravy, and tea or coffee, and for supper I have cake and cookies or two kinds of cake, escalloped or warmed up potatoes, salad and sauce, eggs or salmon or cold meat, and of course bread and but-

The Makin' of Friends

By Edgar A. Guest

If nobody smiled and nobody cheered
and nobody helped us along,
If each every minute looked after himself and the good things all went to the strong,
If nobody cared just a little for you, and nobody thought about me,
And we stood all alone to the battle of life what a dreary old world it would be!

If there weren't such a thing as a flag in the sky as a symbol of comradeship here,
If we lived as the animals live in the woods, with nothing held sacred or dear,
And selfishness ruled us from birth to the end and never a neighbor had we
And never we gave to another in need what a dreary old world it would be!

Oh if we were rich as the richest on earth and strong as the strongest that lives,
Yet never we knew the delight and the charm of the smile which the other man gives,
If kindness were never a part of ourselves, though we owned all the land we could see
And friendship meant nothing at all to us here, what a dreary old world it would be.

Life is sweet just because of the friends we have made and the things which in common we share,
We want to live on not because of ourselves, but because of the people who care,
It's giving and doing for somebody else, on that all life's splendor depends,
And the joy of this world when you've summed it all up is found in the makin' of friends.

—from the Detroit Free Press.

ter and coffee. We nearly always have a good garden so of course my menu varies.

Now this co-operation is a great help both to the farmer and his wife no planning on going after coal, and then you can thresh just about when you are ready. Therefore time and labor are saved by both Mr. and Mrs. Farmer. We have 90 acres and we have quite a large threshing and its quite a help to me. As I have to do my work alone and there is a good many steps to take getting a meal. Trusting more farmers will co-operate.—*Mrs. W. B., Owosso, Mich.*

A New Reader

We are just new subscribers to the M. B. F. and like it very much but being a woman naturally would like a larger page for the women. Seeing requests for letters on making threshing day work lighter, as I have had lots of that work to do, will send this letter for a beginner.

We all know within a week just about when we will have the threshers, therefore I always make plenty of bread not only one baking, but two or three, have plenty of cookies and some cheap (but good) fruit cake, all of these will keep. Then I have my husband set up a table and benches out of lumber large enough to seat them all at once. If I am having them for more than one meal, I cover it with white oilcloth, which saves washing tablecloths. I make small bags out of cotton, usually small salt bags and fill with coffee and sew up, then when I want to make the coffee I just put one or two into the tea kettle and make my coffee. I never try to bake in the forenoon, as I leave my oven for roasting the meat and the time for preparing the vegetables. I always manage to have my meat cut up, the gravy made, and the vegetables in the dishes when the whistle blows as we know they always come in with a rush. When everything is on the table when they come in there is no confusion. I always cut enough bread and pies the first time and there is always some left. I have my little girl stand by the table to see if anything is wanted. Having the coffee made in the kettle it pours much faster and no grounds to interfere. After dinner I always have plenty of hot water and towels and as I wash the dishes I place them on the table again and my table is all set for supper. I always put pickles, butter and sugar in covered dishes and can be left right on. Then if I want to bake I have the afternoon to do so without interfering with the meat. I used to live where we had 20 and 25 threshers for two days or more, and when one depends on borrowed help most of them cannot get away until nearly noon, then there is so much to talk about, that, as a rule, the meals are always late and the vegetables only half cooked and that "gets on my nerves" as I like well cooked and neatly served meals, even if they are only threshers. Some people always dread threshing time, but I must say I never did. I rather enjoyed all the neighbors in at once. I have 5 small children. But I find when your work and meals are well planned it is half the work, but when we had them for more than one day I will admit I was tired but well satisfied and the men were too.—*Mrs. F. B., Curran, Mich.*

Takes Care of Threshers Alone at Age of 62

I saw in the M. B. F. that you would like us to tell how to make the work easy on threshing day. Well, I am an old lady most 62 years old, and I have taken care of threshers all alone. I heard the threshers say they would like some salt meat some time when they were threshing; they get tired of fresh meat, and I heard them say they would rather eat off an oil cloth or a colored table cloth. Well, their clothes are dusty and they don't like to soil a white table cloth. Well, when we expect threshers I think over what we will have for them to eat. I fix the pickles a few days before I expect them, then I make some big, fat cream cookies, then I make a fruit cake (can make these three or four days before they come), then I get a picnic ham and boil it, and the day before they come to thresh put it away in a cool place, and I get some fresh frankfurters and put them thru the meat grinder and put them in a kettle with some water and season with pepper and salt and stir up a little flour and make a nice gravy. The men seem to enjoy it all so much. If I cook beans I get them all ready the night before, and I wash them and put a lump of soda in the kettle as large as a big bean. The first thing in the morning, while I am getting breakfast I put them on to cook. If I use garden vegetables I get them up to the house the day before so everything will be handy. I bake my pies the day before. The meat will keep for four or five days if it is kept in a cool place. If something happens to delay the threshers all this food will keep.—*Mrs. C. E. D., Bay County.*

Threshers Uncertain

Thought I would write and tell you how I make my threshing day work lighter. In the first place the threshers are about as uncertain as the weather and one does not want to go and cook up a lot and then not have them come. I usually know a day or so before hand something about when to look for them so I have water ready also bread and one or two kinds of cookies and one can make a dark cake that will keep good if kept cool. Have corn or whatever vegetables you are going to have gathered the night before and also one can have pumpkin cooked and put through the colander and can make pies the first thing in the morning. When one is going to serve chicken they usually have to be prepared the same day but farmers do not serve chicken as much as they used to. I sometimes serve salmon fixed with rice or some other way and a dinner with out meat is not an unusual thing. Macaroni and tomatoes can be prepared in a very short time. I usually have white and brown bread. It is not so much how much of a variety you have as to have plenty is the main thing. One of the main things I plan on having is beans either just plain cooked or baked. Hope this will help some one a little.—Mrs. B. B., Williamsburg, Mich.

"HEARTS OF THREE"

(*Continued from page* 11)

er of the bushes. The Jefe and Torres, who alone stood on their feet and breathed, cast their eyes up the cliff to where the smoke still issued from the new-made hole, and saw Henry Morgan and the Queen step into the sunshine on the lip of the cliff.

"You take the lady," the Jefe snarled. "I shall get the Gringo Morgan if it's the last act of what seems a life that isn't going to be much longer."

Both lifted their rifles and fired. Torres, never much of shot, sent his bullet fairly centered into the Queen's breast. But the Jefe, master marksman and possessor of many medals, made a clean miss of his target. The next instant, a bullet from Henry's rifle struck his wrist and traveled up the forearm to the elbow, whence it escaped and passed on. And as his rifle clattered to the ground he knew that never again would that right arm, its bone pulped from wrist to elbow, have use for a rifle.

But Henry was not shooting well. Just emerged from twenty-four hours of darkness in the cave, not at once could his eyes adjust themselves to the dazzle of the sun. His first shot had been lucky. His succeeding shots merely struck in the immediate neighborhood of the Jefe and Torres as they turned and fled madly for the brush.

Ten minutes later, the wounded Jefe in the lead, Torres saw a woman of the Lost Souls spring out from behind a tree and brain him with a huge stone wielded in both her hands. Torres shot her first, then crossed himself with horror, and stumbled on. From behind arose distant calls of Henry and the Solano brotners in pursuit, and he remembered the vision of his end he had glimpsed but refused to see in the Mirror of the World and wondered if this end was near upon him. Yet it had not resembled this place of trees and ferns and jungle. From the glimpse he remembered nothing of vegitation, only solid rock and blazing sun and bones of animals. Hope sprang up afresh at the thought. Perhaps that end was not for this day, maybe not for this year.

Emerging from the jungle, he came upon a queer ridge of what looked like long disentegrated lava rock. Here he left no trail, and he proceeded carefully on beyond it through further jungle, believing once again in his star that would enable him to elude pursuit. His plan of escape took shape. He would find a safe hiding place until after dark. Then he would circle back to the lake and the whirl of waters. That gained, nothing and nobody could stop him. He had but to leap in. The subterranean journey had no terrors for him because he had done it before. And in his fancy he saw once more the pleasant picture of the Gualaca River flashing under the open sky on its way to the sea. Besides did he not carry with him the two great emeralds and two great rubies that had been the eyes of Chia and Hzatzl? Fortune enough, and vast good fortune, were they for any man. What if he had failed by the Maya Treasure to become the richest man in the world.

(*Continued next week*)

THE SIGN OF ROWENA QUALITY

Lily White

"The Flour the Best Cooks Use"

Is Guaranteed to Please

Three generations of Michigan women have used our flour with success for all the requirements of home baking. In all these years we have guaranteed it to be not only a good flour but the **best** they ever used.

We back LILY WHITE without reservation.
It is a flour milled from choicest selection of soft and hard wheat grown in America. The soft wheat improves the flavor and color. It insures the baking of a good looking loaf of bread. The flour is correctly balanced to make as good bread as it does biscuits and pastry. There is just enough hard wheat in LILY WHITE to make it the ideal all-around flour.

Look for the ROWENA trade-mark on the sack

After being cleaned four times it is scoured three times, then actually washed, so that every bit of dirt is removed from the kernels of wheat..

Everything baked from LILY WHITE,an all-around flour, has It has absolute uniformity of granulation, superfine texture and color.

unexcelled flavor, is light, tender, good looking, delicious tasting.

Make your next sack of flour LILY WHITE—and remember our guarantee that it must give you complete satisfaction.

Ask for it at your dealer's.

VALLEY CITY MILLING CO.

"Millers for Sixty Years"

The Children's Hour

DEAR CHILDREN: Well, well, here we have a whole page all by ourselves. A good share of the time during the past three or four months we have had to squeeze our department down to a half page but from now on we will have a whole page most of the time. Isn't that good news? Now we can have a story every week and have a puzzle and publish lots more letters.

One of my little nieces asks if we every publish drawings that do not win a prize. Indeed we do not, Arlone. It was a mistake that your name was not put in the paper as a prize winner and you did not receive a prize. I will send you something. I won't tell you what it is, I'll just surprise you.

How many of you are going to the State Fair, which opened yesterday at Detroit? A great many of you will and have a big time, but many others live too far away or their parents haven't the money to spare. I am going and I know I am going to have a wonderful time. I wish you all could come and bring a basket of lunch, and meet me there. Then we would eat our lunch together under some trees and after that go and see the different things. As some of you cannot go I will tell you about it after the fair is over. All of you will go to some county fair and I won't be able to go to them so I wish you would write and tell me about the one you went to. Will

Affectionately yours—AUNT ..E.

OUR BOYS AND GIRLS

Dear Aunt Clare—Please jump over and give me a little room. I am a girl 15 years old and have blue eyes and dark brown hair. I am going to school the last of this month and will take up 8th grade work, then next year I am going to Ferris Institute at Big Rapids to study to be a school teacher or a bookkeeper. How many of you children like to go to school? I think every child should go as far in school as they can and then begin again. I will close and write a story I would like to hear from some of the boys and girls too.

The Bear

The bear is a large, heavy looking beast with a thick coat of long, soft, shaggy hair. He is very strong and clumsy, but can swim and climb trees with ease and skill. Bears are brown, black or white. The white or polar bear lives in the far cold north where the ground is covered with snow and the sea with ice. Even in June and July. Bruin's thick fur coat keeps him warm and the sharp air gives him a good appetite so he is at home where the other bears would die of cold and hunger. He can swim as well as walk, he can float like a duck or dive like a fish, his feet never slip on smooth ice; they are covered with hair. He sometimes finds seals asleep on ice or dashes after one into the water. He catches fish, swift as they are. Whales serve him as food also berries and seaweeds. Bears never attack a man if they can help it, but when angry they are very fierce, rising on their hind legs they hug their victim with their forepaws. Bears are in many ways useful to man. Many articles of dress are made from the skins and fur. The flesh is good for food and the fat is used instead of oil.—Una Farrell, Blanchard, Mich.

Dear Aunt Clare—This is the first I have written to you. I am a girl 14 years old and in the seventh grade at school. My teacher's name is Mr. Swan. We take the M. B. F. and I like it very much. I have three brothers and five sisters besides myself. We live in a farm of 20 acres. We have 4 horses, 3 cows, 6 pigs, 3 ducks and 50 chickens. We have 16 acres of beets planted this year. We also have a Ford truck. My father went picking thimble berries Saturday. For pets I have a cat and a dog. As my letter is getting long will close, hoping to see my letter in print. Mamie Tacey. Bay City, R 2.

Dear Aunt Clare—I am a girl 11 years old. I will be in the seventh grade when school starts. I have 2 sisters and one brother. We have a little dog. I have written before. I live on a 120 acre farm. My father takes the M. B. F and likes it very much. My teacher next year will be Leta Austin. I will be glad when school starts. I wish some one would write to me. I will close, hoping to see my letter in print. Edith McVeigh, Ithaca, Mich., R 1.

Dear Aunt Clare—I am a little girl 8 years old and have been sick since February but am lots better now. I am going to have my tonsils out this month. I get so lonesome staying at home. I wish some one would write to me. I would love to hear from them and would answer every one I get. For pets we [illegible] and 2 doves. My papa takes the M. B. F. and likes it fine. I will close hoping to hear from some little boy or girl soon. Aurdey McVeigh, Ithaca, Mich., R 7.

Dear Aunt Clare—This is the first I have written to you. My father takes the M. B. F. and likes it fine. I like the Children's page the best. I have three brothers and no sisters. I am a girl 15 years of age. For pets we have a pup and three rabbits. We live on an eighty acre farm. As my letter is getting long I will close, hoping that my letter will escape the waste paper basket. Alice Davis. Beaverton. Mich.

Dear Aunt Clare—This is the first I have written to you. I am a girl 12 years old and in the sixth grade at school. I like to go to school. My father takes the M. B. F. and I always read the childrens page. For pets I have one kitten named Tobby. I hope this escapes the waste basket and will close with a picture. Margaret Fitzsimmons, Fremont Mich.

Hunting Eye Meets a Smuggler

Francis Rolt-Wheeler

LEAVING the Light house keeper on watch at his post, Hunting Eye climbed down the hundreds of steps and started to walk back to the Coast Guard station, where he was to spend the night. It was already getting dark, when he heard a low whistle some distance behind him. Stooping down and hiding he saw a man come out from the sand dunes with a lantern. This he waved in circles, and, soon after, a boat pulled on shore. A couple of men leaped out and began carrying some small boxes and kegs.

They seemed so nervous that Hunting Eye felt something was wrong, and he hurried to the Coast-Guard station and told his friends.

"Smugglers, eh!" said the Captain. "We'll attend to 'em!"

As the crew hurried along the beach a flanking party going out through the dunes to trap the smugglers in the rear, the Captain explained to Hunting Eye in simple fashion what smuggling meant.

"In some countries, where the working people are paid less than here, goods can be made cheaper than here. If we let ships bring those goods here, free, that would hurt American workers. So the government puts a tax on these goods, so that they will cost about the same price as goods made here. That's fair to the people who work here, and at the same time, it gives the government some of the money which it needs for running the country. Some things which are luxuries— like jewels — are taxed heavily. So, if people can succeed in bringing those goods in secretly, without the government knowing, and in this way they escape the tax. In that way they can sell the goods cheaply and still make a big profit."

"But then they cheat their own government," said Hunting Eye. "That is very wrong. One does not hurt one's own tribe of people."

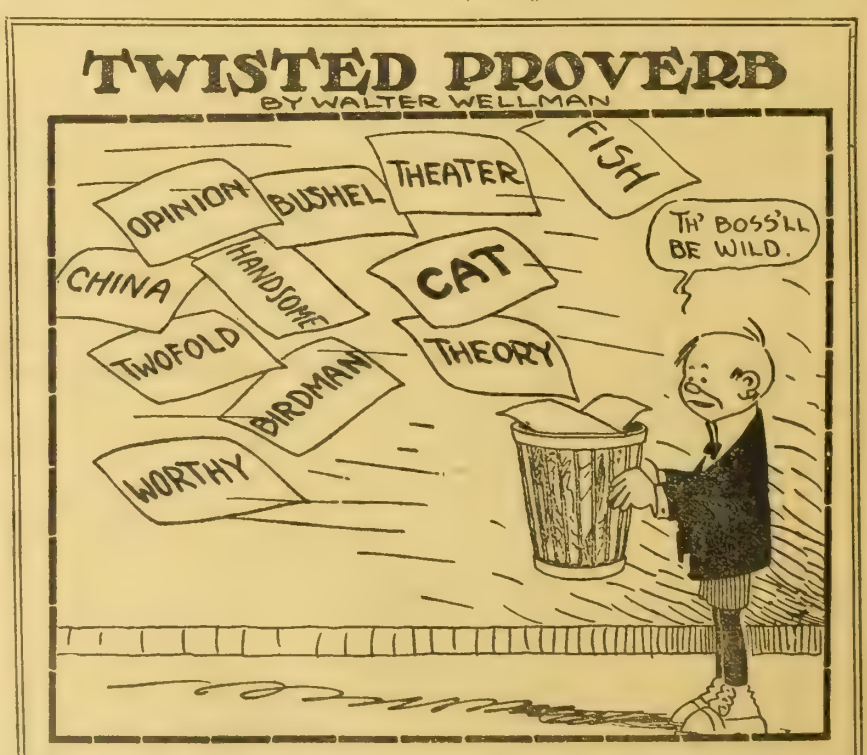
"You bet it's wrong," said the Captain of the Coast Guards. And, warning Hunting Eye to keep silence, the crew stole upon the smugglers unobserved and caught them, red-handed, with the goods.

"I guess that they will not cheat the tribe this time," said Hunting Eye.

Dear Aunt Clare—I am sending a drawing of an old cat with a kitten in her mouth. I have named the cat in the picture Tess and the kitten Tippy, because I made a white tip on his tail. I am twelve years old and I passed the seventh and eighth grades last year and will be in the ninth this year. I am taking violin lessons now. Hoping to see my drawing in print I will close. Grace Iornwell, Carland, Mich.

Dear Aunt Clare—I am twelve years of age and live on an 180 acre farm. For pets I have two lambs two rabbits and some bantam chickens. This is the first letter I have written to you. Hoping to see my letter in print. LaVada Drullinger, Decatur, Mich.

Dear Aunt Clare—This is the first I have written to you. I am a girl 7 years old. We have two horses and 4 cows, and I have 2 cats. I have two sisters and one brother. Hoping to see my letter in print. Mildred Darby, Pine River, Mich., R 3.



Bobbie, while emptying the boss' wastebasket, encounters a stiff breeze from one of the windows. The breeze blows eleven pieces of paper away. There is a word on each piece of paper. Each word contains a smaller word. The smaller words, in order, form a well known proverb.

Dear Aunt Clare—Will you admit one more to your merry circle? I have never written to the boys and girls page before but expect to more than once. I am 12 years old and am in the seventh grade. I live on a 200 acre farm. We have 5 horses 5 cows, 100 sheep and several pigs. I have 3 brothers and 2 sisters. Their names are Charles, Tom, Arthur, Nell and Joan. For pets I have a lamb and a cat. I enjoy the Children's page very much in fact, every one in the family finds interest in the pages of the M. B. F. If some of the boys and girls would write to me I would be glad to answer them. Don't you think that would be fun boys and girls? Let's start something like that, what do you say? I love to read the Doo Dads? Why can't they be published any more? Well as my letter is extra long I will close, wishing good luck to the M. B. F. and Aunt Clare, I remain as B-4. Hoping to see my letter in print. Mary Ellen Evans, Fenwick, Mich. R 1.

A little gas,
A little oil,
A little spark,
A little tin box and a board,
Put it together and you have a Ford.
—Mary Ellen Evans.

Dear Aunt Clare—This is the first I have written to you. I am a girl 13 years old and in the 6th grade. I have 6 brothers and two sisters besides myself. We have a Ford touring car. We have 3 horses and 2 cows. We take the M. B. F. and I like to read the childrens page. We have about 60 chickens, 3 rabbits. 3 cats. Our school started August 9th. As my letter is getting long I will close it in a riddle. Hope to see my letter in print. As round as an apple as deep as a cup and all the king's horse scan't pull it up. Ans.—Well. Mabel Jacobs, Bay City, R 2.

Dear Aunt Clare—This is the second time I have written to you. I am a girl 12 years old and will be in the 8th grade next term. We have three horses and five cows and seven calves. We are going to get a new silo this year. We own eighty acres of land. My father takes the Michigan Business Farmer and likes it fine. I wish some of the girls would write to me and I will be glad to answer them. I will close, hoping to see my letter in print. Stella Adolph, Yale. Mich. R 5.

Dear Aunt Clare—This is the first I have written to you. My brother takes the M. B. F. and likes it well. I have been reading the Children's' Hour and am interested in the boys and girls letters, so I thought I would write. I am a girl 11 years old and I raised a small garden. I live on a 120 acre farm and we have 3 horses, 3 cows and 7 calves, 2 sheep and 3 pigs. This letter is short but I will close, hoping to see my letter in print. Dorothy Stanton, Reed City, Mich., R 4.

Dear Aunt Clare—This is the first I have written to you. I am 6 years old. I haven't attended school but I am going to start this fall. I live on a farm. We have 7 cows and 3 horses and 5 calves. Papa takes the M. B. F. and I like to read the Children's Hour. I have been learning to write at home. When I grow up I would like to be a school teacher. I hope you have room in your Children's Hour for my letter. I will close and say good-bye. Helen Woodburn, Frederick, Mich.

Dear Aunt Clare—I have been reading the girls and boys letters and am very interested in the Children's Hour. I wrote once before but did not see my letter in print. I am a girl 11 years of age and in the sixth grade. For pets I have a dog named Buster. I have one sister and a brother at home. We have a Ford car. I will close so the others will have room for their letters. Theresa Lamb, Lake City, Mich. R 2.

Dear Aunt Clare—This is the first time I have written to you. I am a girl 11 years old and I am in the fifth grade. Papa takes the M. B. F. and likes it fine. I have 3 brothers and 2 sisters. I live on a 120 acre farm. We have five horses. 3 cows and 4 calves. For pets I have 2 rabbits. Creva McKeon. Pinconning, Mich. R 2.

Dear Aunt Clare—This is the first I have written to you. I am a boy ten years old. I will be in the sixth grade at school this fall. I live on a 50 acre farm. My father takes the M. B. F and likes it very much. I like to read the boys and girls' letters. I will close hoping to see my letter in print. Paul Mitchel. Olvet, Mich., R 2.

Dear Aunt Clare—I have written to you before but did not see my letter in print. I am ten years old and am in the fifth grade. I have three sisters and one brother. We have two pigs. I hope my letter will escape the waste basket. I will close. Garnet Darby, Pine River, Mich., R 3.

Dear Aunt Clare—I am a little boy nine years old. We live on a farm. We have 5 cows, 3 horses, 72 pigs, 45 chickens and I have a pet lamb. We like the M. B. F. very much. I am in the fifth grade at school. Verne Burkhart, Onaway, Mich.

Dear Aunt Clare—I wrote to you once before but did not see my letter in print. I am 10 years of age. I have 2 brothers, 1 sister. I like to read the Children's Hour. My father takes the M. B. [illegible] Branch, Mich.

CITY NEWSPAPER'S VIEW OF FARM BUREAU

(*Continued from page* 4)

Coalition Finances Bureau

"The Coalition Committee at first objected to giving any help to an organization of farmers, but they admitted that while they did not like the state farm bureau idea, as we outlined it, they liked the Non-Partisan League much less. The result was that a fund of $10,000 was put at our disposal, and of this sum about $6,000 was borrowed on notes. It was paid back in, I think, about three months. By that time we had funds of our own, derived from county memberships. About $75,000 came in from Oakland County in that way in a little more than a month."

One of the men at this meeting where the loan engineered by McKee was affected was the editor of THE MICHIGAN BUSINESS FARMER, a a periodical of direct action in agricultural matters. THE BUSINESS FARMER opposed the loan arrangement at the meeting and opposed it in the magazine. The argument was that the farmers had put themselves under obligations to an adverse interest, and the demand was that the loan be paid back as soon as possible. That it was paid back in a few weeks may have been due in part to the strident criticism aroused. There does not appear to be any question that THE BUSINESS FARMER voiced the sentiments of a large proportion of the farmers throughout the state.

With the approximate $6,000 loan from the Coalition Committee and another $8,000 raised among the farmers the leaders among the agriculturists organized the State Farm Bureau, elected Mr. Morrill president and A. T. Bingham, of Birmingham, secretary.

Bureau's Avowed Program

When the constitution and by-laws were adopted the purpose of the organization was announced to be the "buying and selling of merchandise, farm machinery, fertilizer, stock feeds, livestock or any other farm products whatsoever; operating storage warehouses; elevators, creameries, pickling, evaporating, dehydrating or otherwise converting or manufacturing farm fruits, grains, vegetables or other farm products; securing better results in grading, packing, marketing and advertising the products of members; renting, buying, building, owning, selling and controlling such buildings, equipment or other real and personal property as may be deemed necessary in the conduct of the affairs of this association."

Probably more significant than the bureau's declaration of policies, which, like all such declarations, necessarily accommodate themeslves to circumstances and prevailing opinion among the membership, is the fiancial arrangement made by the state bureau to supplant the old system of payment of county agent salaries. The salaries are now paid half by apportionment from the Smith-Lever Fund, as of old, but the other half is no longer paid by the county boards of supervisors. The farm bureaus pay. The 50 per cent portion of the salary comes out of the membership fees.

Counties No Longer Pay

In short, the agricultural county agents, who are also business agents of the farmers, are now being paid by the people they are working for instead of by all citizens with the tax money of citizens. There are evidences that both the general run of citizens and the farmer-citizens themselves wanted the matter arranged this way. When the agricultural agents became business agents, promoting direct dealings between producers and consumers, and direct dealing between farmers and supply houses, they began a policy which obviously, if carried out, will put a lot of middlemen out of business entirely. Now, these middlemen are taxpayers. The implement dealer in a small town can readily be assumed to have had a strong objection to seeing his supervisor voting tax money to pay a county agent for promoting a direct deal of farmers for agricultural implements.

"We recognize the fact that, if the county agents are to work for the farmers, the farmers should pay the shot," was remarked in the office of the State Farm Bureau, while this point was being discussed.

Political Activity Forbidden

The bureau is prosperous. Counties are rapidly being organized and the total membership exceeds 70,000 units, according to claims. And a unit, in this case, means more than a single member. The units of membership in the farm bureau are the farm household. One membership includes the farmer's wife and his grown sons and daughters, living on the farm.

In the total, the State Farm Bureau would be a powerful organization in state politics if it were to vote unitedly. But the constitution and by-laws of the organization declare against such partilipation in politics, indorsing candidates and promoting candidacies, however, is very well known.

KEEP BOYS ON FARM BY MAKING FARM LIFE ATTRACTIVE

(*Continued from page* 6)

living conditions. Unpleasant environment."

—and then the final paragraph (I think it's what the advertising man calls the "closer"—it's that little twist that's stuck at the end of an ad aimed to create desire and cause action—it's the thing that's supposed to make you loosen up and sign your name on the dotted line) and it reads like this:—

"—Farm life is a dog's life! We are up against it! Losing money—almost bankrupt! Why don't you join us?"

Compare this with other want ads —compare it with the want-ads of the motor car factory, the steel mill or any other industry and you will get a dazzling contrast—a contrast that effectively answers the questions:

"Why is the farmer short of labor? Why does the farmer boy move to town?"

RELIABLE FIRM OFFERS PRIZE IN 'BETTER SIRES' CAMPAIGN

Most of the farmers in Michigan are familiar, no doubt with the "Better Sires—Better Stock" movement originated by the Bureau of Animal Industry of the United States Department of Agriculture, but few, we believe, know that the Chapin and Company of Chicago, Illinois, a well known and reputable company engaged in the manufacturing of mixed feeds, is offering $1,000 in prize money to help create a greater interest in this campaign.

Under rules and conditions provided by the Bureau of Animal Industry this company will pay a prize money of $1,000 to that county in the United States which first becomes free from inferior sires. The word "sires" includes stallions, bulls, jacks, rams, boars and bucks, but not poultry.

A county eligible to receive the prize must have a total of 500 or more sires of all classes and 5,000 or more head of female breeding stock.

All owners of males kept for breeding purposes in the classes mentioned, and a majority of other livestock owners in the county must have declared their intention of hereafter using nothing but purebred sires by joining the "Better Sires—Better Stock" campaign of the Bureau of Animal Industry.

Upon notification by a County Agent or the officer of a county livestock organization, that the county he represents is free from inferior sires, the Bureau of Animal Industry will investigate the claim. If the Federal expert finds that the county is, in fact, free from inferior sires, the Chief of the Bureau of Animal Industry will declare that county as winner of the prize.

The prize money will be deposited in a local bank to the credit of the County Agent, official of the county livestock organization or other person or persons considered best qualified to administer the fund. It will be maintained as a revolving fund from which loans may be made to persons desiring to purchase purebred sires in any of the classes mentioned. After three years from date of the award, the fund, with accumulated interest, will be distributed in five equal prizes, in open competion, for the most meritorious young stock resulting from the use of purebred sires. One prize for horses, beef cattle, dairy cattle, sheep and swine.

County agents or officials of county livestock organizations desiring to enter their counties as competitors for this prize will indicate their intention of so doing by letter to Chapin & Company, sending a duplicate of the letter to the Chief of Bureau of Animal Industry, United States Department of Agriculture, Washington, D. C.

No time limit is placed on the offer of this prize. No other rules govern the competition except those herewith provided by the Bureau of Animal Industry.

In addition to the money prize, the county that is declared winner will be presented with a silk banner and a certificate signed by Secretary of Agriculture E. T. Meredith and Dr. John R. Mohler, Chief of the Bureau of Animal Industry.

DOUBLES MILK AND FAT YIELD

The milk production of heifers out of ordinary cows and sired by Holstein, Jersey and Guernsey bulls increased over that of their dams by 64 per cent. The fat production increased 52 per cent.

The second generation increased in milk production over the original cows 130 per cent; in fat production, 109 per cent.—*Agricultural Extension Service, North Carolina.*

Cellar is Just Right

With this perfect furnace, your cellar never freezes and it never gets hot. Perfect storage of vegetables, fruits and foodstuffs is the result.

Viewed from any point, you cannot lose when you add to your home the

COZY The Perfect PIPELESS FURNACE

Your protection is the most sweeping guarantee of satisfaction ever made, backed by thousands of commendations from satisfied users who have found this furnace comfortable, convenient and economical—all a furnace should be.

Fills your home from its single register with balmy, healthful heat, circulating to every corner. Requires little attention; regulated from the living rooms, and wonderfully economical. Costs less to operate than two or three stoves.

Can be installed in any house, old or new, in a day's time. Let the dealer show you, or write to us for our informing book "The Last Word in Economical Heating," sent free on request.

Farmers Service Bureau

(A Clearing Department for farmers' every day troubles. Prompt, careful attention given to all complaints or requests for information addressed to this department. We are here to serve you. All inquiries must be accompanied by full name and address. Name not used if requested.)

CLEAR TITLE

Six months ago I purchased 40 acres. The abstract showed that there was a flaw in the title but the parties said they could get a clear title so I paid the cash, all excepting $250 which was placed in the bank as forfeit money. They signed a contract that they would give a clear deed within six months, but they failed to do so; in fact, they did not have a deed to part of the land in question. The time of the contract is up and they do not want to give up the forfeit money, but they have not produced a clear title. How shall I go about it to get my money?—J. P. H., Vicksburg, Mich.

Yours is a case where you need local counsel. In a general way the right to the money deposited with the banker will depend upon the terms of agreement made and stated to the banker. If it was agreed and so stated to the banker that you were to have back the $250 if the title was not perfected in six months then you should have it back but if the money was left as a guaranty against any damage to you I would be of the opinion that you must establish your damage in court. If it was fixed definitely at $250 and agreed you were to have the money back and the banker is afraid to pay it to you as both you and the other man claim it then he can file bill of interpleader, place the money in court and let the judge decide to whom the money belongs.—*W. E. Brown, legal editor.*

FERTILIZER FOR SEED

Would a fertilizer composed of 2 per cent Ammonia, 10 per cent of phosphoric acid and 4 per cent of potash do for beans on sandy soil? If not, what should be used? Would the results be the same to apply this fall or wait until spring at planting time?—N. R. C., Lake, Mich.

It is not advisable to apply mixed fertilizers to the soil in the au- for spring crops. The best apply them is when the crops eded. It is not advisable to apply the mixed fertilizers in a hill with the beans inasmuch as several reports have come to us which indicate that germination may be delayed somewhat. It is better to fertilize the entire surface layer of soil either with a fertilizer drill or by broadcasting it and working it in when the seed bed is prepared. The fertilizer drill however as a general rule gives most satisfactory results.

I do not advise the use of fertilizer containing ammonia on beans inasmuch as the bean crop is one which will derive its nitrogen or ammonia from the soil air provided the seed are inoculated with proper germs before being planted.

A general fertilizer for light sandy lands would be one consisting of 200 pounds of 16 per cent acid phosphate and about 20 pounds of potash per acre. These could be mixed and applied or if one does not care to follow this method he could purchase a fertilizer containing 10 per cent or 12 per cent phosphoric acid and about 4 per cent of potash.—*M. M. McCool, Prof. of Soils, M. A. C.*

FORCE VILLAGE TO FURNISH FIRE PROTECTION

I am a taxpayer in the village of Farwell, pay taxes on the upkeep of the water system or stand pipe and I have no fire protection. Can I force village to give me fire protection? What would be the necessary steps?—A Subscriber, Farwell Mich.

I am of the opinion that the village authorities would have control over the extensions of water mains and placing of hydrants. I think they would be obliged to permit connections if within a reasonable distance. I would think it very doubtful about being able to force a village to furnish you fire protection in the way of water pipes and hydrants.—*W. E. Brown, legal editor.*

WIRE-WORMS

I have a piece of meadow that I wish to put a crop on next year, but there are a lot of pin and wire-worms in it now. How can I get rid of them? This land is sandy loam with clay bottom and has been a meadow for 3 years. How is the best way to work it?—W. L. W., Cedar Springs, Mich.

It requires three years for wireworms to complete their life cycle and any measure of control means follow up for a term of years. The adult is a beetle, it prefers grass sod for egg laying but dislikes both clover and buckwheat. Therefore, infested sod land should be planted to clover (not clover and timothy) and buckwheat should be introduced into the rotation as often as possible, till the worms are starved out.

The ravages of the larvae are most noticeable three years after the land has been in sod because they are full grown at that time. Land infested with wire-worms should not be planted to corn or potatoes since they are very destructive to both crops.

Dr. Frobes proposes a rotation in which clover shall always follow sod and corn will follow the clover.—*Eugenia McDaniel, Research Specialist in Entomology, M. A. C.*

MORE ABOUT JOINT DEED

I would like to have you answer these two questions. First, if a husband and wife held a joint deed on a farm, or on any other real estate in this state and the husband died without making a will or testament would his wife be the sole owner of the jointly held real estate and could she will and dispose of it as she saw fit without going through Probate Court and could the husband do the same if his wife died? Second, how must I proceed to get a joint deed as all the land I own is deeded to me alone.—A Subscriber, Minden City, Mich.

Real estate deed to a husband and wife by the same instrument creates a joint deed. Upon the death of either, the survivor takes the entire estate without probate and free from the debts of the deceased; and may be deed, mortgaged or leased as the sole property of the survivor. To create this estate it is the usual custom for the person owning the real estate to deed to a third person and this third person, and his wife, if married, or alone, if single, and so state in the deed, to the man and his wife, naming them each by their own name, and call them in the deed "husband and wife." No other designation is necessary. Use wording as follows in naming them: "John Jones and Mary Jones, husband and wife, of (Mt. Clemens) giving their actual names in full and the actual place of residence.—*W. E. Brown, legal editor.*

CO-OP. ELEVATORS

Will you kindly advise through the Michigan Business Farmer about how many farmers and Co-Operative Elevators there are in this state. Are they all members of the Farm Bureau and can you advance any good reason why they are not all members. You are doing a good work, keep it up. Why can't a Roman Catholic be President, or can he?—X. Y. Z., Bay City Mich.

According to our Markets Department the exact number of co-operative elevators in Michigan is not available because of the fact that new ones are being formed rapidly. The office estimates that there are between 150 and 200 strictly co-operative elevators in existence at present. Seventy-six elevators were represented with official delegates at the meeting held for the purpose of organizing a state elevator exchange.—*R. J. Baldwin, Extension Director, M. A. C.*

There is no word in the constitution of the United States against a Catholic becoming president.—*Associate editor.*

INFRINGING UPON PATENT

I was granted a U. S. patent on an invention of mine and I find that several manufacturers are installing and selling the principles covered by my patent on their machines. Have they the right to do this without paying me royalty? If I am entitled to royalty what is the best method of procedure to collect same?—B. A. P., Antrim County.

One who infringes upon a patented article or appliance is liable in damages. You should consult a patent attorney to see if the use complained of is an infringement of your patent.—*W. E. Brown, legal editor.*

WATER WAY

I had some trouble with one of my neighbors in regard to a water course. Would like some information in regard to same if you please. This is an old water course and has been as long as we can date back. It contains about 150 acres of land, of which I own 40 acres, the rest joins me on the north and west and my neighbor to the south has 40 acres through which this water must flow. Now my neighbor comes along and fills in part of this ditch next to the line fence and holds the water back on my land and also joining my neighbor on the west. Now what can I do to make him open this ditch so as to take off the water?—P. N. Z., Oberlin, Mich.

One has no right to stop a natural water course to change the flow of water from its natural run. If your neighbor does so and backs the water on to you he is liable for all of the damage caused thereby.—*W. E. Brown, legal editor.*

POTATO SEED

Would you please tell me how to plant potato seeds? I have found several seed bulbs but the seeds are so small that it must take extra care to make them grow. C. B., Muir, Mich.

This seed should be allowed to thoroughly mature on the vine and then be removed from the seed ball very carefully. It should be kept in a dry form until spring when it should be planted about the same as a person would plant tomatoes to start small plants. It may be sown in a greenhouse, hot bed or late in the season open.

The soil should be very loose sandy type which will not bake easily. Plants should be planted very shallow and kept in such a condition that the moisture will remain in the soil close to the surface. The plants can be transplanted after they have grown large enough to handle to a garden like soil. The first year the potatoes which will develop will be very small. It takes as a rule three years before the potatoes have grown large enough for any value. There will probably be about as many different varieties as the hills planted as a rule a very small percentage of the hills will be either inferior or no better than the standard crops now being grown. It takes a great deal of patience and perseverance to wing out in the growing of potatoes in this manner.—*C. W. Waid, Extension Specialist, M. A. C.*

SOLD UNCLEAN SEED

I bought 35 qts. of clover seed last fall, sowed it and got nothing but mustard. I told the man I bought it of I wanted him to come and see it for I wanted to plow it up before it went to seed and he told me to go ahead and plow it up and he would see what he could od about it but now he don't seem to want to make it right.—G. B., Pellston, Mich.

If you saved a sample of the seed to help prove that it was mustard seed and you are able to convince a court and jury that it was mustard seed that he sold you he would not only be liable for the money paid but also for the damage he caused you by the imposition.—*W. E. Brown, legal editor.*

FORMING CO-OP. COAL YARDS

Would like to know how we could start a co-operative coal yard here in Pewamo. Quite a number of farmers are interested in it.—A Subscriber, Pewamo, Mich.

A co-operative coal yard may be formed by an association of individuals or by organizing a corporation. The corporation may be under the general corporation act or under the co-operative act. A partnership is formed by a partnership agreement drawn up by a competent person. A corporation is formed by the incorporators signing articles of association, adopting by-laws and electing officers. Corporation papers must be filed as directed by the law.—*W. E. Brown, legal editor.*

ANIMAL KILLED BY THIRD RAIL

If an animal that is insured against fire and lightning is killed by the electricity from the third or power rail of an electric railway, can damages be recovered from the insurance company?—I. F., Doster, Mich.

The insurance company would not be liable for death of live stock killed by a third rail electric shock. The R. R. Co. might have been so negligent in the construction or maintenance as to make them liable.—*W. E. Brown, legal editor.*

The Collection Box

ANOTHER PROMPT SETTLEMENT

We wish to apply to you for assistance. I think this account I am writing to you about has been hanging fire since January. Have written to Philipborn's of Chicago several times and in return receive an envelope filled with sheets containing questions. They owe me in all $7.97 for goods returned. The packages I returned were insured and I also sent them my cancelled check as they requested.—Christina Perry, Genesee county, July 18th.

Upon receipt of a letter from us Philipsborn's advised us the matter was being looked up, and a few days later we received the following:

I want to thank you for getting the money from Philipsborn's. Received check soon after I wrote you. Right here I want to say that your little paper is not alone for the farmer. I think our city friends would be greatly benefitted if they would take the time to read the many good articles found on its pages. The Farmer's Service Bureau, What the Neighbors Say, and Children's Hour pages are worth the price of the whole paper.—Christina Perry, Genessee County, July 30th.

GOODS SENT AND BALANCE OF MONEY DUE RETURNED

My boy ordered a Junior Yank uniform of the Junior Yanks Equipment Co., 144 South Wabash Ave., Chicago Ill.., and sent money order for $6 last December. We wrote them several letters and didn't hear from them until April, when they sent a bargain sale leaflet and said they couldn't send uniform. The boy ordered some things from that, the rest of the $6 to be sent in money and haven't heard from them since. He has written them one letter since April.—B. S., Silverwood, Mich. July 13

We referred the complain to the Junior Yank Co., and on August 16 we received the following:

I wrote to you a few days ago about some dealings my boy had with the J. Y. Equipment Co. On the 7th of August he received the shirt and trench cap and on the 12th a money order for the balance. He sent for the uniform last Dec. Many thanks to you for collecting this.—B. S., Silverwood. Mich., Aug. 13

PHILADELPHIA CO. SETTLES

I sent an order in March to the Warewell Co., of Philadelphia, Pa., for a skirt sent C. O. D. I received a skirt April 20th but finding it too small in a couple of days I sent it back and have not received any skirt or the money. Have wrote them four times. I paid $4 for the skirt with the C. O. D. collection. I surely hope you can help me.—Mrs. D. S., Fremont, Ind.

It appears whatever was the matter was discovered and adjusted because a few days after we wrote the Warewell Co. our subscribed received her money from them.

I wish to thank you in regard to the help you gave me. I have received a check from the Warewell Co. I sure am thankful for your help. If there are any charges please let me know and I will send it right away.—Mrs. D. S., Fremont, Ind.

There are no charges to paid-up subscribers for this service.—*Associate Editor.*

NEW YORK COMPANY SENDS SUBSCRIBER CHECK

On April 8th, 1920. I sent to Perry Dame & Company, New York, for a pair of oxfords, price $1.59. They sent a pair which I returned, asking them to send a gown price $1.49, in exchange. After waiting for some time I wrote them telling them I had not received the gown yet. They answered and asked me to send them the number and date of my money order receipt. I have not heard from them since.—Mrs. G. H., Bay City, Mich., Aug. 16th.

We laid our subscriber's complaint before Perry, Dame & Company with the request that they look the matter up. They did so and the investigation resulted as follows:

Received a check from Perry, Dame and Company for full amount and thank you very much for your help. I will try and put in a good word for The Michigan Business Farmer whenever I get a chance.—Mrs. G. H., Bay City, Mich., Aug 24th.

CHICAGO FIRM RETURNS $7.50

We ordered a rug last April from the Hartman Company, Chicago. They wrote they could not fill the order and I wrote them asking them to return our money but have not hear from them. The order amounted to $7.50.—E. R. H., Alpena Mich., July 30th.

That the company, upon receipt of our letter, looked this matter up and made a satisfactory settlement is shown by the letter we received on Aug. 25.

Received check for full amount from Hartman Company. Thank you very much.—E. R. H., Alpena, Mich.

What the Neighbors Say

(*Continued from page* 13)

other nations and most of them had the plunder in their possession when the war commenced. Since it stopped the allies have applied the American principle of self-determination to the countries that Germany & Co. held, but not to those held by the Allies. Now how is it that these very liberal nations do not take their own medicine. The facts are that self-determination offers a good way to weaken Germany and so make other nations safer without risking a quarrel in the allies camp over the division of the spoils. This may be good statesmanship, but it is not liberality. For hundreds of years it has been a favored doctrine in Europe that war and conquest was a great honor to the victor. Under such sentiments all the chance that the weakest nations had for themselves was in the jealousy of the big nations who were unwilling to see their rivals strengthened by absorbing the little fellows so that as long as the big fellows could not agree on a division of the little fellows they were permitted to go their own way. With an agreement the big fish would eat up the little ones. So that naturally all of the small nations were willing to do all they could to be safe and then most of the big nations rather keep what they had than risk losing it in an attempt to steal more so that pure selfishness led them to favor the league and so they too were ready to sign it.

Now let us look at the other part of the article from a sane standpoint. When the representatives of the "old thirteen" colonies came together to organize this country they were almost as much afraid that our own government would become dictatorial and oppress our own people as they were in English oppression, hence they did not give supreme authority to any one set of officers but divided it up, leaving part in the hands of the states and putting part of the Federal power in the hands of the House of Representatives, part in the Senate and part in the President's hands, all to act according to the Constitution with a Supreme Court to decide what was and what was not according to the Constitution and it is only by these various parts of our government doing the part that it was intended to do that our liberty can be kept safe. In this case the President and Senate are charged jointly with the duty of treaty making. Each is under moral obligations to use their best judgment for the benefit of the nation. To do otherwise would be to betray the people that elected them to office. Were they to submit to his judgment regardless of their own it would mean a long stride towards a dictatorship and we do not want a dictatorship no matter how fine the dictator might be, no, not if the dictator gave us a better government than we could have of ourselves. We want to keep our self-government, but unfortunately there has been a tendency to overstep the constitutional rights of the individual, to try to improve the general public condition and this tendency is especially strong in president Wilson. He insisted on telling us when to get in the morning and for a whim he tried to turn lose a flood of liquor on the country after the country had gone dry. Fortunately Congress dared to disagree with him and passed both measures over his veto and it is all wrong to condemn the Congress for not submitting to the president nor to conclude that it is political jealousy that caused the rejection of the league. Some of the strongest things said against the league and the president's attitude toward it came from his own party. But being in the white house with the large power that a president has he could crush opposition in his own party for they know that they could not win next November if he opposed them and so for political reasons opposition in his own party was stifled as they knew that from past experience he would try to crush all opposers, but he could not dictate to the Republicans to the same extent and so they spoke out freer. But it was the president that first tried to make political capital of the league question. The Republicans offered or compromised that the Democrats seemed about to agree to when Wilson sent them word that there must be no change and so he forced the question into politics and not the Republicans who would have been willing to keep it out, preferring no doubt to attack Wilson's dictatorial methods. Evidently Wilson did not care to fight on such grounds and so forced the league to the front to hide his weakest point. Not belonging to any party I have no political axe to grind, but I am in favor of full liberty for all to act according to their constitutional right and their own judgment and vote for what they think is best. In short I am opposed to Ivoryism just as much for the U. S. Senate as I am for Ivoryism for the state of Michigan. As to the merits of the league that is entirely a different question. Let the league be right or wrong we should use only fair means in the discussion of it.—*Francis G. Smith, Isabella County.*

It is perfectly natural that there should be widespread disagreement over League of Nations and the motives which have inspired some nations to sign it and others to reject it. For my part I find it hard to believe as is charged that the President of these United States would betray his country into the hands of selfish European nations. It is my personal conviction after an exhaustive study of the League document that the sovereignty of the United States is amply protected and that the League does offer an opportunity for making war a remote if not impossible thing. Some day we shall know the whole truth about the covenant. Until then we can only consult our individual common sense for guidance.—Editor.

BOY FOR AMENDMENT

I am a boy fifteen years old and if I were old enough would vote for the parochial amendment. I am at least old enough not to let the Catholics pull the wool over my eyes and would like to say Mrs. J. M. does know what goes on behind closed doors. Maybe some American Catholic are not taught Bolshevism, but thousands of foreigners are steeped in Catholicism and know no Americanism. Mrs. J. M. says she hates Bolshevism. That's funny for her own kith and kin in Ireland—the Sinn Feiners are worse than the Bolshevists and are causing all the trouble there. An ex-Catholic when asked if the priests told the people how to vote, replied, no, but said they told the people how they would vote and then the people knew what to expect. Last year the priests told the nunneries to vote against the prohibition amendment. Many Catholic people give every cent they can to the church instead of Liberty bonds or to some community advancement such as a Chatauqua or to help a consolidated school. Do you call this Americanism? Let F. H. Carpenter talk to them. He knows what he is talking about.—*A Subscriber, Grand Blanc, Mich.*

PROPOSED AMENDMENT WILL BE BURIED

When a person does a really good act I think it should be recognized, and I think you are deserving of much credit for your stand on the proposed school amendment to be voted on this fall as expressed in your editorial recently in M. B. F. It is gratifying to know that we have among us those who are able and willing to voice their sentiments against such measures and feel sure that your sentiments in this matter are the same as those of the larger majority of the voters of this state, and believe that the proposition will be buried so deep that it will not be ressurected for some time. You may rest assured that your editorial struck a lot of sympathetic chords and I personally wish to thank you. —*Hugh McMillan, Saginaw County.*

We live way out in the tall timber where we raise snow banks in winter and grasshoppers in summer, and don't have any neighbors, telephone, R. F. D. or roads, but I am enclosing a small "boost," its the best I can do, and perhaps is more at that than a lot of them who have neighbors, etc. Keep M. B. F. coming! It's the best farm paper in the U. S. Here's wishing us both success. —*Ed. G. Ball,, Alba, Mich.*

Tuck Your Hay Into Tight Bales

STACKED hay or hay in the mow does not represent hay at its best. Tuck your hay into snug, tight bales with an INTERNATIONAL HAY PRESS and get all of it under cover. And, too, your livestock will appreciate INTERNATIONAL-BALED hay because of its clean freshness and unimpaired food content. You can ship these snug, tight bales to the outside markets and command top prices. You can bale for your neighbors and make from $15 to $30 a day clear profit. You can bale straw just as well as hay—keep the outfit busy during odd weeks between seasons.

Your light tractor will furnish ample power to operate an INTERNATIONAL POWER PRESS. If you do not have separate power, a 6 h. p. FRICTION CLUTCH INTERNATIONAL KEROSENE ENGINE can be mounted on the front end of the frame of the two smaller size presses and belted direct to the baler—always ready for immediate service. The extra large drive gears compound the engine's power enormously—and make the snug, tight bales of uniform weight that are so characteristically INTERNATIONAL.

INTERNATIONAL HAY PRESSES are made in three sizes—14 x 18, 16 x 18 and 17 x 22—horse and power styles. See your nearby International dealer about one—and meanwhile let us mail you a catalog. Just send us a post-card.

Silo Can be Used All Year 'Round

THE SILO can be used for both winter and summer, or silage can be fed the year round in all seasons. By the summer silo we refer particularly to the supply of silage during the summer months. Silos as a rule, are bought with the idea of supplying winter feed. Silos are put up in the summer, filled in the fall, and generally before new grass comes every bit of silage is gone, and the dairymen especially notes at this time a severe shrinkage in milk flow. Profit in the dairy means supplying the animal with its requirement at all times, never allowing it to shrink through want of food. A shrink is unprofitable. It cannot be made up, and it is bad business. For this reason and many others the summer silo is rapidly gaining favor.

I recently heard a very well posted dairyman remark that if he had to choose between winter or summer silage feeding, he would prefer to go without the winter supply. This man had much experience in the business; he knew that the biggest damage to a dairy herd is generally produced during July and August when pastures become dry and short, flies are bad and conditions most unfavorable. The lure of the pasture is too great for the average cow-keeper. It is so easy to simply turn the cows on the pasture and forget them except, perhaps, on a Sunday once in a while when they are salted, or if they be milk cows when rounded up morning and night for milking. True there is a short season, especially in the corn belt, when pastures are exceptionally good. In May and June we generally find the grass tender and green and plentiful in quantity, but even during these months silage can be fed with profit to any class of cattle. During the early part of May the grass is more or less watery and lacks body and nutriment. Animals are often injured by the assumption that they are receiving all the green feed that they need. In June, as a rule, the grass is at is perfection, but July comes with a drought, flies become very numerous, weeds spring up in the grass and pasturage conditions, especially in the middle states, become poor. This is the time for the summer silo. With cows in a darkened barn and plenty of succulent silage, good records can be produced and that at little cost.

Land worth two hundred dollars or more an acre can hardly be made to pay dividends when put in pasture. If this be good tillable land it can be made to produce from six to eight times more feed by planting to corn and putting the corn in the silo. If we wish to make our acres earn, and that I believe is the desire of the best farmers we must consider carefully this pasture subject.

As time goes on silage will be used more and more for summer feeding. Experience has taught that it is economical and makes for large and economical production. It is the cheapest source of summer feeding, and it prevents the dairy herd from experiencing that fearful shrinkage which we note each year during the months of July and August. The feeder will learn that he can keep his animals in full flush and vigorous condition during a period when they are, as a rule, set back and made strippers and unprofitable winter producers. With the summer silo the small farmer living on forty or eighty acres can keep a good herd of cattle and do it with profit. The man who is attempting to farm too much land can find this method practical and much more profitable; he should sell half his land and farm the other half better. The summer silo is wise and intelligent feeding practice; it tends to build up the land and make acres earn a higher rate. Consider the subject carefully, you men who keep cattle on your farms; consult those who have had experience, and I venture to say you will come to the summer silo as thousands of others have done.—*A. L. Haecker.*

Ranchmen Raise Good Horses

S. T KIDDO, President of the Live Stock Exchange National Bank, Chicago, is farm raised, a son of one of Illinois' most noted Shire breeders. He has just returned from a trip thru the Black Hills of South Dakota and through Wyoming and Montana. Of horse breeding in those states, he says:

"My swing through the northwestern states has satisfied me that the shortage of foals, yearlings, and two-year olds is much greater than farmers realize. During the last three years, there has been but little horse breeding in the territory I visited, but ranchmen are now aware that it has been unduly neglected and are returning to the practice of breeding their mares in numbers formerly bred. They can raise splendid horses in the northwest wherever food supplies are sufficient.

"I visited Lee Simonsen's famous Padlock Ranch near Thermopolis, Wyoming, which is in my judgment, one of the best improved ranches in the Southwest, containing altogether about seventyfive thousand acres of land. Mr. Simonsen has used pure bred Percheron and Shire stallions for many years and his mares will average from thirteen to fifteen hundred pounds. They have been reared without any grain feed, but have some alfalfa through the winters. He had one particularly good pair of brown geldings, six years old, working on a camp wagon, and at my request, unhitched and weighed them. They were 3,390 pounds, right out of work, and were as well matched a pair of grade Shires as I have seen in a long time. Mr. Simonsen admits that if he and his neighbors had paid more attention to horse raising the last three years they would have been much better off.

"The demand for good draft horses is very strong right there in Wyoming for work on farms and oil fields. Mr. Simonsen tells me that the ranchmen are not only going back to breeding next season but that they are already beginning to look about for pure bred sires. He believes that a much better class of horses will be produced because of this discrimination in the selection of sires.

"As a banker, I was particularly interested in talking with men who have had experience with tractors and trucks on farms, and was absolutely confirmed in my own conviction that they are much more expensive in consideration of service rendered, than good draft horses. Many of the farmers have discarded them on this account.

"Farmers in the corn belt will profit if they buy three year old range bred mares which carry three or four crosses of draft blood. They usually stand 16 hands high and weigh 1,200 pounds and over. These mares are suitable for farm work and with right feeding in their fourth and fifth years, will grow stronger and heavier, greatly increasing in value. At the same time, it will permit the release of mature, hardened farm horses now on the corn belt farms at a good price for the present city demand. This will relieve the shortage of city drafters until increased breeding can bring on a new "crop" of the right type of horses.

"As a banker long associated with farmers, I know that good draft horses, reared in sufficient numbers to provide the farmer's own replacement needs, are one of the surest and safest investments in the world. Farmers cannot go wrong when they breed good type mares to high class draft stallions,—that's one thing sure."

SERIES OF HOLSTEIN SALES TO BE HELD IN OCTOBER

The Michigan Holstein-Friesian Association has already completed preliminary arrangements for a series of five sales to be held in October.

The first of the series will be the Michigan Holstein Breeders' Sale, which will be held at Jackson on Tuesday, October 19th. The first state sale occurred at the College at East Lansing last January, when

Big Bargains are constantly offered

seventy-three head brought $60,980, an average of a little more than $835 per head, and the same high standards will be required of entries for the fall sale. On account of bad weather conditions and attendant shipping risks in midwinter, this change in the date of the state sale seemed advisable, and the executive committee has decided to make it a semi-annual affair, occurring in May and October.

A series of local sales will be held in connection with the state sale, making five sales during the week at points within easy reach. These sales will be under management of the Michigan Holstein-Friesian Association. The state sale at Jackson, Tuesday, October 19th, will head the list, followed by sales at Lansing, Owosso, Howell, and one other point yet to be determined upon.

The local organizations are taking a keen interest in these sales and each organization will strive to put on the best sale of the series.

HOGS NEED PLENTY OF SHADE AND CLEAN WATER

Shade and clean water during the summer months are essential to successful pork production. All kinds of hogs must have shade. Too much direct sunlight and heat is a frequent cause of hogs failing to thrive and is often the cause of hogs dying. During July and August small pigs often blister on the backs and about the ears which causes, in some cases, severe infections and bad sores .

Expensive shelter is not necessary. Shade trees provide ample protection. Where no trees exist temporary shade may be provided by the covering of a frame with canvas, under which the hogs may go for protection. Some producers build individual hog houses with sides that may be lifted to provide an increased amount of shade during the summer months.

Clean fresh water for drinking and wallow is equally as important as, or more important than, shade. The old time wallow hole covered with scum which was once also the drinking fountain is no longer in favor with the successful hog feeder. Hogs must have water to drink, and if they cannot have fresh clean water in the trough or fountain, they will drink where they can find it, regardless of its condition. This fact has caused some to believe that hogs prefer nothing better, but they do and will demonstrate the fact when they are able to get fresh water from the well.

The clean wallow hole is also important. Hogs may use the muddy wallow if no other is available; but, again if the clean water is provided in a concrete wallow they will prefer it to the mud hole. Concrete wallows are not expensive accor— to the University of Missouri C lege of Agriculture, if constructed at odd times, when regular farm labor can be utilized. An excavation 6 x 8 feet, or larger, and about 14 inches deep walled and floored with concrete and filled with water will prove a profitable attractition to the hogs on hot summer days.

SWINE BREEDERS' PICNIC

The members of the Associations, families and friends held the first annual Poland China Picnic at Crystal Lake, Montcalm County, Mich. A very large gathering listened with intense eagerness to the masterly way in which Mr. M. M. Wiles of Kirklin, Ind., addressed the Association. He went over the situation as they are today and the future as it looks to the breeders. He used as his subject, "Michigan as a Hog State, Compared With Other States." He also brought out the point that our State is considered as a sand pile by many less informed, but on a survey will find land as good as is found in Ohio, Indiana, Illinois and Iowa in sections. Breeders were present who drove over 60 miles in order to be able to attend this picnic.

The Association has grown 100 per cent since its organization last spring. Much interest is shown by the Poland China Breeders all over the State. The first sale circuit ever held in Michigan will be pulled off in October, when five firms will sell registered Poland China hogs, all immuned from cholera. This will be an opportunity for the farmer as never before in our state, to attend several sales and purchase pure bred hogs at his own price, as they go on block to highest bidder. The purpose of the Ass'n is to educate the farmer to feed better bred hogs for market at less expense for feed, promote the public sales of Poland China hogs and for the advancement of the breed in our state.

Veterinary Department

SWELLING ON THROAT

I have a six year old cow with a soft flabby swelling on her throat extending down the under side of her jaw. It came about a month ago, disappeared and has come back again. There is a decrease in the flow of milk when this lump appears. She seems to be in good health, but not very heavy.—A Subscriber.

The swelling to which you refer is in connection with the glands and you must first cleanse the system out thoroughly. Give magnesium sulphate, lbs. two, powdered ginger and gention equal parts, one ounce, powdered capsicum, one dram. Dissolve the entire contents in two quarts of hot water and give slowly at one dose. After forty-eight hours give two drams of potassium Iodide dissolved in a little water three times a day. Keep up the potassium iodide treatment for at least two weeks, discontinue the treatment then for the same length of time and repeat if necessary.—*W. A. Ewalt, veterinary editor.*

PIGS HAVE MUSCULAR TUMOR

I have four pigs three months old, and two of them seem to be affected by a swelling in their legs, which seems to be more in bunches than a smooth swelling. It started first in their hind legs, but is now in all of them, and it seems difficult for them to stand up. They eat heartily but do not seem to grow like the other two. As yet the other pigs are not affected. They are in a large pen. Is there any danger of the disease spreading? What is it, and what can I do for it?—S. M., Riverdale, Mich.

Pigs are not often affected with muscular tumors, properly known as pigmented-moles yet a few cases have come to my observation. When interfered with develops into enormous size tumors. I have obtained fairly good results in the early stages by a complete change of food and surroundings. Keep all infected pigs away from those not affected. —*W. A. Ewalt, veterinary editor.*

COW GIVES BLOODY MILK

I have a cow that gives bloody milk. What can I do to cure her?—J. K. Saginaw County.

Give a good cathartic consisting of epsom salts, lbs. two. Powder ginger and gentian of each one ounce, powdered capsicum, one dram. Dissolve the entire contents in two quarts of hot water, let cool and give slowly at one dose. After 24 hours give two tablespoonfuls Soda Bicarb. morning and night for one week.—*W. A. Ewalt, petrinary editor.*

PIGS WITH PILES

I have some pigs with the piles and would like to know what to do for them. I have been giving milk and stock food. —L. D. C., Turner, Mich.

This condition among pigs is very unsatisfactory to treat. Try the following, after returning the protruded parts, place a stitch across externally to hold parts in place and apply the following ointment. Ungt. acidi tannici, one half ounce; Ungt. bellad. one half ounce; Ext. Opii, one half dram. Apply several times a day.—*W. A. Ewalt, veterinary editor.*

COW LEAKS HER MILK

Can anything be done for a cow that leaks her milk?—C. E. S. Glennie, Mich.

A cow that leaks her milk is a very unprofitable animal to keep on a farm and the sooner you get rid of her the better as nothing can be done to prevent it.—*W. A. Ewalt, veterinary editor.*

Supply and Demand

This year the Bell telephone system has required 75,000,000 pounds of copper; 10,000 tons of galvanized iron and steel wire; 12,000 tons of pole line hardware; 100,000,000 pounds of lead; 1,000,000 pounds of antimony; 700,000 pounds of tin; 10,000,000 pounds of sheet and rod brass; 15,000 tons of paper for directories; more than 24,000,000 feet of lumber; 12,000,000 feet of clay conduits; 10,000,000 glass insulators. These are only some of the chief requirements, only a part of the absolute essentials.

Suppliers of every item mentioned, as well as of scores of other items, have been compelled to withdraw promises of delivery, reject orders, refuse contracts and even shut down plants. The reasons are that they have been unable to secure materials for manufacture, fuel for power, or cars for shipments.

During the period in which the demand for new telephones has been greater than ever before, supplies have been more severely curtailed than at any time in the history of the Bell System. Special representatives have scoured the country; visiting mines, factories, laboratories, shipping points; and rushing goods forward.

The impressive conclusion is that, in the face of such conditions, the Bell System has actually gained on demand, and has exceeded all previous records putting in new telephones.

INCREASE THE EFFICIENCY of your DAIRY HERD by using a REGISTERED HOLSTEIN SIRE
We ha e bulls of all ages listed at reasonable prices.
Also grade and purebred cows and heifers
MICHIGAN HOLSTEIN-FRIESIAN ASSOCIATION
Old State Building Lansing, Mich.

A VERY HANDSOME AND STRAIGHT SON of a 21.60 lb. 2 yr. old daughter of Johan Hengerveld Lad, whose daughters are noted for their haughty and performance. Born March 25, 1920. Sired by a grandson of Bertjusca Pauline 3rd, 31.80 lbs. butter and 585.80 lbs. milk in 7 days. Price $175 delivered to your station. For extended pedigree address,
L. C. KETZLER
Flint, Mich.

BABY BULLS
Grow your own next herd sire. We have three beautiful youngsters—straight as a line, big-boned rugged fellows. They are all by our 38 lb senior sire, KING KORNDYKE ORISKANY PONTIAC from splendid individuals of A. R. backing and the best of blood lines.
Write for our sale list.
BOARDMAN FARMS
JACKSON, MICH.
Holstein Breeders Since 1906

WOLVERINE STOCK FARM REPORTS GOOD [illegible] in their herd. We are well pleased with the calves from our Junior Herd Sire "King Pontiac Lakeview Korndyke Segis" who is a son of "King of the Pontiacs" from a daughter of Pontiac Clothilde De Kol 2nd. A few bull calves for sale. T. W. Sprague, R 2, Battle Creek, Mich.

MUSOLFF BROS.' HOLSTEIN
We are now booking orders for young bulls from King Pieter Segis Lyons 170506. All from A. R. O. dams with credible records. We test annually for tuberculosis. Write for prices and further information.
Musolff Bros., South Lyons, Michigan

BACKE KRAST LINDENWOOD CHAMPION
Bull born March 13, 1919. Sire is a 27.33 lb. son of a 30.61 lb. bull, whose sire is Johanna Concordia Champion (30 A. R. O. daughters, 2 above 30 lbs.) Dam is an 18.93 lb. 2 year old daughter of Johanna Concordia Champion (see above) whose sire, Colantha Johanna Champion, has 61 A. R. O. daughters, 6 above 30 lbs. He is a big growthy fellow, ready for heavy service between 2-3 and 3-4 white and nicely marked. Guaranteed a sure breeder and especially priced at $200 if taken at once. Write for pedigree.
EDWARD B. BENSON & SONS
Hill Crest Farms, Munson, Mich.

a son of Flint Hengerveld Lad and Johan Pauline DeKol twice 30 lb. cow and dam of Pauline DeNijlander (Mich. Champion two years old.)
Bull calves from dams up to 28 pounds.
Roy E. Fickies, Chesaning, Mich.

A FOUNDATION
TWO REGISTERED HOLSTEIN HEIFERS
16 and 19 mos. old, sired by a 29 lb. and 27 lb. bull. Dam of older one a 14 lb. junior two year old, well bred, good individuals. Also a fine male calf from a son of the great King of the Pontiacs. Calf's dam a 20 lb. cow.
For particulars address
H. T. EVANS
Eau Claire, Mich.

TWO BULL CALVES
Registered Holstein-Friesian, sired by 39.87 lb. bull and from heavy producing young cows. These calves are very nice and will be priced cheap if sold soon.
HARRY T. TUBBS, Elwell, Mich.

MR MILK PRODUCER
Your problem is more MILK, more BUTTER, more PROFIT, per cow.
A son of Maplecrest Application Pontiac—132652—from our heavy-yearly-milking-good-butter-record dam will solve it.
Maplecrest Application Pontiac's dam made 35,103 lbs. butter in 7 days; 1344.3 lbs. butter and 23421.2 lbs. milk in 365 days.
He is one of the greatest long distance sires. His daughters and sons will prove it.
Write us for pedigree and prices on his sons.
Prices right and not too high for the average dairy farmer.
Pedigrees and prices on application.
R. Bruce McPherson, Howell, Mich.

OUR HERD SIRE
MODEL KING SEGIS GLISTA
His sire a 30 lb son of Lakeside King Segis Alban De Kol.

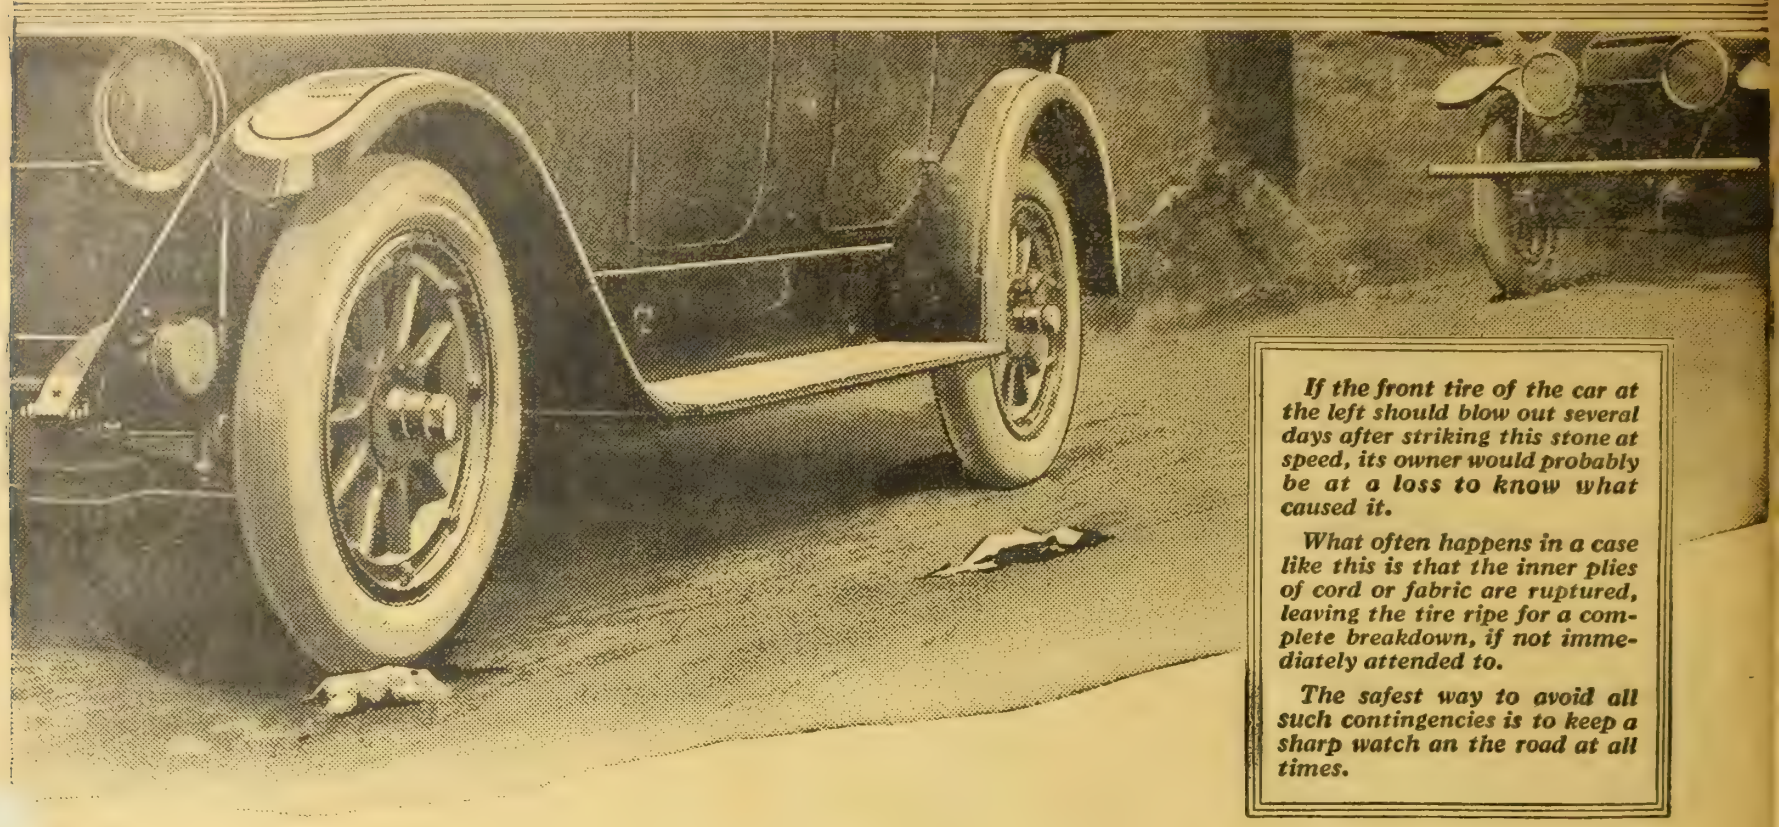
P. O. .....R. F. D. No.....

County .....State.....

If this is a renewal mark an X here ( ) and enclose the yellow address label from the front cover of this issue to avoid duplication.

Are Car Owners too Easily Satisfied with their Tires



If the front tire of the car at the left should blow out several days after striking this stone at speed, its owner would probably be at a loss to know what caused it.

What often happens in a case like this is that the inner plies of cord or fabric are ruptured, leaving the tire ripe for a complete breakdown, if not immediately attended to.

The safest way to avoid all such contingencies is to keep a sharp watch an the road at all times.

IN every community of any size there are two types of tire dealers—one who encourages his customers in their search for the best and one who tries to persuade them to be satisfied with what they have.

The first man is selling a service; the second, tires.

* * *

There are still too many motorists who meekly accept the blame for a tire that has worn out before its time.

They will listen while the dealer tells them of all the varying conditions that a tire has to undergo.

They will agree when he pictures them as lucky that they got what they did out of a tire.

Not one motorist in five has yet found out what a tire is really capable of—how much he really has a right to expect from his tires.

* * *

The great mass of motorists in this country are just beginning to wake up to the fact that you can't encourage waste and have economy at the same time.

They are beginning to find out for themselves what makes for economy in tires.

And they are going to the dealer who not only sells good tires to the man who insists upon them, but who *refuses to have anything but good tires* in his store.

* * *

From the beginning the whole weight of the United States Rubber Company—the largest rubber manufacturing concern in the world—has been thrown on the side of the *good* dealer.

Backing him first and last with all of its great and varied resources—greater and more far-reaching than those of any concern in the business.

And looking forward with confidence to the time when motorists *everywhere* will insist upon a higher standard of tire service.
